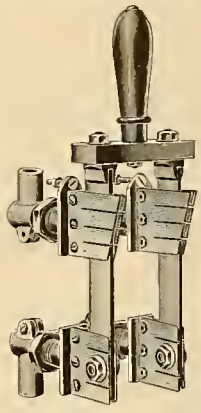
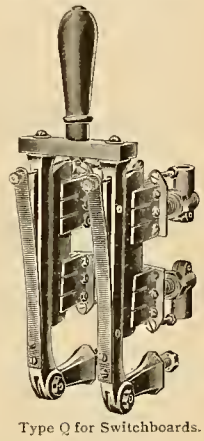
The demand for high grade knife switches has brought upon the market designs of various makers. Among the most recent are the type "E" and type "Q" manufactured by the Western Electric company, Chicago. The contacts of these switches are all rolled tempered copper, and the greatest care in construction and design has been observed in order that the switches shall carry their rated capacity in amperes without showing any heating of the parts. In placing and fastening the jaws in position, no solder is used, but the jaws are bolted to the metal plates or lugs, as can be seen from the illustrations. By this method the temper of the jaws is in no way injured and they will always grasp the blade of the switch with an equal and unvarying contact which will not deteriorate with time. The hinge contact is made in the same way and the bolt which passes through the hinge is provided with a lock nut, preventing any liability of loosening or poor contact at this point. The blades are of drawn copper, hand finished.

The base is extended for connections on back of board and is secured in place by a lock-nut. Swivel connections are provided which will admit of the circuit wires being brought into the switch from any direction. The switches are all made to gauge, and any repair part can be obtained and a damaged part replaced in a few moments.

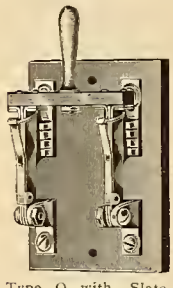
The type "E" is for station and switchboard work,



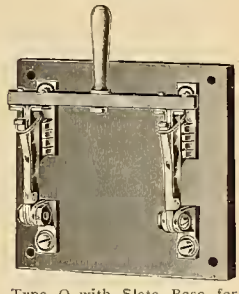
Type E for Switchboards.



Type Q for Switchboards.



Type Q with Slate Base for 110 Volts.



Type Q with Slate Base for 500 Volts.

THE WESTERN ELECTRIC KNIFE SWITCH.

being of the regular jaw pattern. The type "Q" is essentially the same as type "E," with the addition of a quick-break spring, and is especially approved by the underwriters for an entrance or service switch for motor work, constant potential arc or incandescent lighting.

Two cuts of quick-break switches mounted on slate bases are shown, one for a pressure up to 110 volts, the other for a pressure up to 500 volts.

An illustrated circular and price-list on "E" and "Q" switches has been issued by the Western Electric company, and a number of sizes are carried in stock.

Electric Cars on Indiana Avenue.

The electric cars are now running over that portion of Indiana avenue, Chicago, where there was such strenuous objection to them. Active work has been done by the employes of the Chicago City Railway company. In 10 days from the time the permit to build an electric road was granted, the company laid 13,580 feet of continuous track. It required two and one-half days to set the poles, and the five miles of wire was stretched in a day. On Saturday night the power was turned on, and at eight o'clock a car containing officers of the road made a trial trip, with G. W. Knox, electrical engineer, as motorman. The sound of the gong as the car moved along caused the people to stop, and at every cross street a crowd stood on the corners to watch the brilliantly lighted car pass, and from the windows of residences women and children viewed the invasion of the first electric car.

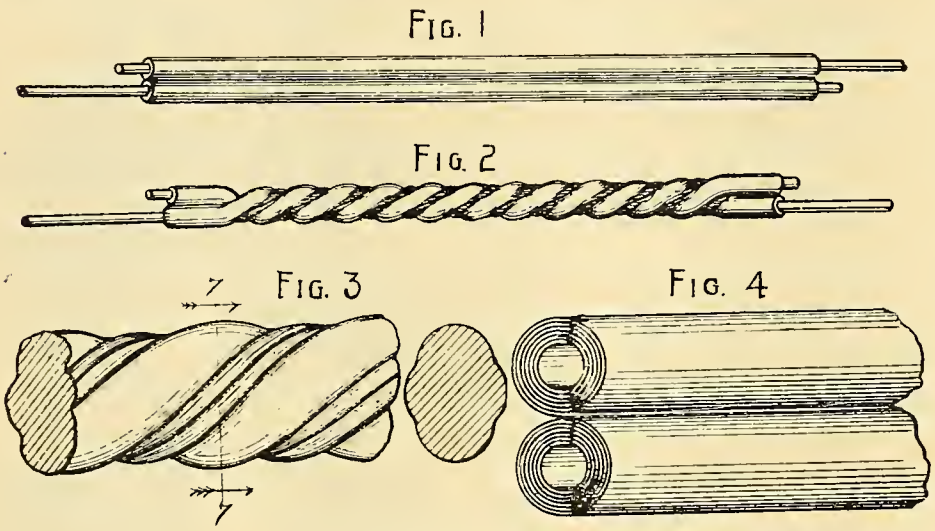
The American Solid Wire Joint.

The accompanying cuts illustrate a novel form of wire joint that was patented December 15, 1896, by Secretary and Treasurer Clarence E. Brown of the American Electric Fuse company, Chicago. This joint has been exploited by the American Electric Fuse company most energetically during the last year, and now that a patent has been secured covering the device, the American company proposes to push the joint more aggressively than before.

In order fully to appreciate the merits of this novel and ingenious wire joint a personal inspection will be necessary; but the accompanying cuts will give the reader a fairly clear idea of the underlying principles of its construction.

Heretofore joints have been made of tubes brazed or soldered together or one tube grooved or beat in various shapes, with perhaps perforations for the insertion of solder. But when either of these methods are used after a short time the joint may lose some of its tightness and become loose and admit air between the covering and connected wires, and corrosion may gradually take place, which action of course greatly impairs and reduces the conductivity and strength of the joint.

The object of Mr. Brown's invention is to provide a joint for connecting wires used for conveying electrical currents that will not allow the admission of air between the covering and connected wires and one that will not become loose by any ordinary usage to which a joint is subjected. His object is to prevent corrosion being caused by the admission of air, and further to provide a joint of great strength and conductivity.



THE AMERICAN SOLID WIRE JOINT.

The invention consists essentially of a double spirally wound sheet of metal foil, each spiral being wound in an opposite direction to the other, with space left in the center of each spiral for the insertion in opposite directions of the ends of the wires sought to be connected. The ends of this metal foil are then twisted in opposite directions by a special tool until the whole joint becomes, as it were, welded together into a solid joint.

Fig. 2 is a view of the joint after the wires are connected. Fig. 4 shows an enlarged side and end view of the joint, also how the metal foil is spirally wound in opposite directions. Fig. 1 is a view of the joint with the wires inserted in joint ready to be twisted together into solidity. Fig. 3 shows a longitudinal enlarged view of a section cut from the joint and an end view of the section cut from the joint after being twisted.

The American Electric Fuse company has sold already large quantities of this novel specialty, and the securing of its patent now places it in an enviable position, as the American joint has won for itself a host of firm friends.

The New Jersey Supreme Court has rendered a decision against the East Jersey Telegraph & Telephone company in the suits brought by Solon Humphreys and other owners of property in Bayonne to prevent the corporation from erecting poles and stringing wires along certain streets of that city without the consent of the owners of abutting property. The company proceeded with its work of construction under the provisions of an ordinance passed by the Bayonne Board of Councilmen. The Supreme Court's decision is based upon an opinion by Judge Depue, who maintains that the ordinance granting to the corporation its franchise is not in conformity with the Bayonne city charter, which requires the consent of property owners before impediments can be placed in front of their realty.

CORRESPONDENCE.

New York Notes.

NEW YORK, December 19.—New York is certainly not to be envied for its street railway facilities or prospects. We have thousands of antiquated horsecars, but we are too fastidious to permit of the erection of overhead trolley wires and poles. The cable has not proved a glittering success, and this week both the trolley conduit and compressed air systems are, figuratively speaking, decorated with black eyes. The severe snowstorm of Wednesday hampered the electric conduit lines on Lenox and Lexington avenues so seriously that traffic was very irregular and uncertain and for a time suspended. This was the day of triumph for the compressed air people, whose cars were successfuly operated during the storm. But alas! To-night comes the report that an accident happened to an air motor of the Lenox avenue line at One Hundred and Thirty-fourth street and Lenox avenue. The car was traveling at a moderate rate of speed when there came an explosion which was heard several blocks away. Part of the flooring of the car was blown up, some of it striking the top of the car. The car came to a sudden standstill. An examination showed that a tank underneath the car had exploded. It is believed that either the metal of the tank was defective or that the tank was subjected to too great a pressure. This accident will of course be used as a club by the opponents of the air motor system. Where we shall now turn we know not.

The *Sun* publishes a contribution from Herman Haupt upon the question of changing the motive power upon the surface roads of New York. The cable is dismissed from serious consideration because "its jerking motion is not only uncomfortable, but serious to delicate women, and causes accidents," and because of defects in the system, frequent break-downs under heavy loads in the busiest part of the day. Mr. Haupt does not seem favorably impressed by the trolley, and he enumerates many objections to the system, some of them being merely fanciful and others greatly exaggerated. He appears to be unfamiliar with the progress of recent years in electric railway practice. His advocacy of compressed air partakes of the nature of special pleading. Much is claimed for the system, but the single objection that the commercial practicability has not yet been demonstrated is overlooked.

Eight gas companies and six electric light companies submitted bids to the Gas Commission on the 15th for lighting the city during the year 1897. The bids for electric lights were as follows: Brush company, 774 lamps, at 40 cents per night each; Mount Morris, 519 at 40 cents each; Manhattan, 760 at 40 cents each, and 10 at 50 cents each; Harlem company, 66 at 40 cents, and 19 at 50 cents; Edison company, 201 at 50 cents, and 259 at 40 cents; North River company, 934 at 45 cents each.

In closing their annual report for the year ended December 1st, the Brooklyn Bridge trustees thus refer to the change in the motor power on the bridge railroad: "While confident that cable traction on the bridge railway is, as shown by its long and successful use, eminently reliable, economical, and safe, the trustees, feeling called upon to determine by test under service as to whether a better system of traction may not be had, have arranged for the installation of an electric traction plant, whereby trains may be switched at the station, and work therefor is now in hand. The trustees, after such a trial, decided to have the tracks at the stations provided with an electric system, whereby switching of trains at terminals could be done by electric motors, instead of by locomotives as heretofore, and subsequently to have the main tracks over the structure equipped so that when the running cable from any cause failed to haul a train in transit it could be reinforced by the electric motors. Contracts were entered into whereby 20 passenger cars were to be equipped each with four electric motors for propulsion; also for two steam engines and dynamos for the production of electric current, a battery of boilers to make the steam for these engines, and the several minor parts of the complete system were to be supplied. The undertaking as outlined is nearly complete; at the closing of this report 12 of these electric motor cars are finished, and trains for several days have been switched and run over the railway by them, the locomotives being dispensed with. The results so far obtained, from the short trials made, appear to be satisfactory." An engine breakdown in the Kent avenue power house of the Brooklyn Heights Railroad company caused a stoppage of the electric service on the bridge during the middle of the week. The fault was in no way that of the new equipment, and a similar accident will be almost impossible after the generating plant for the bridge is in operation. An electrically operated moving inclined plane, in lieu of a stairway, has just been put up on the south side of the New York terminal, as an experiment. The bridge authorities furnish the current, but are otherwise put to no expense unless the apparatus is successful.

The Spanish-American Light & Power company, which has an office at No. 113 Wall street and plants in Havana and Matanzas, Cuba, is in difficulties on account of the war in Cuba. It is a New York state corporation, incorporated in 1883 with a capital stock of $2,000,000, which has since been increased to $4,000,000 and represents a consolidation of five gas and electric light companies in Cuba. The company is said to have had a monopoly of the gas and electric lighting in Havana and Matanzas, and before the war broke out its gross earnings, it is claimed, reached about $1,000,000 a year. Since then the earnings have been considerably reduced, and the company is behind on its interest payment to bondholders. The trouble, it is said, is due to the unsettled condition of affairs in Cuba, and particularly because the city of Havana will not pay what it owes the company for light. The amount is said to be $300,000. The plants of the company in Havana are in operation without interruption, but its earnings have been greatly reduced, as many of the wealthy citizens have left the city, and payments are made to the company by its customers in paper money, which is at a considerable discount.

M. S.

Milwaukee, Wis.

MILWAUKEE, December 19.—Before he left Milwaukee for New Orleans, C. D. Wyman was tendered a farewell dinner by Charles F. Pfister, one of the directors of the Milwaukee company. The officers of the Milwaukee company speak of him in very high terms and say that they are very sorry indeed to have him leave them, although they admit that it was to his advantage to accept the New Orleans offer. He will receive a salary of $10,000 in his new position. The New Orleans Traction company, which exchanged its $500,000 of stock in the New Orleans Lighting company for half of the power plant which furnished the current for the street car system, will add a 1,000 horse power engine, with boilers and generators, to the plant, and with these improvements and Mr. Wyman's efforts it is expected to improve the street car service of the Crescent City, about which there has been much complaint of late.

The Milwaukee Electric Railway & Lighting company is considering the advisability of consolidating the Wells street and Lake Park lines, which would make a line running from the extreme western limits of the city to the extreme northeast corner of the city. These are the two most "aristocratic" lines in the city, and more transfers are issued between them than between any other two lines in the city. More than 75 per cent. of the transfer tickets issued by the conductors of either line are for the other line. Some time ago General Manager Wyman recommended that a block of track be laid between Wisconsin and Mason streets, on Jackson street, which would connect the Lake Park and Wells street lines more advantageously than they could be connected

at any other point. The objections to the change are the decrease in the service to the Northwestern railroad depot and the cost of putting in curved tracks on Wisconsin street, which is paved with asphalt. The bills which the company paid recently for laying the two curves at Third street and Grand avenue aggregated $2,258. The company, it is learned, will next spring convert the Whitefish Bay dummy line into an electric branch, and should the Wells street and Lake Park car lines be consolidated some of the cars running over it will continue right on out to Whitefish Bay. The company will also probably extend the Clybourn street line to Calvary Cemetery and the Soldiers' Home, and it will very likely extend the Fond du Lac avenue line out to North Milwaukee. The proposed improvements in the power house and elsewhere will also be made in the spring.

The Milwaukee, Racine & Kenosha Railway company is about prepared to run cars between Racine and Milwaukee, or would be were it not for the injunctional proceedings instituted by the Chicago & Northwestern Railway company, which objects to the inter-urban electric railway's crossing its tracks near the county line. The tracks are laid from Racine to South Milwaukee and the poles are up and the wiring done. Already the company has run a car over five miles of the road. The crossing suit has come up in court several times and each time has been continued. The Northwestern company, it appears, wants the electric railway company to build a viaduct over its tracks or a tunnel under them, so as to avoid the danger incident to a grade crossing. The company will probably adopt the latter course. Between South Milwaukee and Milwaukee the Racine company will use the new tracks of the Milwaukee Electric Railway & Lighting company, and the latter company is being prevented by a misunderstanding about a small part of the right of way from completing its South Milwaukee extension. The cars built for the interurban line are 64 feet long, with double trucks, and each car is provided with two 50 horse power Walker motors, which will enable it to attain a speed of 35 miles an hour. It is understood that the present railroad rates between the two cities will be cut in half by the new line.

A peculiar suit has been brought against the Milwaukee Electric Railway & Lighting company. William H. Laughlin and Henry Wood, who keep a saloon on North avenue, allege that they received a large amount of patronage from the employes of the street railway company until the company ordered its men to keep aloof from the saloon. The saloonkeepers declare that this was a boycott and they demand $50,000 damages from the company. Thomas E. Mitten, assistant superintendent of the company's system, is accused of discharging a man who disobeyed the order and is made a defendant to the suit.

The limit fixed by the last Legislature for providing all street cars in the state with vestibules, for the protection of the motormen, has expired. The Milwaukee Electric Railway & Lighting company has complied with the law by providing all of its cars, except a few "extras," with vestibules.

Motormen cannot run into Milwaukee policemen with impunity. A few days ago, while a detail of blue-coats was marching down Wisconsin street under command of a roundsman, a Russell avenue car, operated by Frank Lockwood, bore down upon them. The motorman rang the bell, but the policemen were under orders not to break ranks, and they did not try to get out of its way until they saw that it was almost on top of them. Two of them were struck by the car. In the police court Lockwood was fined $25 and costs, amounting in all to $31.32, for assault and battery.

A Chestnut street car almost plunged into an open draw a few days ago. The motorman had stopped within 50 feet of the bridge, as required by law, but received the signal from the conductor to go ahead, which he did. He suddenly noticed that the bridge was moving and he stopped the car within three feet of the open draw. The motorman states that he did not hear the bridge bell owing to the noise made by his car and that it was so dark that he could see only a few yards ahead. All the street car conductors have since received orders to go ahead to the bridge after their cars stop and signal if everything is all right, just as they do at steam railway crossings. C.

The Milwaukee Electric Railway & Lighting company has bought another rival lighting plant, has gobbled another suburban line and has made a number of important changes in its subordinate officers. The directors of the company held their annual meeting in Milwaukee during the present week. The first thing that they did was to consider improvements in the street railway department. They virtually decided to rebuild and straighten the Whitefish Bay dummy line and to equip it with electricity. The improvements at the power house will include additional boilers, a fireproof addition in which to place them, and two more generator, for use in case of accident to the other generators. Elevated iron bunkers will be used to feed coal to the furnaces under the boilers, and the most effective smoke-consuming apparatus that can be obtained will be put in. The electric lighting company that the company purchased is the Pabst establishment on Broadway, which is a model of its kind. The Pabst Brewing company found that the plant was being operated at a loss, and as it was foreign to the business of the brewery, it was decided to sell it. Negotiations for the sale of the plant to the street railway company have been in progress a year. The price paid for the plant was about $500,000, and part of the amount is said to have been paid in bonds of the reorganized street railway company. The Pabst plant, established primarily to light and heat the Pabst buildings, has a capacity of 15,000 incandescent lamps. The transfer includes the building and real estate, the machinery, conduits, good will and franchises. A contract has been made by which the street railway company will light the Pabst buildings for a term of years at a certain stipulated price. The owners of the street railway, to handle the Pabst plant and its business, have incorporated the Milwaukee Light, Heat & Traction company, with a paid-up capital of $500,000, and with authority to increase the capital in order to raise money with which to make necessary improvements. William Nelson Cromwell of New York is president of the new company, Henry C. Payne vice-president, C. A. Spofford secretary and George R. Sheldon treasurer. They are the officers of the Milwaukee Electric Railway & Lighting company, and both companies have the same board of directors. The street railway company now has a capacity of 33,000 incandescent lamps. The Badger plant, one of its branches, has a capacity of 1,650 arc lamps, which is practically the limit of the company's arc lamp capacity. The Pabst power house is two blocks from the river and therefore the expense of hauling fuel to it is considerable. On this account the plant will probably be abandoned, so far as the manufacture of power is concerned, but several stories will soon be added to it for use as the general offices of the company. The building is admirably located, for this purpose and the first floor can be used for the display of electric lighting fixtures. The street railway people have also bought the Milwaukee & Wauwatosa Rapid Transit line, an electric road which has been operated in connection with the city lines. Captain Pabst was the principal owner of the Wauwatosa line, which is two miles long, and with it the street railway company acquires the incandescent lighting plant at Wauwatosa, which has a capacity of 5,000 lamps.

The annual meeting of the street railway directors did not result in verification of the report that Henry C. Payne, who seems to be slated for a place in McKinley's cabinet, would retire at once from the street railway management, for Mr. Payne remains vice-president of the company. He will, of course, cease active work in the company's interest if he actually enters the cabinet, but until he goes to Washington there will be no change so far as he is concerned. The directors may not elect a general manager in place of C. D. Wyman, now in New Orleans, until next spring. But they have created the positions of superintendent of the railway department and superintendent of the lighting department. Thomas E. Mitten has been appointed general superintendent of the railway department. He came here from Denver a few years ago, and up to the present time has been assistant superintendent. The former superintendent, George M. Kuemmerlein, has been appointed superintendent of traffic and is subordinate to Mr. Mitten. A similar change has been made in the lighting department, W. L. Church, who was assistant superintendent of the lighting department under the old system, being made general superintendent, while S. G. Coleman, formerly superintendent, becomes assistant to the general superintendent of his department. W. L. Mason becomes comptroller as well as auditor, and his duties are correspondingly increased. H. F. Boggis, who was the nominal secretary and actual cashier of the Badger plant, becomes cashier of both the lighting and railway departments of the company. George O. Wheatcroft remains assistant treasurer of the company, O. M. Rau chief electrician and W. H. Crawford chief engineer. A. W. Lyno is still superintendent of construction, with "maintenance of way" added to his title, while E. W. Oulds has been appointed to the new position of superintendent of maintenance of rolling stock, being subordinate to Mr. Lynn. C.

Washington, D. C.

WASHINGTON, D. C., December 19, 1896.—The transmission of electricity for power and lighting purposes from Niagara Falls to Buffalo having been demonstrated to be a practical success, a movement has been started here to have the government acquire water rights at Great Falls, a few miles from Washington, said to be the largest falls in the country excepting only Niagara, so far as the volume of water involved is concerned. A bill is now before Congress authorizing the acquisition of whatever rights at the falls that the government does not own, with a view to the establishment of a municipal light plant in this city.

Charles J. Bell of this city, who was selected as the chairman of the inaugural committee, has been prominently identified with electrical interests. He is a cousin of Prof. Alexander Graham Bell, and went abroad in the interest of the American Bell Telephone company in 1880. As general manager of the National Telephone company of England he opened telephone exchanges in that country.

A new railway scheme is on foot. A bill has been introduced in Congress to incorporate the Washington & Gettysburg Railway company. The incorporators are prominent business men and capitalists of this city and Maryland and New York. The bill authorizes the corporation to construct, equip and operate with an overhead trolley system, or other approved motive power, a street railway for passenger traffic and small freight in this city and the District of Columbia and in the Gettysburg National Cemetery. Permission to run through Maryland and Virginia will be sought from the legislatures of those states.

The Chesapeake Beach Railway company has sought permission to enter this city.

Street railway corporations evidently consider this city and the adjacent territory a Mecca, judging from the numerous projects on foot to gain entrance into Washington or the extension of existing facilities therein. The Capital Traction company already has an electric line to the National "Zoo," and the Metropolitan company also desires to reach that point. The Columbia company seeks an eastern extension. The Washington, Arlington & Falls Church company also asks permission to cover more territory. A movement is on foot to combine all the completed and projected lines in Howard, Montgomery and Prince George's counties, Md., all of which lead into this city or connect with lines entering the capital. The work on the Columbia & Maryland electric railway between Washington and Hyattsville is being rapidly pushed to completion.

For several years the Chesapeake & Potomac Telephone company has enjoyed a monopoly in this city, but that will probably be curtailed in the near future. There are three other companies that are seeking permission of Congress to operate in this city. At least one of them will, in all likelihood, be allowed to do so.

The sum of $65,000 has been asked to pay for the electric lighting plant in the new city postoffice.

The extensions to the electric lighting system in the capitol, made last summer and autumn, cost $35,608.20. T. I. P.

Portland, Oregon.

PORTLAND, December 15.—Under the supervision of E. Cannon, president of the Northwest Electric Engineering company of this city, electrical apparatus was installed during November for Oregon state institutions as follows: Deaf Mute School, complete lighting plant of 300 lights, Edison dynamo and Atlas automatic engine; Reform School and Cottage Farm, duplicate lighting plants, and 35 station telephone plant in main buildings of Insane Asylum, connecting main buildings and wings with office, with complete switchboard attachments; also telephone plant at Cottage Farm, connecting all cottages to main building. These two telephone plants give the Insane Asylum and their farm complete connection with both branches, although the farm is located six miles from the main buildings.

All electric roads in Portland were blockaded for two days, owing to snow and sleet. Unprepared for this unusual weather, the companies were unable to cope with the elements. November was the most severe known in this section; the last 10 days were regular Illinois weather—something heretofore unknown hereabouts. W. O. F.

Northwestern Notations.

MINNEAPOLIS, December 19.—At a meeting of the Engineers' club of Minneapolis, City Engineer F. W. Cappelen presented a lot of statistics in regard to the lighting of cities by electricity. It was a compilation and condensation from the reports secured from 171 cities by a special committee of the American Society of Municipal Improvements, of which Mr. Cappelen is a member. Several engineers from St. Paul were present, and there was some general discussion of the subject. These statistics showed that, with one unimportant exception, Minneapolis is paying higher rates for its electric lighting than any city in the country. This has stirred people up considerably, and the fact that the city is crying for economy helps the commotion along. The city is not under contract with the local company. A reduction of rates is demanded.

Reports of wholesale reductions of force and cuts in wages by the Twin City Rapid Transit company have called out an official denial from President Lowry. He says that only the usual changes at this time of year have been made and no general cut in wages.

F. A. Noyes of Portland, Me., representing the bondholders, purchased the property and franchise of the Eau Claire (Wis.) Street Railway, Light & Power company at the receiver's sale. The price bid was $20,000. The plant will probably be improved.

Citizens of Springfield, Minn., voted to put in a steam plant to run the electric lights if the cost does not exceed $3,000.

The electric light plant at Hastings, Minn., was burned November 18th, with a loss of $12,000. It was insured for $7,500 and is being rebuilt.

The Fort Wayne Electric corporation secured the contract for the electric light plant at the State School for the Deaf at Delevan, Wis. Its bid was $1,860.

An interurban street car line connecting Duluth and Superior will be established as soon as the new bridge is completed.

There is talk of a municipal electric light plant at Grand Forks, N. D. The Gas & Electric company has submitted a proposition for substituting electric for gas lights on certain streets and wants a 10-year contract.

Portz Bros. and J. B. Hahn are considering establishing an electric light plant at Hartford, Wis.

The cars of the Brainerd, Minn., street railway line will be taken off until next April unless the employes are willing to operate the line for the gross receipts, which they will hardly be willing to do.

The city of Oconto, Wis., has employed an engineer to prepare plans and specifications for an electric lighting plant. The present company refused the offer to purchase, hence this action.

The United States court has issued an injunction restraining the city of Bismarck, N. D., from interfering with Edmund A. Hughes in the construction and operation of an electric light plant in that city, and further declaring an ordinance passed by the council which repealed a former ordinance granting Hughes a franchise null and void. Hughes was given a franchise by the council several years ago and had purchased some materials when the council repealed the franchise. He attempted to continue the construction of the plant, but was stopped by the city authorities, and finally took the matter into court.

The city of St. Paul has brought suit against the North American Telegraph company to have its franchise, which was granted to the National Subway company, declared forfeited. The National Subway company was to have laid two miles of subway in a year and laid two rows of subways, on the same street, one mile in length. The city claims that this does not come within the franchise.

The electric light plant at Black River Falls, Wis., was sold on a mortgage to R. C. Foster of Cleveland, who secured the contract for street lighting for $1,120.

The man who secured the contract for electric lighting at Emmetsburg, Ia., cannot raise funds to put in the plant.

A thirst for electrical knowledge led Roy and Bert Jennings of Minneapolis to commit burglary. One of the boys is an enthusiast on electricity and has read everything the public library affords on the subject. Noticing some books on the subject in a book store he became extremely desirous of securing them, and, with his brother, broke into the store and took the books home to read. There were other articles of greater value there, but nothing else was taken. The proprietor of the book store, when he learned the circumstances, decided not to prosecute. C.

PERSONAL.

Henry D. Stanley, who represents Day's Kerite, was a recent Chicago visitor.

D. W. Barnes, who has been connected with the C & C Electric company of New York for eight years, lately as superintendent of the factory, has been appointed general manager. Mr. Barnes is eminently fitted to fill this position from the long practical experience he has had in the electrical business. His many friends will be pleased to hear of his progress, and wish him continued success.

Chas. A. Harding, the energetic lieutenant of Purchasing Agent Charles Holmes of the Chicago Edison company, recently met with a distressing accident that incapacitated him for business for a number of days. Mr. Harding's misfortune was a peculiar one; he injured his foot by treading on a pin-cushion full of needles. Although very painful, no very serious damage was done. Mr. Harding is again at his post, although still quite lame.

E. W. Hammer, who has been identified with the Cutler-Hammer Manufacturing company since its formation, has disposed of his interest in that corporation, and on January 1st, will retire from its management. "It is my intention to take a long and much needed rest, with the expectation, however, of continuing permanently in the same branch of the electrical business," said Mr. Hammer. There is no doubt that this recreation is deserved, and it is hoped that Mr. Hammer will thoroughly enjoy it. His friends agree that his retirement from the electrical business will be of short duration.

W. L. Church, who has been connected with the Milwaukee Electric Railway & Lighting company about a year, has been advanced to the position of superintendent of the lighting department of that company in the changes resulting from General Manager Wyman's retirement. Mr. Church is amply able to fill the position with credit to himself and to the satisfaction of the company. He is a graduate of the Massachusetts Institute of Technology and has had years of practical experience in managing central stations. In Chicago he was long superintendent of the plant of the Chicago Edison company, and his services were of great value in the trying times of the earlier days. His friends in Chicago and elsewhere will wish him the largest measure of success.

David Leonard Barnes, a well-known civil engineer of Chicago, died in New York last week. Mr. Barnes was born in Smithfield, R. I., August 23, 1858. He was graduated in civil engineering from the Massachusetts Institute of Technology and by Brown University. In 1879 he became connected with the Hinckley Locomotive works, and in 1882 and 1883 he was chief draftsman of the Rhode Island Locomotive works. Since 1887 Mr. Barnes had been a consulting engineer, with offices in New York and Chicago, giving especial attention to railroad and kindred subjects. He was, during the period of its construction, consulting engineer for the Alley "L," and recently has been consulting engineer in the combination of the Baldwin Locomotive Works and the Westinghouse Electric & Manufacturing company, and his greatest contributions to engineering science have been rendered in that capacity. He was mechanical editor of the *Railroad Gazette*, member of the American Society of Civil Engineers, Mechanical Engineers' association, the English Institute of Civil Engineers and the American Association for the Advancement of Science. He was an associate member of the Master Car and Master Mechanics' associations and other railroad and engineering societies. In social life he was a member of the Union League club of Chicago, the Manufacturers' club of Philadelphia and the Engineers' club of New York. He was the author of numerous papers on scientific subjects and of a book on "Compound Locomotives." Mr. Barnes was married in April, 1896, in Chicago, to Miss Ida S. Irwin, eldest daughter of Colonel B. J. D. Irwin of the United States Army. Besides his wife, his mother, Mrs. A. N. Barnes, his sisters, Mrs. George Stuart and Mrs. Fitz William Sargent, and one brother, Charles J. Barnes, all residents of Chicago, survive him.

ELECTRIC LIGHTING.

The important commission of designing a new plant for the United States Electric Lighting company of Washington, D. C., has been given to Sargent & Lundy, the Chicago electrical and mechanical engineers. This company intends to improve its service by erecting an entirely new station and equipment, to take advantage of recent advances in economy and efficiency, rather than attempt to remodel the old one. It is reported that $300,000 will be expended for this purpose.

ELECTRIC RAILWAYS.

It is stated that the commissioners in control of the Illinois & Michigan canal contemplated a grant of the use of the tow-path to capitalists who proposed to build an electric railway from Joliet to La Salle—a distance of over 50 miles. The project was in indefinite shape, and the daily press reports that there was much opposition to it. The right of way along the canal is level and will need scarcely any grading. It is free from obstructions, and is thought to be worth thousands of dollars for railroad use. But the main objection, was that the road would practically destroy the utility of the waterway, the path intended for mules and horses being given up to a railroad. Attorney-general Moloney has, it is said, rendered an opinion that the grant is in direct violation of the legislative act which created the canal. The law provides that there shall be reserved on either side of the canal a strip of land 90 feet wide, which shall be held for the sole use of the canal. After conferring with Governor Altgeld the commissioners rescinded their action.

A street railway company has been formed to construct and operate a line, nine miles in length, connecting the present systems in Framingham and Marlboro, Mass., running through Southboro, capitalized at $100,000. The company will be known as the Framingham, Southboro & Marlboro Street Railway company, and the directors are S. H. Howe of Marlboro, F. D. Newton and C. B. Sawin of Southboro, J. R. Entwistle of Framingham, W. B. Ferguson of Malden, C. E. Barnes of Plymouth and C. E. Dresser of Leominster.

TELEPHONE.

A dispatch from South Bend, Ind., states that a bitter fight has been made against the Citizens' Telephone company by several leading manufacturers, who have repeatedly tried to secure the council's action favoring the return of the Bell instruments to the police and fire stations, from which they have been removed. The controversy has just resulted in a third decisive victory for the Citizens' company.

A. F. Cutter, secretary of the Iowa Telephone company and manager for Iowa of the lines operated by the Bell company, is arranging for a direct telephone connection with New York and Boston over a separate long-distance wire. This will be built to Sioux City first, and then to Minneapolis and St. Paul. "The line from New York is completed west as far as Davenport," says Mr. Cutter, "and it works perfectly. Starting from Davenport, the line will be built straight to the west, with a branch to the north to Sioux City and to the south to Omaha." Mr. Cutter said there was no doubt about this line being completed this year. A long-distance line to Kansas City will be completed almost as quickly as the line from Boston and New York.

MISCELLANEOUS.

A proposal for supplying the Hauraki gold-fields in New Zealand with electric power is now under discussion. The generating power is to be obtained from the Huka Falls of the Waikato River, near Lake Taupo, distant about 80 miles from Te Aroha, on the southern fringe of the gold-mining area, and about 160 miles from the outermost point of the gold area at Cape Colville. The power would be transmitted over a rugged mountain region. The water that passes over the Huka Falls is said to be in volume equal to all probable requirements. It is proposed that the work shall be undertaken by the government.

Consolidated first mortgage 5 per cent. bonds will be issued by the Toledo Traction company to the extent of $2,800,000. The company owns and operates all the street railways in the city of Toledo, comprising about 120 miles of single track, and through the Toledo Consolidated Electric company and the Western Electric Light & Power company, controls practically all the electric lighting, public and private, and power business. The earnings of the railway companies forming the Toledo Traction company and the electric light companies for the year ended June 30th, were, gross, $910,414; net, after deducting taxes and all other charges, $342,921. It is estimated that the gross earnings for the coming year will exceed $1,000,000, and with the consolidation of the properties, and with the railway and electric lighting operated from the new and complete central power station, the net earnings are expected to exceed $450,000, or nearly double the annual interest charges.

TRADE NEWS.

M. D. Weil & Co. of 725 Broadway, New York, are making a specialty of exporting electrical appliances.

The Ashton Valve company of Boston is sending its friends in the trade a very handsome calendar for 1897.

The Wisconsin Electrical Construction company of Milwaukee is having an excellent trade. The company has a number of large contracts on hand which keep its full force working incessantly. In supplies also an unusual demand is being made upon its large stock by consumers throughout the Northwest.

The Julius Andrae Sons company, Milwaukee, seems to be as busy as ever. The company appears to control a large slice of the trade in Wisconsin and the neighboring states, due, no doubt, to the standing it has gained as the pioneer electrical house in Milwaukee. The Andrae brothers are preparing for a large trade the coming year.

The Northwest Engineering company of St. Paul has secured the contract for the electrical equipment for the new Northern Pacific office building in that city. The latest appliances will be used throughout for lighting, and all offices and heads of departments will be connected by a complete telephone exchange system, with connections to the yards and Minneapolis.

The Gibbs Electric company of Milwaukee has been for some months located in a large and commodious factory, where it has excellent facilities for the manufacture of dynamos and motors. The company has more orders on hand than it can readily fill, and consequently its force is taxed to the utmost. William P. Harper of St. Paul has just been appointed manager of the company, and has taken the active direction of the

company's affairs. Mr. Harper until recently was manager of the Northwestern Wheel & Foundry company and was previously connected with large manufacturing institutions. He is an able, energetic gentleman of great ability and enjoys the acquaintance of a large circle of friends. It is confidently expected that, with the aid of Mr. Harper's invaluable services, the Gibbs company's facilities will soon be inadequate to the demand for its machines.

Under the happy title, "The Light of Experience," the Manhattan General Construction company of 44 Broad street, New York, and 753 Monadnock block, Chicago, has issued a very artistic catalogue, which handsomely illustrates and clearly describes the Manhattan incandescent arc lamps. Lamp users will be benefited and pleased by the possession of a copy of this truly beautiful work.

A recent contract closed by the Wagner Electric Manufacturing company of St. Louis is not unnaturally considered very significant by E. H. Abadie, the manager of the sales department; and the reason for his satisfaction is shown by the following details: On September 15th the Lachine Rapids Hydraulic & Land company of Montreal submitted specifications for transformers to the prominent manufacturers of electrical transformers both in the United States and abroad. Its electrical engineer is Cary T. Hutchinson, and the principal points of the specifications were that at the maximum load the 30 kilowatt transformer should have an efficiency of 97 per cent.; not less than 96 per cent. from one-half to 1¼ load; not less than 80 per cent. at one-tenth load; total drop at full load, two per cent. The insulation to be guaranteed to withstand successfully a test of 25,000 volts alternating current, continued as long as desired and repeated at arbitrary intervals. The tests required to ascertain the efficiency of the transformers were to be made in the factory of the maker, under the direction of Mr. Hutchinson. The Wagner company not only tendered a bid on these specifications as submitted by the Lachine Rapids people, but furnished in addition specifications of a more efficient transformer, showing that at one-tenth load an efficiency of 92 per cent. would be guaranteed, 12 per cent. better as compared with 80 per cent.; and at 100 per cent. load, 97 6/10 per cent.; while at 1¼ and ¾ load an efficiency of 97 3/10 per cent. was guaranteed, with a regulation of 1¾ per cent. As the amount of the order was upward of 900 kilowatt capacity, the $10,000 contract secured by the Wagner company is also taken to show that upon equal specifications its transformers are the cheapest. The company guarantees "the sufficiency and proper working of the said transformers for a period of two years from the erection thereof and to repair any damage thereto or defects therein save and except damage resulting from lightning and mechanical injury, and in the event of any of said transformers being found defective or insufficient during the said term the said contractors will replace the same with others of the quality, size and efficiency hereinbefore stipulated."

The Hunt Air Brake company, having works at New Kensington, Pa., is making many improvements, and the many orders and inquiries received and the flattering testimonials given show that patrons are satisfied with the effort to place upon the market air brakes for any service in connection with electric, elevated or cable roads. In order to promptly fill the orders the company has recently given an order for 64 motors. The company claims to have the best air pump and three-way valve in connection with its apparatus, and, with fair voltage, the pressure has been raised from zero to 70 pounds within two minutes—an important factor, when taken into consideration that a sufficient pressure of air is stored almost instantly in the resevoir when the trolley is applied to the line, and were the trolley to jump from the line after being on only a moment, sufficient air would be stored to allow the motorman to make a large number of stops. Among the noted recent additions and improvements may be specially mentioned the use of aluminum in the manufacture of the air brake equipment. The weight has been very materially reduced, making the apparatus now, in its present form, accessible to be carried upon the platform of almost any well constructed car. This metal has been brought to a point where it is now possible to use it for the construction of the brake castings. All parts of the apparatus are composed of aluminum, other than the pump and motor castings. Another improvement and addition is a small compound combined pump motor brake, being a special design for short cars and which can be carried under the seat or under the car. This apparatus is also manufactured of aluminum other than such parts as are required to be of brass and iron, and therefore is very light and occupies a space 32 inches long, 14 inches high and 12 inches in width. Both of these combined motor brakes are controlled by the new, recently completed automatic controller which occupies a space 14 inches by 7¾ inches by 3½ inches. By this device the pump is absolutely automatically controlled, the maximum pressure being, say, set at 70 pounds and the minimum pressure being at 40 pounds, allowing a variance of 30 pounds between the cut-in and the cut-out of the pump. Should the trolley jump from the line the pump is automatically stopped and when again adjusted is started. The motorman has no care of the apparatus; he simply handles the air by the three-way valve; which is directly in front of him in making the stops. To avoid any possibility of an accident coming to the equipment by excess current, etc., the Hunt company has provided a "Midget" cut-out manufactured by the Cutter Electric company, by which the excess current is discharged, and every possible precaution has been carefully provided for, to protect the apparatus and to insure to the purchaser a perfect and reliable air brake.

BUSINESS.

Goltz & Sinclair, Milwaukee, are making no complaint of the amount of work with which customers have favored them. They have been quite busy since election and are now installing a number of lighting plants in and around Milwaukee.

The Electric Protection company of Philadelphia gives notice that on and after January 1, 1897, A. L. Fenton's connection with the company will cease, and that Chas. D. Shain, 136 Liberty street, New York city, will be the sales agent for the states of New York, Connecticut and that part of New Jersey north of Trenton.

The convenience and value of the Kinsman electric desk lamp is growing on the public, to judge by the sales reported by the Metropolitan Electric company of Chicago, the western agent. The lamp is so constructed that it can be easily attached, and it will not interfere with the opening or closing of roll-top desks, while it lights perfectly every part of the desk.

An electrical specialty of unusual merit, which is receiving wide attention, is the Espersen revolving lamp-shade, manufactured by the Pacific Electric company of La Crosse, Wis. It is made in various styles and sizes, and is adapted to all conditions. It is receiving the highest praise from users all over the country. Those who desire to save their eyesight would do well to communicate with the Pacific company, which will be pleased to mail a beautifully illustrated catalogue on receipt of request.

The Central Electric company, Chicago, western agent for the Wagner Electric Manufacturing company, is doing most excellent work in the line of selling the Wagner product. With the Central Electric company's large line of steady customers it is not to be wondered at that it has been successful with the Wagner transformers. With the high reputation of these goods, backed by the energy of the Central Electric company and its well-known facilities for handling electrical goods, it becomes a comparatively easy task to do a good business.

Whether Dixon made graphite famous or graphite did a like service for Dixon, the fact is that now the two are so inevitably associated in the public mind that the mention of the name of the man immediately brings the thought of the product. This is very fortunate for the Joseph Dixon Crucible company of Jersey City, N. J., which is world-famed for its graphite productions, and, although old in years, keeps to the forefront in modern business methods. A handsome descriptive pamphlet is sent to those who desire to know of the use of graphite as a lubricant and for other purposes.

One of the best illustrations of gradually but surely returning "good times" and a high compliment to careful, conservative and successful management, is a recent move made by the Phœnix Carbon Manufacturing company of St. Louis. At the annual meeting of the company in St. Louis on December 8th a detailed report for 1896 was presented, and proved so highly satisfactory that the board of directors authorized Superintendent S. G. Booker immediately to purchase property adjoining present factory site in South St. Louis for the erection of an extensive addition to the present plant. This plat measures 150 feet front on De Kalb street by 313 feet on North Trudeau street and has been already purchased.

The degree of success attained with enclosed arc lamps is largely dependent upon the carbon used, and it has been a difficult matter to find a carbon exactly suited to that work. Manufacturers of enclosed arc lamps are, it is said, rapidly coming to the conclusion that the Electra high grade Nuernberg carbon is the proper one to use, and such manufacturers are recommending the use of Electra carbons with their lamps. So great has been the demand for Electra carbons for enclosed arc lamps that it has been impossible during the last few months to import them fast enough. The Electric Appliance company reports a splendid business with these goods, and states that all of its customers are more than pleased with them.

The electrical trade in general will be interested to know that the Commercial Electrical Supply company of St. Louis has recently been appointed agent for interior conduit. The Commercial company is most energetically pushing its business, and the growth of the business is most gratifying to the management. President Joseph Franklin, Jr., visited Chicago last week, but returned to St. Louis Saturday evening. Manager Paul D. Cable of the sales department reports a most gratifying increase in the company's business since the election. It is a noticeable fact that the company had to increase its office force, which was already large. This company is evidently determined to have a large share of the southwestern business, and its intelligent and aggressive efforts in this direction have already met with a success that would indicate that the Commercial company's friends are rapidly on the increase.

A man who promises to become identified with many of the greatest electrical installations throughout the Northwest is A. M. Patitz, consulting electrical and mechanical engineer, Milwaukee. Mr. Patitz was for over five years chief draughtsman of the Chicago, Milwaukee & St. Paul Railroad company, and also had charge of most of the installations made by that company, besides designing all new machinery, etc. A few months ago he decided to branch out for himself and opened an office in the Pabst building. Owing to the numerous friends aware of his abilities in designing and construction work, Mr. Patitz had no difficulty in securing his share of business, and at the present time he is superintending the installation of a number of plants, among them the Germania building, in which the electrical equipment will consist of 22 motors and three large generators. All who know Mr. Patitz speak highly of his ability as an engineer.

The Hunt Air Brake company has now in successful operation axle-connected brakes on the following-named roads: Cleveland & Elyria, Akron, Bedford & Cleveland, Pottsville electric railway, Norfolk & Ocean View, Binghamton electric railway. Orders are now being filled for combined motor brakes for Norfolk & Ocean View, Cleveland & Elyria, Elyria & Loraine, Mt. Clemens Fast Line, Saginaw & Bay City, Akron, Bedford & Cleveland. The company has also just equipped with their trail brake the new cars of the Wilkesbarre & Northern railroad, and has also orders for brakes on its books for roads in Pittsburg, Buffalo and points in the East and West; and inquiries are being received daily from foreign roads for descriptive matter of the brakes. Some roads are furnished with the combined motor pump for use in power houses for cleaning purposes; this apparatus can be so arranged upon wheels that it can be carried around the plant and connected up with the current at points most convenient for the work required, and, by the use of hose connections, the air can be supplied for cleaning, in spaces where the cleaning could not otherwise be done.

In the last issue of the WESTERN ELECTRICIAN was illustrated the new rheostats manufactured by the American Rheostat company of Milwaukee, which have been on the market for some months. While this rheostat is comparatively new, it is claimed to have stood every test and seems to have given the best of satisfaction to all who have used it. It has a number of important features not possessed by other makes of rheostats, and the rapidity with which the American rheostat has come into favor is remarkable. It is now being used in nearly every state in the union and bids fair to command a large share of the trade. The marked success of so young a company is due to the character of the apparatus and to the men who are financially and otherwise interested in it, among them being some of Milwaukee's best-known business men. No small share of the credit for the growth of the concern is due to Frank R. Bacon, vice-president and business manager, a member of the firm of E. P. Bacon & Co., grain merchants, who are well known all over the country. The company has a number of times been obliged to increase its working force to keep up with the increasing demand for its output. Kohler Brothers, who know everybody and whom everyone knows, are the Chicago agents of the company.

ILLUSTRATED ELECTRICAL PATENT RECORD.

Issued December 15, 1896.

572,945. Mechanical Telegraph Sounder. William W. Alexander, Kansas City, Mo., and Manceillia C. Gillham, Kansas City, Kan. Application filed April 23, 1894.

A mechanical telegraph signaling instrument is described, consisting of an electro-magnet, its armature, an oscillating lever connected therewith, a retractile spring attached to the lever, adjustable stops on the opposite side of the lever, a pivot shaft for the lever, hooked arms secured to the shaft and a pivoted arm to engage with the arms, pallets and a crank upon the pivot shaft of the arm, a springy connecting rod uniting the crank with a pivoted sounder-lever, pivoted arms to engage alternately with the pallets on the shaft, a coiled spring mounted upon the pivot shaft of the arms, and having one end connected to a pinion, with means to rotate the pinion.

573,009. Direct Current Dynamo-electric Generator. Benjamin G. Lamme, Pittsburg, Pa. Application filed March 11, 1896.

A parallel wound armature for multipolar direct current machines is one of the features. It is provided with alternating current connections between points in its winding of normally equal potential through which leading and lagging currents may be transmitted to equalize the magnetic circuits of the machine.

573,021. Electric Meter. William D. Marks, Philadelphia, Pa. Application filed October 20, 1896.

In an electric meter there is the combination with a controlling amperemeter, of means for automatically tapping the amperemeter.

573,033. Electric Railway System. Byron E. Osborn, Auburn, N. Y. Application filed April 10, 1896.

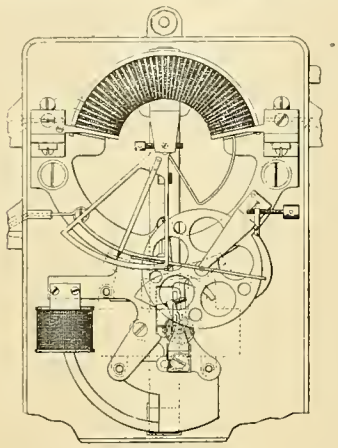
The combination is claimed of a moving vehicle, a concealed conductor for the passage of the main current, a conductor for conveying the main current to the vehicle, independently movable connecting pieces for connecting said conductors, electro-magnets for operating the connecting pieces, additional electro-magnets for governing the operation of the former electro-magnets, and means carried by the vehicle for controlling the operation of the additional electro-magnets.

573,041. Electric Furnace. Martin Schindler, Neuhausen, Switzerland. Application filed April 23, 1896.

In apparatus for melting or fusing by electricity a holder is provided for the positive electrode, consisting of a clamp composed of two independent sections, each provided with a half-seat or bearing for the electrode, and with a continuous circulating channel or passage having inlet and outlet, and bolts for clamping the sections together.

573,042. Electric Boiling Apparatus. Friedrich W. Schindler-Jenny, Kennelbach, Austria-Hungary. Application filed February 27, 1894. Patented in Austria-Hungary August 22, 1891; in Switzerland August 29, 1891; in France September 3, 1891; in Belgium September 4, 1891; in England October 2, 1891, and in Italy December 31, 1891.

The device comprises a hollow ring or annular watertight body, a base of insulating material therein, one or more electric conductors secured to the base, a handle, and a brace connecting the handle and annular body, the electric conductors passing through the brace and handle.



NO. 573,021.

573,066. Electric Railway Construction. George Westinghouse, Pittsburg, Pa. Application filed June 8, 1896.

A structure for surface contact electric railways is described, comprising a switch-box, a beam provided with contact supporting devices and extending laterally from the switch-box beneath both track rails, and means for clamping both the switch-box and the beam to the track rails.

573,078. Wattmeter. Thomas Duncan, Fort Wayne, Ind. Application filed April 29, 1896.

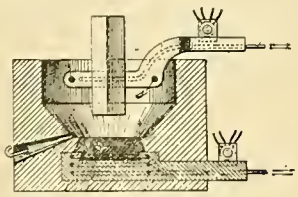
One feature is the combination with the armature and with a field magnet, of a shunt core enlarged at one end, and a shunt coil wound upon the smaller end thereof.

573,079. Meter for Measuring Electric Currents. Thomas Duncan, Fort Wayne, Ind. Application filed May 7, 1896.

The combination is claimed with the spindle and the magnets which it supports, and with the surrounding paramagnetic ring, of the jewel-post in which the spindle is stepped, and the supporting bar for the post secured beneath and to the ring and diametrically thereof.

573,080. Electric Meter. Thomas Duncan, Fort Wayne, Ind. Application filed July 22, 1896.

A disk armature comprises a plurality of sector or segment wound coils lying flatwise in the disk, with their arcs toward the periphery thereof, in combination with sector or segment wound series coils laid parallel with the plane of the disk, with their arcs overlying the arcs of the armature coils.



NO. 573,041.

573,082. Electric Meter. Carl Erben, Berlin, Germany. Application filed October 10, 1895. Patented in Germany June 21, 1892; in Austria-Hungary November 6, 1893; in England November 9, 1893; in France November 11, 1893; in Belgium November 13, 1893, and in Switzerland February 21, 1894.

An oscillatory balance-spring and a clock-work with a counter-spring connected to its outer end magnets are employed, and means for causing the magnets to control the arc of oscillation of the counter-spring.

573,088. Electric Sign. Frederick H. Hawkins, New York, N. Y. Application filed January 13, 1896.

A luminous sign comprising a vacuum chamber has a transparent face, a filament or plurality of filaments of carbon or other suitable material arranged in the chamber, and adapted to be electrically connected with an electric generator and shaped to form a letter, figure or symbol, and a corresponding letter, figure or symbol formed on a background in rear of the filament letter, figure or symbol.

573,092. Insulator. Fred M. Locke, Victor, N. Y. Application filed August 24, 1896.

There are two members, the outer one composed of insulating material puncturable by an electric current, and an inner member of less puncturable insulating material within the other, and provided with a suitable recess to receive an insulator support.

573,101. Wall Insulator. James J. O'Neill, Boston, Mass. Application filed December 19, 1895.

A tapering member is provided with a lug forming a stop, and the curved or hooked insulated member extends from the first member intermediate of its ends.

573,105. Collecting Brush. Edward B Raymond, Schenectady, N. Y. Application filed August 5, 1896.

A collecting brush for a dynamo-electric machine is composed of a core of conducting material and a layer of insulating material upon the outside of the core.

573,107. Securing Field Magnet Poles. Henry G Reist, Schenectady, N. Y. Application filed August 24, 1896.

There is the combination with a revolving field magnet structure, of pole-pieces separated from each other and arranged on the periphery of the field magnet structure, the pole-pieces being composed of laminated material, and being dovetailed into the periphery of the revolving structure, and means for taking up the play of the parts.

573,117. Telephone Circuit Line Signal. Thomas C. Wales, Jr., and Chester H. Arnold, Boston, Mass. Application filed July 20, 1896.

A telephone circuit is provided with a call-signal, a signaling current generator furnishing current therefor, a secondary line signal in a local circuit, and a polarized electro-magnetic device in inductive relation with the circuit of the generator controlling the secondary signal.

573,130. Attaching Field Magnet Poles. Francis O. Blackwell, Schenectady, N. Y. Application filed August 24, 1896.

Laminated pole-pieces are separated from each other, and arranged and located in sockets on the periphery of the revoluble field magnet structure, with registering notches in the lower end of the pole-pieces in the sockets, and keys located in the registering notches securing the pole-pieces to the periphery of the revoluble structure.

573,162. Electric Arc Lamp. Charles Richter and Richard T. Eschler, Camden, N. J. Application filed April 9, 1896.

A clutch is formed with a leaf; a roller is mounted on the leaf, an elastic arm on the leaf and a roller on the arm.

573,169. Electric Railway. Anson Sprague, San Leandro, Cal. Application filed March 30, 1896.

A channeled insulated surface rail has a conductor fixed to it; a pivotally secured lever has a trolley to engage the conductor; there is a lever by which the trolley lever is carried, and a slide connected with the latter lever and adapted to move the trolley into and out of contact with the conductor.

573,176. Electric Cable. Francois Borel, Cortaillod, Switzerland. Application filed January 7, 1896.

The improvement described consists in a conductor of copper, an inclosing tube of copper, and intervening asbestos forming the insulating material, such asbestos not being injured by heat, and not injuring the conductor in the rolling or drawing operations.

573,221. Electric Signaling Apparatus. Felix B. Herzog and Schuyler S. Wheeler, New York, N. Y. Application filed January 25, 1886.

Two or more separately variable transmitting mechanisms are employed, each including a motor, together with shifting devices.

573,222. Automatic Grounding Device for Electric Conductors. George A. Jewett, Chicago, Ill. Application filed December 6, 1895.

A contact device embraces a stationary and a movable part, the stationary part comprising two contact-plates insulated from each other and connected one with the conductor and the other with the ground, and the movable part consisting of a tongue adapted to enter between the plates, and a hood also attached to the conductor and surrounding the tongue.

573,233. Process of Precipitating Precious Metals from Their Alkali Cyanide Solutions. Max Netto, Almazarron, Spain. Application filed March 16, 1896.

Silver and gold are precipitated from their alkali cyanide solutions by acidulating the alkali cyanide solution containing the metals by hydrochloric acid, so as to precipitate silver chloride, separating the precipitated silver chloride by filtration from the solution, and subjecting the acid filtrate to the action of an electric current, so as to deposit the gold on the cathode.

573,234. Electric Railway. Andrew C. O'Connor, Lynn, Mass. Application filed October 26, 1895.

Positive and negative wires are arranged over a track, and rods are extended across the track for supporting the wires; arms are mounted to swing on the rods, but insulated therefrom; there are also roller contacts on the free ends of the arms, permanent electrical connections between the rods and wires, forked standards mounted on a car, bars supported on the standards but insulated therefrom, and connections between the bars and a motor on the car.

573,245. Electric Soldering Club. Paul Stotz, Stuttgart, Germany, and Friedrich W. Schindler-Jenny, Kennelbach, Austria-Hungary. Application filed January 14, 1895. Patented in England September 8, 1894; in France October 10, 1894; in Sweden October 12, 1894; in Belgium October 15, 1894; in Switzerland October 17, 1894; in Hungary November 9, 1894; in Austria November 23, 1894; in Germany November 28, 1894, and in Italy December 31, 1894.

The invention comprises the casing, containing an insulating heat-body and conducting wire, a soldering member or head separable from the casing, the casing and head fitting one partially within the other, a cover to the casing, and clamps adapted to draw the cover and head to their respective places and secure them therein.

573,257. Trolley Pole Safety Device. Börre H. Börreson, Minneapolis, Minn. Application filed July 26, 1895.

The combination with a trolley-pole, of a tension device therefor having a base or anchor part which is movable with respect to the trolley-pole, and a combined trip and setting device for the movable base or anchor part, comprising a pair of levers that are locked to set the tension device under strain by engagement with each other at a point to one side of the dead-center of the levers, and are tripped by the direct contact therewith of parts that are rigid with the trolley-pole.

573,294. Telephone Transmitter. Forest A. Ray, Boston, Mass. Application filed April 6, 1896.

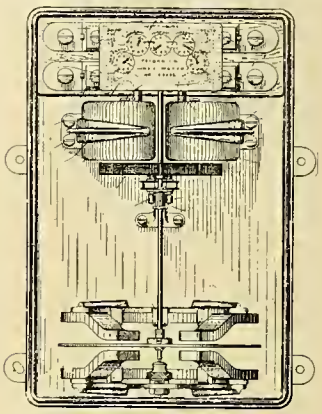
A fixed annular ring and a vibratory plate non-contiguous to and concentric within the ring are combined with a plurality of flexible links which interconnect the edges of the plate with the ring.

573,302. Conductor of Electricity and Conduit for Holding Same. Alexander Selkirk, Albany, N. Y. Application filed January 30, 1896.

In a portable close-walled conduit having end-closing pieces which are suitably perforated for receiving a terminal portion of an electric conductor contained within the conduit and extending from end to end thereof, the combination with the perforated end-closing pieces of the terminal portions of such an electric conductor passed through the perforations, and having their outer ends turned against the outer side of each end-closing piece.

573,323. Armature Jack. William A Drysdale, Overbrook, Pa. Application filed August 22, 1896.

One claim is given: In an armature jack a member provided with openings, bars fitted to respective openings, as



NO. 573,080.

to one extremity, and provided with a screw-thread upon the other extremity, a member freely mounted for longitudinal movement in said member, and provided with a threaded end socket, a screw-thread upon said member, and a running nut fitted to said thread.

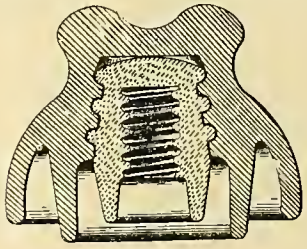
573,344. Switch for Electric Railways. Shadrach A. Mustein, Rincon, N. Mex. Application filed June 22, 1896.

A section of trolley wire is carried by posts, there being one section of trolley wire on each side of the movable rail and in position parallel with the rail; means of operating the sliding bars, and stops to limit the lateral movement of the trolley wire sections.

573,350. Station Indicator for Railways. Andres Pálfy, Budapest, Austria-Hungary. Application filed August 3, 1896.

There is the combination with a revolving disk carrying an indicating plate, of means for rotating the disk intermittently, a conducting surface carried by the disk, a series of sliding contact-points located thereon, a contact-point adapted to make electrical connection with the conducting surface on the disk, a contact-point adjacent to the disk and adapted to be engaged by the sliding contact-points when the same are shifted, and an electric circuit having a signal bell therein and extending from the contact in connection with the conductor upon the disk to the contact adjacent to the disk.

573,355. Apparatus for Purifying and Decolorizing Saccharine or Other Liquids. Marshall Pridham, Philadelphia, Pa. Application filed September 12, 1896.



NO. 573,092.

In an apparatus for purifying saccharine or other liquids a tank is provided for holding the liquid to be treated; plates forming positive and negative electrodes are placed within the tank and connected to a suitable source of electricity, and collecting racks in the bottom of the tank collect the impurities precipitated from the liquid.

573,356. Telephone Transmitter. Leon W. Pullen, Camden, N. J. Application filed November 11, 1895.

Two or more opposing electrodes are yieldingly connected together in such manner as to form a cavity or chamber between them, and an insulating ring extends into the cavity or chamber between the electrodes.

573,387. Combination Gas and Electric Fixture. James E. Brown and William M. Brown, Toledo, Ohio. Application filed July 20, 1896.

A fixture is suspended and supported by means independent of the service pipe, and an insulated coupling is interposed between the fixture and the service pipe.

573,398. Electric Arc Lamp. August C. Dobrick, Chicago, Ill. Application filed June 13, 1896.

In an electric arc lamp clutch there is the combination with the clutch-rod, of the clutch collar, a pair of spaced convergently disposed bearing wires or pins fitted within the collar at opposite points, and the clutch-lever having a clutch-face disposed opposite the convergently disposed bearing wires or pins.

WESTON Electrical Instrument Co.,

114-120 William St., NEWARK, N. J., U. S. A.

Weston "Round Pattern" Ammeter, Type F.

We desire to call attention to a line of cheap but excellent Switchboard Instruments for Direct Current Circuits, which we designate as

"Round Pattern," Style F.

These Instruments are particularly suitable for Isolated Plants and Feeder Circuits in Railway and Power Plants. Voltmeters in ranges from 3 to 750 volts. Ammeters in ranges from 1 to 2,500 amp. All Weston Instruments are unsurpassed in excellence of workmanship, in accuracy and economy of operation.

Mention the WESTERN ELECTRICIAN when writing for catalogues.

The NORTHERN ELECTRICAL MFG. CO.,

MADISON, WIS.,

MANUFACTURERS OF

MOTORS and DYNAMOS.

Our machines will operate SUSPENDED from CEILING OVERHEAD or BOLTED DIRECT to SIDE WALL as readily as when occupying floor space in the ordinary manner. All bearings self oiling. See our new patented device for CONNECTING MOTORS DIRECT TO LINE SHAFT, SAVING BELTS, PULLEYS AND FLOOR SPACE.

Aetna Railway Insulators, Anderson Line Material,

Manufactured solely by ALBERT & J. M. ANDERSON, 289 to 293 A Street, Boston, Mass.

Correspondence Solicited.

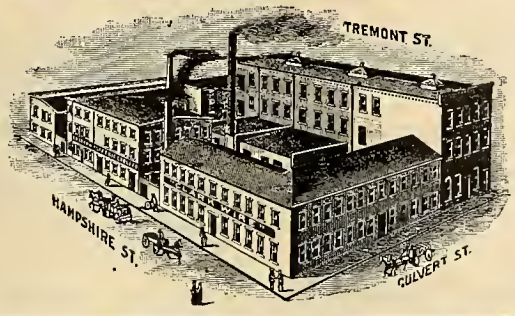
THE

"CLARK" WIRE.

"CLARK WIRE" TRADE MARK.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.



In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

Eastern Electric Cable Co.,

ELECTRICIAN PUB. CO.,

CHICAGO.

DOMESTIC

Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

SOLD ON... THEIR MERITS.

In placing this instrument on the market we take pleasure in stating that after a series of tests made by one of the largest railroad corporations in the United States, and by several of the best informed Telephone Experts in the country, we have been informed that our instruments far surpass any telephone now on the market, for the following reasons:

Simplicity in Construction;

Impossibility of Packing under any Conditions;

Sensitiveness and Clearness of Articulation.

Least Affected by Induction of any Instrument now on the market.

Indestructibility—Will Last a Lifetime with ordinary care, and will be as effective after 5 years' use as the day they were set up.

A Test of this instrument will prove every claim we have made for it, and we simply ask a trial to convince the buyer.

We furnish the Transmitter Arm to those who may wish to replace the transmitters on other makes of instruments.

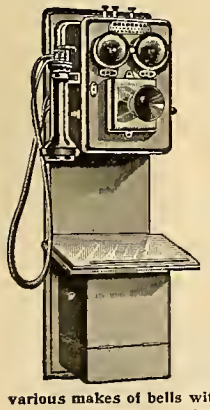
KEYSTONE TELEPHONE CO., PITTSBURGH, PA.

Standard Telephone and Electric Co.



MADISON - - WISCONSIN,

MANUFACTURERS OF THE

Standard Loud-Speaking, Long-Distance and Exchange Telephone.

Perfect in Detail, of Highest Efficiency and Best Possible Electrical and Mechanical Construction.

Equipped with **Our New Magneto Bell** provided with specially powerful Generator having large field magnets of best quality of magnetic steel, laminated armatures with ample wire space, and combining the qualities of large quantity and high voltage; polarized bells with centrally pivoted armatures (the patent on same having now expired) and high co-efficient of self-induction in proportion to winding, the whole adapted to meet the most exacting requirements of service.

Will ring bells on long lines of high resistance. Will ring a large number of bells in series on short lines. Will ring on a line various makes of bells with different windings. Will work with any make of switchboard. Will drop a shutter on long lines, etc., etc.

Sole Licensees for sale of **Milde Battery Transmitter** in the United States. Patent granted April 17th, 1894. For simplicity, small dimensions, entire multi-contact, and powerful transmission, it has no equal. No adjustment required. Will not pack or get out of order.

Standard Telephone Exchange Switchboards

Manufactured and controlled by us are the most rapid and efficient apparatus of the kind now before the public, embracing novel and original features possessed by no others; require where power generator is used but three moves to answer a subscriber's call, ring number wanted, and connect the lines. Estimates for complete equipment of exchanges and toll line systems promptly furnished.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

Low Excursion Rates to Buffalo, N. Y. Via the Baltimore & Ohio R. R.

On July 5 and 6 the Baltimore & Ohio Railroad will sell excursion tickets to Buffalo, N. Y., at rate of one fare for the round trip, plus $2.00, for membership fee, account National Educational Association Meeting. Tickets will be good for return until July 12, inclusive, but are subject to an extension until September 1, if deposited with Joint Agent of Buffalo Terminal Lines at Buffalo on or before July 10, 1896.

For further information call on or address L. S. Allen, Ass't Gen'l Pass'r Agent, Chicago, Ill.

Half Rates to Washington, D. C. Via the Baltimore & Ohio R. R.

On July 4, 5, 6 and 7 the Baltimore & Ohio Railroad will sell excursion tickets to Washington, D. C., at a rate of one fare for the round trip, account of Young People's Society of Christian Endeavor Convention.

Tickets will be good for return until July 15, but are subject to an extension until July 31, provided they are deposited with Joint Agent at Washington, D. C., prior to 6 o'clock p. m., July 14.

For further information call on or address L. S. Allen, Ass't Gen'l Pass'r Agent, Chicago, Ill.

Progress the Order of the Age.

THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half gate than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-in. Wheel—July 9, '94.

	Head	Rev. per Min.	Cu. Ft. per Sec.	H. P.	Per Cent.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationery Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

Badt, Lieut. P. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 6 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 50 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.60

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to $0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways, Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2,50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter I. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos, G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised ..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations $3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

Hospitalier, E.—Domestic Electricity for Amateurs. Translated from the French. With additions by C. J. Wharton. With illustrations $2.50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations $5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition.....$3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated.$0.50
[Vol. 96 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather $1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations.....$2.50

Lockwood, T. D.—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

Lockwood, T. D.—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1.00

Meadowcroft, W. H.—The A. B. C. of Electricity. 36 Illustrations.....$0.50

Martin, T. C.—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition $4.00

Martin, T. C. and Wetzler, J.—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations $3.00

Maver, and Davis, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations $1.50

McClure, J. B.—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc..$1.00

REWIRED WITH RAVEN WHITE CORE WIRE

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY.

CHICAGO, April 30, 1896.
NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

GRIMSHAW WHITE CORE. Used exclusively for all Incandescent Lighting at World's Columbian Exposition.

RAVEN WHITE CORE. Used in some of the largest buildings in the United States.

COMPETITION LINE WIRE. Used by some of the largest Central Stations and Fire and Police Departments in the U.S.

GRIMSHAW TAPES, COMPETITION TAPES AND SPLICING COMPOUNDS.

ELECTRIC LAMP SIGNS....

NEW ERA IN ELECTRIC ADVERTISING.

Each lamp is a single letter, which greatly simplifies the construction of a sign, and permits an unlimited advertising display. This sign is low-priced, economical of operation, easily read, very conspicuous, and may be changed in a moment from one form of words to another.
We manufacture High Grade Incandescent Lamps. Lamps of any voltage furnished.

Ask your NEAREST SUPPLY HOUSE for Sample or write

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY, - - - Suite 510 Marquette Building, Chicago, Ill.

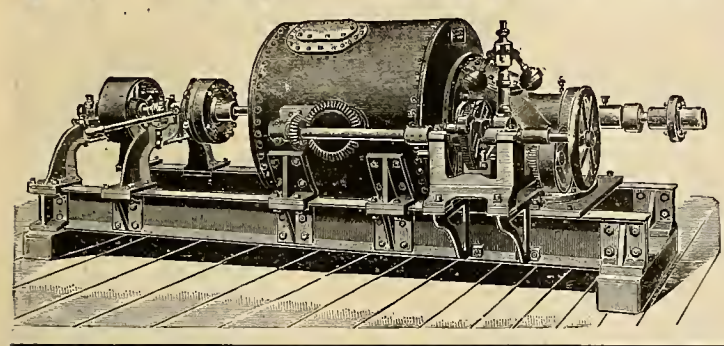
Victor Turbine Water Wheel.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter**, being **double the power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of usetul effect **guaranteed.**

SEND FOR CATALOGUE AND PARTICULARS.

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 38 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts, and where the situation admits of their use we recommend them.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

The Electric Motor and Its Applications.

BY T. C. MARTIN AND JOSEPH WETZLER.

THIRD EDITION.

With an Appendix by Dr. Louis Bell, bringing the book down to date.

Cloth, 315 large quarto pages, 353 Illustrations. Price, $3.00.

The wealth of information contained in the three hundred and odd large double-column pages of this important work is equaled in few special technical treatises, even those of a professedly exhaustive character. More than one hundred different motors are described and illustrated—many in great detail—and the different applications are similarly fully treated. Many of the illustrations are full page, and the details of construction, particularly of armatures, are fully illustrated. The treatment is simple, clear and concise, and little mathematics is employed, the work being essentially of a practical and largely of a descriptive character. The section on alternating motors resumes in a simple manner without mathematical formulæ, the principles upon which they are based, and that on thermo-magnetic motors treats this interesting class in greater detail than can be found in any other publication. An interesting feature is the historical method of treatment, by means of which the different steps in the advance of theories and design can be clearly traced, and the varying results of explorations in many directions instructively followed.

CONTENTS.

Chapter I. Elementary Considerations.—Chapter II. Early Motors and Experiments in Europe.—Chapter III. Early Motors and Experiments in America.—Chapter IV. The Electrical Transmission of Power.—Chapter V. The Modern Electric Railway and Tramway in Europe.—Chapter VI. The Modern Electric Railway and Street-car Line in American.—Chapter VII. The Use of Storage Batteries with Electric Motors for Street Railways.—Chapter VIII. The Industrial Application of Electric Motors in Europe.—Chapter IX. The Industrial Application of Electric Motors in America.—Chapter X. Electric Motors in Marine and Aërial Navigation.—Chapter XI. Telpherage.—Chapters XII, XIII. Latest American Motors and Motor Systems.—Chapter XIV. Latest European Motors and Motor Systems.—Chapter XV. Alternating Current Motors.—Chapter XVI. Thermo-magnetic Motors.—Appendix. The Development of the Electric Motor since 1888.

THE G. E. WIRES AND CABLES

. . For Aerial, Underground or Submarine Use.

HIGHEST CONDUCTIVITY. HIGHEST INSULATION.

Since 1892, when we began the manufacture of our present grade of rubber covered wires and cables, we have not had a single complaint as to quality. The statement invariably made is that our product is of the very highest=too good for sale in competition with cheaper grades of SO=CALLED RUBBER WIRES. There is no rubber covered wire of a higher class from every point of view than that manufactured at our Schenectady works, and as we have maintained our standard of excellence for the past five years, so we shall continue to maintain it.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

Plan Your Summer Outing Now. Go to Picturesque Mackinac via THE COAST LINE. . . . .

It only costs $13.50 from Detroit, $15.50 from Toledo, $18.00 from Cleveland for the round trip, including meals and berths. One thousand miles of lake ride on new modern steel steamers for the above rates. Send 2 cents for illustrated pamphlet. Address

A. A. Schantz, G. P. A.,

Progress the Order of the Age.

THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half gate than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickmen, engineer in charge of experiments, and E. S. Watera hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-in. Wheel—July 9, '94.

	Head	Rev. per Min.	Cu. Ft. per Sec.	H. P.	Per Cent.
Whole Gate	16.66	119.17	141.58	205.27	79.76
⅞ "	16.42	122.00	127.18	195.19	82.58
¾ "	16.78	117.33	112.60	175.74	82.18
⅝ "	17.03	111.83	98.12	149.99	79.31
½ "	16.88	118.67	82.07	118.40	75.52

Test of a 42-in. Wheel—July 14, '94.

	Head	Rev. per Min.	Cu. Ft. per Sec.	H. P.	Per Cent.
Whole Gate	16.33	128.00	144.18	199.66	80.50

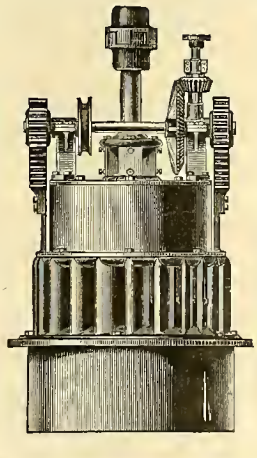
WATER POWER.

GOVERNED FOR ELECTRICAL WORK.

The limit of government of water-power is often determined by the design and construction of plant. Consult us if possible before completing your plans.

With **REPLOGLE'S COMPOUND REGULATORS** we are prepared to undertake and **guarantee** the government of water-power for all purposes, including **Electric Railway, Power and Lighting Plants.** We make and sell all of Replogle's Electrical and Mechanical Governors and other devices for the government of water-power. Expert advice furnished on application. If results of your present system are not satisfactory, write us. Address all inquiries to

THE REPLOGLE GOVERNOR WORKS,
MARK A. REPLOGLE, Chief Engineer. **AKRON, OHIO.**



THE McCORMICK TURBINE,

On Vertical or Horizontal Shaft,
Especially Adapted for Electric Work.

Gives more power as to diameter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH, York, Pa.

Estimates furnished for complete power plants and results guaranteed.

FUSE WIRE AND LINKS FOR ALL SYSTEMS, } Correct Carrying Capacity. Absolutely Uniform.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 6½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 6½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 6½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors, How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.50

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents. 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lighting, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 33 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

Hospitalier, E.—Domestic Electricity for Amateurs. Translated from the French. With additions by C. J. Wharton. With illustrations.....$2.50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations.....$5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivision and Distribution. A practical handbook. Third edition.....$3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated.$0.50
[Vol. 95 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892.....$7.25
In the edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather.....$1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations.....$2.50

Lockwood, T. D.—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

Lockwood, T. D.—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1.00

Meadowcroft, W. H.—The A. B. C. of Electricity. 35 Illustrations.....$0.50

WESTON Electrical Instrument Co.,

114-120 William St., NEWARK, N. J., U. S. A.

We desire to call attention to a line of cheap but excellent Switchboard Instruments for Direct Current Circuits, which we designate as

"Round Pattern," Style F.

These Instruments are particularly suitable for Isolated Plants and Feeder Circuits in Railway and Power Plants. Voltmeters in ranges from 3 to 750 volts. Ammeters in ranges from 1 to 2,500 amp. All Weston Instruments are unsurpassed in excellence of workmanship, in accuracy and economy of operation.

The NORTHERN ELECTRICAL MFG. CO.,

MADISON, WIS.,

MANUFACTURERS OF

MOTORS and DYNAMOS.

Our machines will operate SUSPENDED from CEILING OVERHEAD or BOLTED DIRECT to SIDE WALL as readily as when occupying floor space in the ordinary manner. All bearings self oiling. See our new patented device for CONNECTING MOTORS DIRECT TO LINE SHAFT, SAVING BELTS, PULLEYS AND FLOOR SPACE.

Aetna Railway Insulators, Anderson Line Material,

Manufactured solely by ALBERT & J. M. ANDERSON, 289 to 293 A Street, Boston, Mass.

Correspondence Solicited.

WASHINGTON PATENT AGENCY,

908-914 G St., N. W., Washington, D. C.

Largest in the world. Advice free. Electrical Experts.

Office and Factory: 610-616 Baymiller Street.

Do You Like That Man

to come daily, scattering dust on your stock and putting his dirty ladder in your way? You can avoid him if you will throw out your old dust-making lamp, and get the "Pioneer" enclosed arc lamp which only needs trimming every two or three weeks, as the carbon burns 100 to 150 hours without change. This saves you from $15 to $20 annually per lamp in carbons and labor alone, besides the dust and annoyance of daily trimming. Besides, it is shadowless, noiseless, clean, simple and safe.

The "Pioneer"
Enclosed Arc Lamp

THE ELECTRIC ARC LIGHT CO.

LOUIS B. MARKS, M. M. E.,
Chief Electrician.

. . . THE . . .

Western Telephone Construction Co.

OF CHICAGO, ILL.,

Have steadfastly held out for high grade telephone apparatus and is being rewarded by demands for its apparatus to take the place of that of so-called competitors.

The La Crosse, Wis., Telephone Co. have just purchased a 900 capacity outfit to take the place of the "Kokomo," which latter failed to give satisfaction.

The Globe Telephone Co., Winchester, Ky., have ordered a full equipment to be put in place of the "Kokomo," because the latter operated so poorly that patrons refused to pay rentals.

The Wayne County Telephone Co., Fairfield, Ill., have purchased and installed a full "Western" equipment to take the place of a so-called "genuine Hunnings" outfit, which latter failed to work after a short use.

The Richmond, Ky., Telephone Co. tried other apparatus which failed to operate satisfactorily and speak highly for the "Western" put in place of it.

The Mutual Telephone Co., Petersburg, Va., changed a Mason-Maxwell equipment and now are happy with a 400 "Western" outfit.

The Lynchburg, Va., Telephone Co. tried to get success out of other apparatus and were put to large losses until a change was made to the "Western," 500 capacity of the latter being now operated there at a profit.

Hundreds of similar cases may be cited affecting the apparatus of nearly all so-called competitors.

Why waste money buying cheap apparatus, or dealing with concerns which misrepresent matters?

Every telephone exchange in the United States using exclusively our apparatus is successful and profitable.

WIRES AND CABLES FOR

ELECTRIC LIGHT AND POWER, TELEGRAPH AND TELEPHONE USE, RAILWAY FEEDER CABLES. . .

HIGHEST CONDUCTIVITY. HIGHEST INSULATION.

Since 1892, when we began the manufacture of our present grade of rubber covered wires and cables, we have not had a single complaint as to quality. The statement invariably made is that our product is of the very highest--too good for sale in competition with cheaper grades of SO-CALLED RUBBER WIRES. There is no rubber covered wire of a higher class from every point of view than that manufactured at our Schenectady works, and as we have maintained our standard of excellence for the past five years, so we shall continue to maintain it.

ELIZABETHPORT, N. J.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

Save Your Commutators.

You can accomplish this saving easily and with slight expense by using the

BOUDREAUX BRUSH.

These brushes are made on scientific principles of a special non-sparking and highly lubricating metal rolled into leaves 1-1000th of an inch in thickness.

They have no perceptible wearing effect on the commutator and each brush will pay double its cost in this saving.

THE

"CLARK" WIRE.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

THE NEW EDITION OF

Prof. Silvanus P. Thompson's Book,

Dynamo Electric Machinery,

NOW $6.00.

New Edition, Revised and Greatly Enlarged, Price $6.00.

This is the long expected edition of Prof. Thompson's standard work. It contains nearly 1,000 pages, and is profusely illustrated.

Orders should be sent in at once.

Sent, postage prepaid, to any address on receipt of price.

ELECTRICIAN PUBLISHING CO.,
Suite 510 Marquette Building, CHICAGO.

The Electric Motor and Its Applications.

BY T. C. MARTIN AND JOSEPH WETZLER.

THIRD EDITION.

With an Appendix by Dr. Louis Bell, bringing the book down to date.

Cloth, 315 large quarto pages, 353 Illustrations. Price, $3.00.

The wealth of information contained in the three hundred and odd large double-column pages of this important work is equaled in few special technical treatises, even those of a professedly exhaustive character. More than one hundred different motors are described and illustrated—many in great detail—and the different applications are similarly fully treated. Many of the illustrations are full page, and the details of construction, particularly of armatures, are fully illustrated. The treatment is simple, clear and concise, and little mathematics is employed, the work being essentially of a practical and largely of a descriptive character. The section on alternating motors resumes in a simple manner without mathematical formulæ, the principles upon which they are based, and that on thermo-magnetic motors treats this interesting class in greater detail than can be found in any other publication. An interesting feature is the historical method of treatment, by means of which the different steps in the advance of theories and design can be clearly traced, and the varying results of explorations in many directions instructively followed.

CONTENTS.

Chapter I. Elementary Considerations.—Chapter II. Early Motors and Experiments in Europe.—Chapter III. Early Motors and Experiments in America.—Chapter IV. The Electrical Transmission of Power.—Chapter V. The Modern Electric Railway and Tramway in Europe.—Chapter VI. The Modern Electric Railway and Street-car Line in American.—Chapter VII. The Use of Storage Batteries with Electric Motors for Street Railways.—Chapter VIII. The Industrial Application of Electric Motors in Europe.—Chapter IX. The Industrial Application of Electric Motors in America.—Chapter X. Electric Motors in Marine and Aërial Navigation.—Chapter XI. Telpherage.—Chapters XII, XIII. Latest American Motors and Motor Systems.—Chapter XIV. Latest European Motors and Motor Systems.—Chapter XV. Alternating Current Motors.—Chapter XVI. Thermo-magnetic Motors.—Appendix. The Development of the Electric Motor since 1888.

Copies of this or any other electrical book published will be sent by mail, POSTAGE PREPAID, *to any address in the world, on receipt of price.*

SOLD ON... THEIR MERITS.

In placing this instrument on the market we take pleasure in stating that after a series of tests made by one of the largest railroad corporations in the United States, and by several of the best informed Telephone Experts in the country, we have been informed that our instruments far surpass any telephone now on the market, for the following reasons:

Simplicity in Construction;

Impossibility of Packing under any Conditions;

Sensitiveness and Clearness of Articulation.

Least Affected by Induction of any Instrument now on the market.

Indestructibility—Will Last a Lifetime with ordinary care, and will be as effective after 5 years' use as the day they were set up.

A Test of this instrument will prove every claim we have made for it, and we simply ask a trial to convince the buyer.

We furnish the Transmitter Arm to those who may wish to replace the transmitters on other makes of instruments.

For Prices and Discounts write to

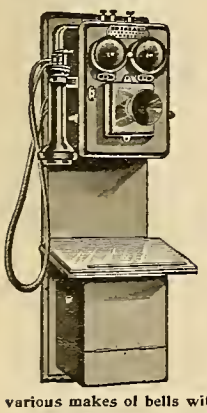
KEYSTONE TELEPHONE CO., PITTSBURGH, PA.

Standard Telephone and Electric Co.



MADISON - - WISCONSIN,

MANUFACTURERS OF THE

Standard Loud-Speaking, Long-Distance and Exchange Telephone.

Perfect in Detail, of Highest Efficiency and Best Possible Electrical and Mechanical Construction.

Equipped with **Our New Magneto Bell** provided with specially powerful Generator having large field magnets of best quality of magnetic steel, laminated armatures with ample wire space, and combining the qualities of large quantity and high voltage; polarized bells with centrally pivoted armatures (the patent on same having now expired) and high co-efficient of self-induction in proportion to winding, the whole adapted to meet the most exacting requirements of service.

Will ring bells on long lines of high resistance. Will ring a large number of bells in series on short lines. Will ring on a line various makes of bells with different windings. Will work with any make of switchboard. Will drop a shutter on long lines, etc., etc.

Sole Licensees for sale of **Milde Battery Transmitter** in the United States. Patent granted April 17th, 1894. For simplicity, small dimensions, entire multi-contact, and powerful transmission, it has no equal. No adjustment required. Will not pack or get out of order.

Standard Telephone Exchange Switchboards

Manufactured and controlled by us are the most rapid and efficient apparatus of the kind now before the public, embracing novel and original features possessed by no others; require where power generator is used but three moves to answer a subscriber's call, ring number wanted, and connect the lines. Estimates for complete equipment of exchanges and toll line systems promptly furnished.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

Progress the Order of the Age.

THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half gate than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-in. Wheel—July 9, '94.

DOMESTIC Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Electrician Publishing Co.,

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

REWIRED WITH RAVEN WHITE CORE WIRE

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY.

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

Do You Like That Man

to come daily, scattering dust on your stock and putting his dirty ladder in your way? You can avoid him if you will throw out your old dust-making lamp, and get the "Pioneer" enclosed arc lamp which only needs trimming every two or three weeks, as the carbon burns 100 to 150 hours without change. This saves you from $15 to $20 annually per lamp in carbons and labor alone, besides the dust and annoyance of daily trimming. Besides, it is shadowless, noiseless, clean, simple and safe.

The "Pioneer"

Enclosed Arc Lamp

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY, - - - Suite 510 Marquette Building, Chicago, Ill.

ARMORITE INTERIOR CONDUIT

A Perfect Conduit.

Armored Interior Conduit is the highest grade of Iron Armored Conduit on the market.

Some of its special features are its fireproof qualities, the smoothness of the bore and the fact that it can be bent into any desired shape, thus saving the cost of elbows and making it quicker and cheaper to install. Always order Armorite.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of coostruction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

Sent postpaid on receipt of price.

ELECTRICIAN PUBLISHING CO.,
SUITE 510 MARQUETTE BUILDING, CHICAGO.

The Electric Motor and Its Applications.

BY T. C. MARTIN AND JOSEPH WETZLER.

THIRD EDITION.

With an Appendix by Dr. Louis Bell, bringing the book down to date.

Cloth, 315 large quarto pages, 353 Illustrations. Price, $3.00.

The wealth of information contained in the three hundred and odd large double-column pages of this important work is equaled in few special technical treatises, even those of a professedly exhaustive character. More than one hundred different motors are described and illustrated—many in great detail—and the different applications are similarly fully treated. Many of the illustrations are full page, and the details of construction, particularly of armatures, are fully illustrated. The treatment is simple, clear and concise, and little mathematics is employed, the work being essentially of a practical and largely of a descriptive character. The section on alternating motors resumes in a simple manner without mathematical formulæ, the principles upon which they are based, and that on thermo-magnetic motors treats this interesting class in greater detail than can be found in any other publication. An interesting feature is the historical method of treatment, by means of which the different steps in the advance of theories and design can be clearly traced, and the varying results of explorations in many directions instructively followed.

CONTENTS.

Chapter I. Elementary Considerations.—Chapter II. Early Motors and Experiments in Europe.—Chapter III. Early Motors and Experiments in America.—Chapter IV. The Electrical Transmission of Power.—Chapter V. The Modern Electric Railway and Tramway in Europe.—Chapter VI. The Modern Electric Railway and Street-car Line in American.—Chapter VII. The Use of Storage Batteries with Electric Motors for Street Railways.—Chapter VIII. The Industrial Application of Electric Motors in Europe.—Chapter IX. The Industrial Application of Electric Motors in America.—Chapter X. Electric Motors in Marine and Aërial Navigation.—Chapter XI. Telpherage.—Chapters XII, XIII. Latest American Motors and Motor Systems.—Chapter XIV. Latest European Motors and Motor Systems.—Chapter XV. Alternating Current Motors.—Chapter XVI. Thermo-magnetic Motors.—Appendix. The Development of the Electric Motor since 1888.

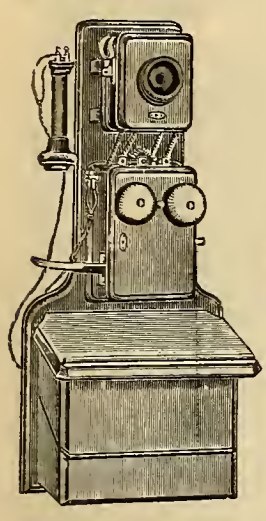
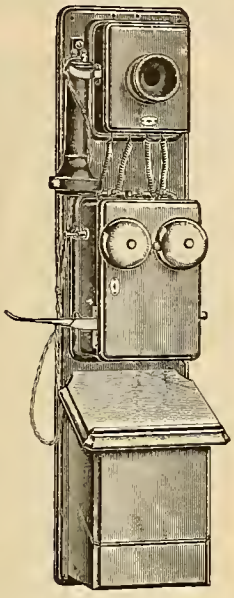
VIADUCT MFG. COMPANY





Is the **oldest** concern of the kind in this country, with one exception, manufacturing

Magneto Bells, Telephones, District Telegraph Messenger Boxes

and other appliances.

It has had 18 years' experience; 5 years as licensed manufacturer of the American Bell Telephone Company. It has made more Magneto Bells than all the other manufacturers in the country. Its standard work is known by all experienced telephone men.

The works are located at the Relay Station, Baltimore & Ohio Railroad, and run by water power.

It manufactures all of its own woodwork, as well as brass, iron, steel and everything connected with its output.

Send for new catalogue and mention this paper.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

New Dynamo Tenders' Hand-Book.
By F. B. BADT.
226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 5,000 of the new.

Progress the Order of the Age.

THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evinced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-in. Wheel—July 9, '94.

DOMESTIC
Electrical Work.
Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.
Illustrated with Twenty-two Diagrams.
By WILLIAM A. WITTBECKER.
Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.
The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Aluminum Nickel Alloy.
Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

REWIRED WITH RAVEN WHITE CORE WIRE

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY.

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

GRIMSHAW WHITE CORE. Used exclusively for all Incandescent Lighting at World's Columbian Exposition.

RAVEN WHITE CORE. Used in some of the largest buildings in the United States.

The Weston Arc Light Ammeter

Is cheap, but nevertheless reliable

and very accurate.

The scale is so proportioned that a change of $\frac{1}{10}$ of one ampere can be seen from a considerable distance. The instrument is absolutely "dead beat." Three different ranges are being made:

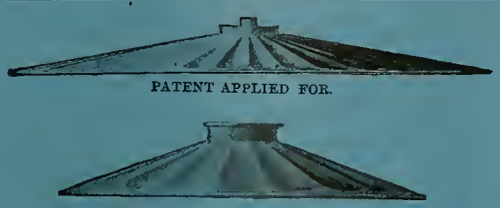
No. 1.	5.8	6.8	7.8	amperes in	$\frac{1}{10}$ ampere div.
No. 2.	8.6	9.6	10.6	" "	$\frac{1}{10}$ " "
No. 3.	9.5	10.5	11.5	" "	$\frac{1}{10}$ " "

The NORTHERN ELECTRICAL MFG. CO.,

Madison, WIS.,

Manufacturers of **MOTORS AND DYNAMOS.**

Our machines will operate SUSPENDED from CEILING OVERHEAD or BOLTED DIRECT to SIDE WALL as readily as when occupying floor space in the ordinary manner. All bearings self-oiling. See our new patented device for CONNECTING MOTORS DIRECT TO LINE SHAFT, SAVING BELTS, PULLEYS AND FLOOR SPACE. . . . . .



PATENT APPLIED FOR.

Gillett ALUMINUM LINED REFLECTORS.

THEY DON'T BREAK. Cheaper and Better than Glass Lined.

Made in all deep and flat cone styles, 10 to 35 inches in diameter. Sold through the trade. Ask dealers for catalogue and discounts.

Agents Wanted in Unoccupied Territory. Write for Estimates.

Do You Like That Man

to come daily, scattering dust on your stock and putting his dirty ladder in your way? You can avoid him if you will throw out your old dust-making lamp, and get the "Pioneer" enclosed arc lamp which only needs trimming every two or three weeks, as the carbon burns 100 to 150 hours without change. This saves you from $15 to $20 annually per lamp in carbons and labor alone, besides the dust and annoyance of daily trimming. Besides, it is shadowless, noiseless, clean, simple and safe.

The "Pioneer"
Enclosed Arc Lamp

ELIZABETHPORT, N. J.

A Case of 16 to 1

The U. S. Government grew tired of paying the Bell Company exorbitant rates for poor service. The Interior Department (including the Patent Office) investigated the telephone situation. An expert committee made thorough examination of the patents and exhaustive tests of the efficiency of various telephones and telephone apparatus. This resulted in the adoption of the system of the

WESTERN TELEPHONE CONSTRUCTION COMPANY,

although the prices for their apparatus were almost double that of the next highest bidder.

The U. S. Patent Office, Pension Building, Geological Survey and other buildings in Washington were supplied with a service over four times in extent of that formerly supplied by the Bell Company; yet the economy was so great that the system almost saved its cost the first year, and now the cost per annum is less than one-quarter of what was paid the Bell Company for less than one-quarter the service. Thus the value of the "Western" service and that of the Bell are as

16 to 1.

Look at the following facts: The two largest independent telephone exchanges in the United States are using our system and apparatus exclusively. These are at Richmond, Va., and Fort Wayne, Ind.

At Richmond, Va., a "Standard" Telephone Company were in negotiation, but the Richmond people upon investigation found that their hope of success compelled the use of "Western" apparatus. There are two "Western" telephones in actual operation in Richmond to every one "Kokomo" in operation at Grand Rapids, Mich., proving false the claims of Kokomo—Am. El. Tel. Co. We think the latter should try and make the 500 telephones and the switchboard at Grand Rapids work satisfactorily before bragging about it.

We assert that the switchboard will require changing before satisfactory operation will obtain.

The La Crosse, Wis., Telephone Co. have just purchased a 900 capacity Western outfit to replace the "Kokomo" which failed to give satisfaction.

The Globe Telephone Co., Winchester, Ky., have ordered a complete Western equipment to replace the "Kokomo." Their patrons refused to pay rentals for the poor service of the latter.

The Wayne County Telephone Co., Fairfield, Ill., installed our equipment throughout to replace the so-called "Genuine Hunnings," which failed to work.

The Richmond, Ky. Telephone Co. had to come to the Western apparatus, having failed to get satisfaction from others.

The Mutual Telephone Co., Petersburg, Va., threw out a Mason-Maxwell equipment, and are now happy with a 400 Western outfit.

The Lynchburg, Va. Telephone Co. were put to great losses by using poor apparatus until they put in a 500 Western outfit.

The Rushville, Ind., Telephone Co. tried cheap apparatus, and although "it came high," put "Western" switchboards in place of the "Kokomo outfit." The latter is for sale at 75 cts. per drop.

The Chariton (Ia.) Telephone Co. refused to pay for the unsatisfactory Strowger automatic switches, and it was necessary to replace them with our old Fisk type switch board.

WHY NOT PROFIT BY THE EXPERIENCE OF OTHERS?

THE WESTERN TELEPHONE

Offices and Factory, 250 to 254

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam eogineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY, - - - Suite 510 Marquette Building, Chicago, Ill.

Without Politics.

The Sanderson and Tennille Telephone Co. of Sanderson, Ga., tried other telephone apparatus misrepresented as "the best," but found nothing so satisfactory as the "Western."

At Shelbyville, Ill., exchange we replaced cheap apparatus.

Messrs. Hay & Goodhue, Bradford, Vt., have learned by experience that good apparatus is cheapest in the end and are now putting "Western Giants" in place of other apparatus. They have tried every style on the market.

The Northwestern Telephone & Construction Co. of Charles City, Ia., were misled into adopting apparatus which was represented as "the best." They changed their entire central office system and nearly all telephones to "Western," and say they wish it was all "Western."

E. H. Martin Telephone Co., Webster City, Ia., tried "National" and several other makes of apparatus. After considerable expense and trouble a change was made to "Western."

The Manhattan Oil Co., Lima, O., tried "West" and other apparatus, but only gained satisfaction by paying our prices for good instruments, the others displaced proving "not worth the freight."

Armour & Co. of Chicago found it desirable to discard a "Kokomo-Hunnings" outfit and put "Western" in place, getting great satisfaction out of the latter.

The Hanover (Pa.) Telephone Co., when negotiating, to begin with thought that our apparatus was costly, so they tried Gilliland switchboards and several kinds of telephones. These failing, they purchased a "Viaduct" switchboard and a lot of "Viaduct" telephones, which also proved so unsatisfactory that the patrons refused to pay rentals. General Manager O'Neill then decided to buy a first-class outfit and end his troubles. So they purchased "Western" switchboards and telephones to replace the others, and their success was immediately marked by a large and profitable increase of business with "perfect satisfaction."

The McKeesport (Pa.) Telephone Co. tried for a time to get along with Keystone telephones and Utica switchboards. This apparatus gave so much trouble that a change was made, and a four hundred "Western" equipment installed. The result proved most satisfactory to patrons and a large and profitable increase to that company.

The Enosburg Telephone Co., Enosburg Falls, Vt., tried cheap telephone apparatus, but are now satisfied to buy "Western" at a fair price.

Hundreds of similar cases could be cited.

We have at present a large line of telephones which were displaced as above stated. These telephones have been "rerigged" and may be used for private line work, and will be sold cheap. We will not guarantee them, although every one is in better condition and worth more than when furnished by the concerns that sold them. Among the lot are "Manhattan," "De Veau," "National," "Standard," "Phenix," "Missouri" (St. Louis), "Viaduct," "Keystone," "Hunnings," "M. & B.," et al.

CAUTION: We buy specially prepared carbon of the largest carbon works in the world; while others are making cheap carbon and buying parts and assembling cheap apparatus we are busy manufacturing complete telephones to a greater extent than all competitors combined.

Start right by buying "Western" apparatus at the beginning, but if you have started wrong, follow the example of the above mentioned parties.

CONSTRUCTION COMPANY,

S. Clinton street, Chicago, Ill.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers. Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

Published and for sale by ELECTRICIAN PUBLISHING CO.; Suite 510 Marquette Building, CHICAGO.

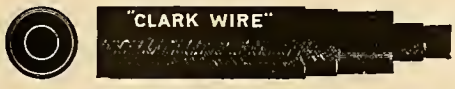
THE

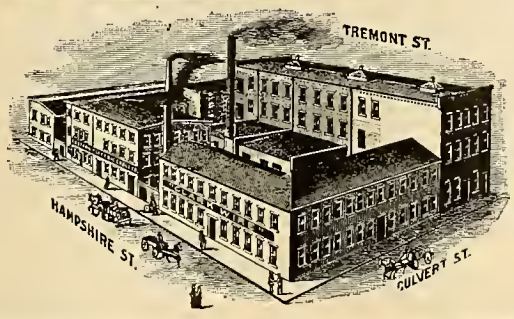
"CLARK" WIRE.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.



TRADE MARK.



In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

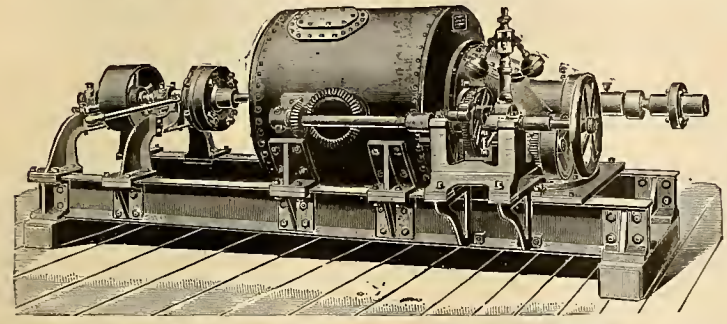
Victor Turbine Water Wheel.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter,** being **double** the **power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

SEND FOR CATALOGUE AND PARTICULARS.

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 38 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts, and where the situation admits of their use we recommend them.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 80 Pages. 39 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

SOLD ON... THEIR MERITS.

In placing this instrument on the market we take pleasure in stating that after a series of tests made by one of the largest railroad corporations in the United States, and by several of the best informed Telephone Experts in the country, we have been informed that our instruments far surpass any telephone now on the market, for the following reasons:

Simplicity in Construction;

Impossibility of Packing under any Conditions;

Sensitiveness and Clearness of Articulation.

Least Affected by Induction of any Instrument now on the market.

Indestructibility—Will Last a Lifetime with ordinary care, and will be as effective after 5 years' use as the day they were set up.

A Test of this instrument will prove every claim we have made for it, and we simply ask a trial to convince the buyer.

We furnish the Transmitter Arm to those who may wish to replace the transmitters on other makes of instruments.

For Prices and Discounts write to

Connecticut Telephone... ...and Electric Co.,

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

New Dynamo Tenders' Hand-Book.
By F. B. BADT.
220 Pages. 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

Progress the Order of the Age.

THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half gate than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-in. Wheel—July 9, '94.

	Head	Rev. per Min.	Cu. Ft. per Sec.	H. P.	Per Cent.
Whole Gate	16.46	119 17	141.58	206.27	79.76
⅞ "	16.42	122.00	127.18	195.19	82.58

THE McCORMICK TURBINE,

On Vertical or Horizontal Shaft,
Especially Adapted for Electric Work.

Gives more power as to diameter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH, York, Pa.

DOMESTIC
Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed. The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Electrician Publishing Co.,
Suite 510 Marquette Bldg.,
CHICAGO.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

PRACTICAL
DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

Sent postpaid on receipt of price.

ELECTRICIAN PUBLISHING CO.,
SUITE 510 MARQUETTE BUILDING, CHICAGO.

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

Have You Heard About

New Orient Lamps?

WELL, LISTEN!

They are made throughout of the very best materials obtainable.
They are made from **start** to **finish** by **skilled** workmen and are mechanically perfect.
They are carefully and thoroughly tested by means of instruments made **especially** for the purpose, and **ONLY PERFECT** Lamps are allowed to leave the factory.
They are **uniform in efficiency, voltage** and **candle-power** and are fully guaranteed.
They are of **HIGH EFFICIENCY** and you will **save money** by **using them.**
They are **not** the **lowest priced** lamps on the market, but **they ARE** the **CHEAPEST** lamps obtainable, if the **ratio of light given off** to **the current consumed** is taken into consideration.
We want you to know about these things, and if you can find it to your advantage to deal with us, we would be pleased to hear from you.

Do You Like That Man

The "Pioneer"
Enclosed Arc Lamp

to come daily, scattering dust on your stock and putting his dirty ladder in your way? You can avoid him if you will throw out your old dust-making lamp, and get the "Pioneer" enclosed arc lamp which only needs trimming every two or three weeks, as the carbon burns 100 to 150 hours without change. This saves you from $15 to $20 annually per lamp in carbons and labor alone, besides the dust and annoyance of daily trimming. Besides, it is shadowless, noiseless, clean, simple and safe.

HARDTMUTH CORED CARBONS for Direct and Alternating Current ARC LAMPS.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.

AMERICAN CARBON CO.'S Plain and Coated CARBONS FOR SERIES ARC LIGHTING.

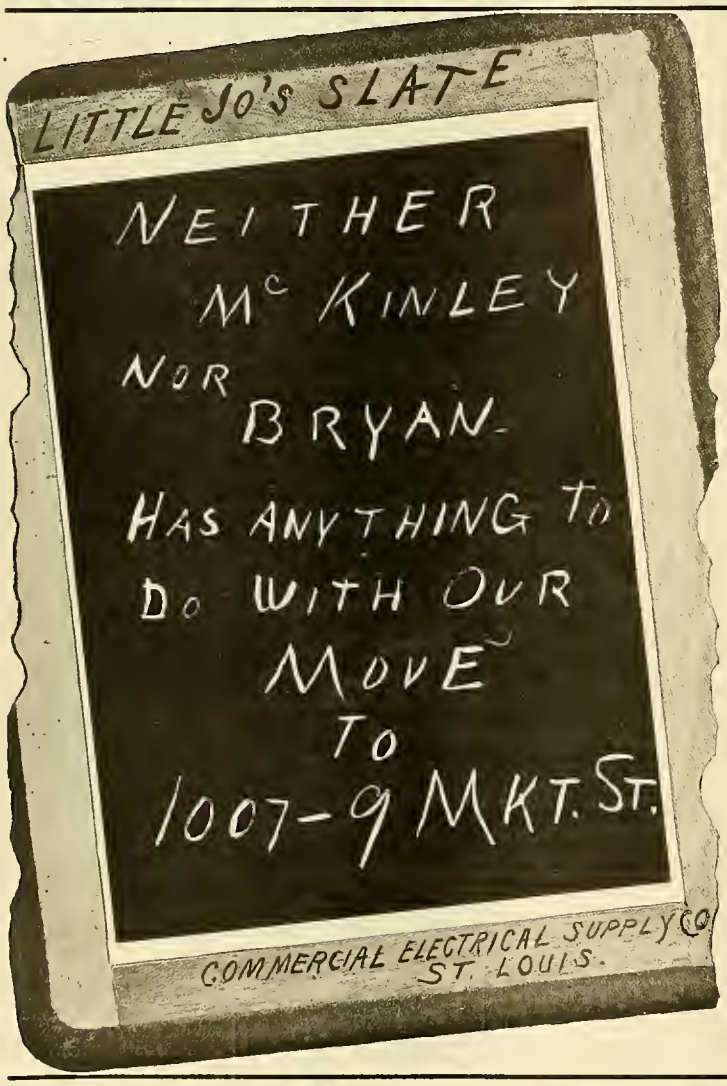
GENERAL WESTERN AGENTS.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.

Chicago Edison Co.,

DEALERS IN ELECTRIC LIGHTING SUPPLIES,

139 Adams Street, CHICAGO.



ELECTRIC LAMP SIGNS....

NEW ERA IN ELECTRIC ADVERTISING.

Each lamp is a single letter, which greatly simplifies the construction of a sign, and permits an unlimited advertising display. This sign is low-priced, economical of operation, easily read, very conspicuous, and may be changed in a moment from one form of words to another.

We manufacture High Grade Incandescent Lamps. Lamps of any voltage furnished.

Ask your NEAREST SUPPLY HOUSE for Sample or write

DICKINSON ELECTRIC SUPPLY CO.,

High Grade Incandescent Lamps,

American Tract Society Building, NO. 150 NASSAU STREET, NEW YORK.

The "H. W. J." Electric Car Heater.

(PATENTED.)

Simplicity—Effectiveness—Durability—Economy.

No coils to short-circuit or break, no oxidation, perfect air circulation, easily controlled and regulated by patented knife switch. Adjustable to three different degrees of heat. Prices, etc., on application. . . . . .

H. W. JOHNS MANUFACTURING CO., 240-242 Randolph Street, . . . CHICAGO, ILL.

New York. Philadelphia. Boston.

THIS ALTERNATING CEILING FAN WORKS.

We Guarantee It. No Commutator. No Brushes. Uses less current than any Fan on the Market.

Our Direct Current Fan Works.

OUR GUARANTEE IS GOOD. Only Fan having Blade Adjuster. Air can be thrown UP or DOWN. All Bearings SELF-OILING.

Ask for New Catalogue and Discounts, and you will send us an order. . . . . .

FANS FINISHED IN BRONZE, NICKEL AND POLISHED BRASS. We manufacture a full line of BELT FANS AND WATER MOTORS. Agents wanted in Leading Cities.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 80 Pages. 39 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

TRADE MARK:
"Chloride Accumulator"
REGISTERED SEPTEMBER 11, 1894.

STORAGE BATTERIES

Are being operated in many of the largest and most modern lighting and power stations in this country. They are effecting increases in economy of operation, reliability of service and facility in the handling of the stations; they occupy a place in the operation of a plant that no other apparatus can fill.

The Woonsocket, R. I., Electric Machine and Power Co. and the Edison Illuminating Co., of Easton, Pa., have recently contracted for batteries of CHLORIDE ACCUMULATORS for their stations.

THE ELECTRIC STORAGE BATTERY CO.,

PHILADELPHIA, PA.

Circular, with curves from stations operating batteries, upon application.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.

A NEW SWITCHBOARD.

We have just brought out an improvement on our American Telephone Switchboard, embodying a number of new features which cannot fail to commend themselves to every practical telephone man.

Our switchboard as now constructed is, we think, superior to any other on the market, and we solicit a thorough investigation of its merits.

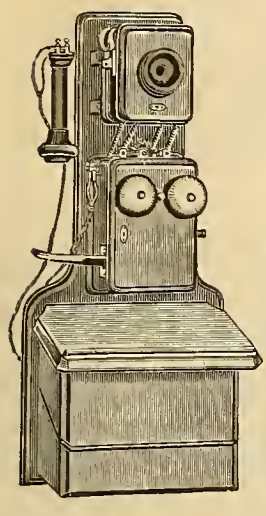
VIADUCT MFG. COMPANY



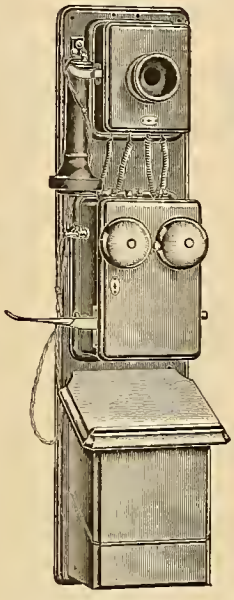
Is the **oldest** concern of the kind in this country, with one exception, manufacturing

Magneto Bells, Telephones, District Telegraph Messenger Boxes

and other appliances.

It has had 18 years' experience; 5 years as licensed manufacturer of the American Bell Telephone Company. It has made more Magneto Bells than all the other manufacturers in the country. Its standard work is known by all experienced telephone men.

The works are located at the Relay Station, Baltimore & Ohio Railroad, and run by water power.



It manufactures all of its own woodwork, as well as brass, iron, steel and everything connected with its output.

Send for new catalogue and mention this paper.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

NOTICE.

TO THOSE INTERESTED IN ELECTRIC LIGHTING.

New Dynamo Tenders' Hand-Book.

By F. B. BADT.
226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 5,000 of the new.

Progress the Order of the Age.

THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickmen, engineer in charge of experiments, and E. S. Waters hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-in. Wheel—July 9, '94.

DOMESTIC Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring.

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY, - - - Suite 510 Marquette Building, Chicago, Ill.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 180 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 408 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 6½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 6½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 6½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.60

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors, How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams.
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro-Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

GRIMSHAW WHITE CORE. Used exclusively for all Incandescent Lighting at World's Columbian Exposition.

ALTERNATING FAN MOTORS FOR 7,200 AND 16,000 ALTERNATIONS—52 AND 104 VOLTS, IN NICKEL PLATE AND ANTIQUE COPPER FINISH.

We have a complete line of Shawmut Fuse Wire and Knife Switches in stock. Send us your order.

WESTERN ELECTRIC COMPANY, CHICAGO, NEW YORK.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

SOLD ON... THEIR MERITS.

In placing this instrument on the market we take pleasure in stating that after a series of tests made by one of the largest railroad corporations in the United States, and by several of the best informed Telephone Experts in the country, we have been informed that our instruments far surpass any telephone now on the market, for the following reasons:

Simplicity in Construction;

Impossibility of Packing under any Conditions;

Sensitiveness and Clearness of Articulation.

Least Affected by Induction of any Instrument now on the market.

Indestructibility—Will Last a Lifetime with ordinary care, and will be as effective after 5 years' use as the day they were set up.

A Test of this instrument will prove every claim we have made for it, and we simply ask a trial to convince the buyer.

We furnish the Transmitter Arm to those who may wish to replace the transmitters on other makes of instruments.

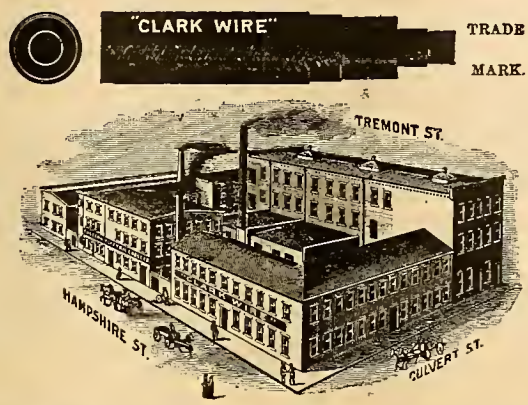
THE

"CLARK" WIRE.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.



In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

Address, **"BUYER,"**

Care WESTERN ELECTRICIAN, Suite 510 Marquette Bldg., Chicago, Ill.

To Electrical and Steam Contractors.

Sealed proposals will be received by the Superintendent of Public Property of the State of Wisconsin, up to twelve o'clock noon, of Thursday, August 27th, 1896, for the material and labor necessary for the construction of an electric lighting plant, with all necessary appurtenances, as per complete plans and specifications on file in the office of the Superintendent of Public Property, Madison, Wisconsin; also in the office of Charles G. Armstrong, consulting engineer, 1306-1307 Great Northern Building, Chicago, Ill.

Bids must be accompanied by a certified check in the sum of 2 per cent. of the amount of the bid, payable to the order of the Superintendent of Public Property, to be forfeited to the State of Wisconsin, in case the bidder or bidders fail to enter into a contract with the State, and furnish a satisfactory bond for the proper construction of the same within ten days after the acceptance of their proposal.

Bids must be sealed and directed to C. E. Morley, Superintendent of Public Property, and must be plainly marked on the envelope, "Proposals for Electric Lighting Plant for the State Capitol, Madison."

The Superintendent of Public Property reserves the right to accept any bid or combination of bids, or to reject any or all bids which he may deem to the advantage of the State.

Witness my hand at the Capitol, in the city of Madison, this eighth day of August, 1896.

C. E. MORLEY,
Superintendent of Public Property.

FOR SALE.

1,500 tons 60-lb. relaying rails; 1,000 tons 75-lb. relaying rails; 800 tons 45-lb. relaying rails. 30 electric cars in good order. New electric cars and new and second-hand passenger cars. 50 box and 50 flat cars, 25 tons capacity. Specialty in negotiating electric and steam railroad bonds when payable at Farmers' Loan and Trust Co., N. Y., or Knickerbocker Trust Co., 66 Broadway. N. Y., and printed at an A1 Bank Note Company in N. Y.

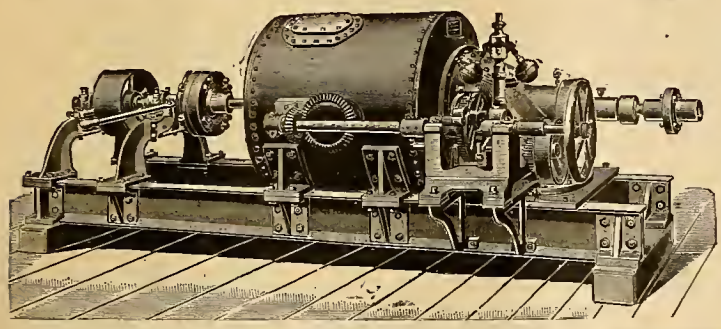
Victor Turbine Water Wheel.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter,** being **double the power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

SEND FOR CATALOGUE AND PARTICULARS.

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 38 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts, and where the situation admits of their use we recommend them.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 80 Pages. 39 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

JUST WHAT YOU ARE LOOKING FOR!

A New and Valuable Book

Electric Lighting Plants,

THEIR COST AND OPERATION.

By W. J. Buckley. With numerous illustrations, diagrams, plans, tables, etc. 275 pages. Cloth. Price, $2.00, postage free. This work gives all necessary data for the erection of an electric light plant of any size. The cost of Arc Lighting. The cost of Incandescent Lighting.

READ THE TABLE OF CONTENTS:

Alternating Arc Lamps, Arc Plants, Belting, Boilers, Boiler Settings, Boiler Efficiencies, Books, Building, Cost of Arc Dynamos and Lamps, Cost of Arc Plants Erected, Cost of Alternating Dynamos, Cost of Alternating Plants Erected, Cost of Belts, Cost of Boilers, Cost of Brick Chimneys, Cost of Copper for Alternating Circuit, Cost of Corliss Engines, Cost of Compound Corliss Engines, Cost of Compound High Speed Engines, Cost of Condensers, Cost of Friction Clutch Pulleys, Cost of Heaters, Cost of High Speed Engines, Cost of Incandescent Dynamos, Cost of Idlers, Cost of Injectors, Cost of Meters, Cost of Motors, Cost of Operating Lamps per hour, Cost of Power Generators. Cost of Poles, Cost of Plain Pulleys, Cost of Pillow Blocks, Cost of Pumps, Cost of Shafting, Cost of Shaft Couplings, Cost of Stacks—iron, Cost of Stacks—brick, Cost of Steam, Cost of Transformers, Cost of Wire, Chimneys, Circuit Loss, Contract Blanks, Current Distribution, Circuits—overhead, Circular Mils of Wire, Depreciation, Direct Connected Apparatus, Dynamos, Dynamo Data, Economy of Condensing, Economy of Covering Steam Pipes, Economy of Heater, Efficiency of Engines, Engines, Equivalent of Current in Horse Power, Equivalent Rates of Lighting, Fuel, Horse Power of Belting, Horse Power of Motors, Horse Power of Shafting, Incandescent Arc Lamps, Instruments, Instructions for Employes, Insulation, Labor, Load Chart, Meter Connections, Municipal Ownership, Natural Gas, N.E.L.A. Standard Rules, Oil, Outcome of Practical Management, Pole Line, Pulleys, Rope Transmission, Resistance of Wire, Rules—Fire Underwriters, Report Com. on Data N. E. L. A., Reports of Cities Owning Plant, Reports of Cities Contracting, Stock Room, Shafting, Transformers, Transformer Curves, Wiring Tables—Primary Wiring, Wiring Tables—Secondary Wiring, Wiring Tables, Motor Wiring, Wire, Wire Formula, Water Power, Wood as Fuel. The only book of its kind in the English Language. **Price, $2.00.**

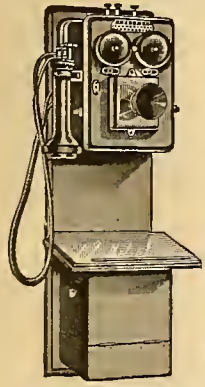
TELEPHONES AND SUPPLIES
We are sole manufacturers of the celebrated
KEYSTONE LONG-DISTANCE TELEPHONE,
an instrument which has no superior.
Write to us for Catalogue and prices.
KEYSTONE TELEPHONE CO., PITTSBURGH, PA.

Standard Telephone and Electric Co.
MADISON - - WISCONSIN,
MANUFACTURERS OF THE



Standard Loud-Speaking, Long-Distance and Exchange Telephone.

Perfect in Detail, of Highest Efficiency and Best Possible Electrical and Mechanical Construction.

Equipped with **Our New Magneto Bell** provided with specially powerful Generator having large field magnets of best quality of magnetic steel, laminated armatures with ample wire space, and combining the qualities of large quantity and high voltage; polarized bells with centrally pivoted armatures (the patent on same having now expired) and high co-efficient of self-induction in proportion to winding, the whole adapted to meet the most exacting requirements of service.

Will ring bells on long lines of high resistance. Will ring a large number of bells in series on short lines. Will ring on a line various makes of bells with different windings. Will work with any make of switchboard. Will drop a shutter on long lines, etc., etc.

Sole Licensees for sale of **Milde Battery Transmitter** in the United States. Patent granted April 17th, 1894. For simplicity, small dimensions, entire multi-contact, and powerful transmission, it has no equal. No adjustment required. Will not pack or get out of order.

Standard Telephone Exchange Switchboards

Manufactured and controlled by us are the most rapid and efficient apparatus of the kind now before the public, embracing novel and original features possessed by no others; require where power generator is used but three moves to answer a subscriber's call, ring number wanted, and connect the lines. Estimates for complete equipment of exchanges and toll line systems promptly furnished.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

HIGH GRADE on paper means little,
BUT in fact and manufacture MUCH.

The Electric Motor and Its Applications.

BY T. C. MARTIN AND JOSEPH WETZLER.

THIRD EDITION.

With an Appendix by Dr. Louis Bell, bringing the book down to date.

Cloth, 315 large quarto pages, 353 illustrations. Price, $3.00.

The wealth of information contained in the three hundred and odd large double-column pages of this important work is equaled in few special technical treatises, even those of a professedly exhaustive character. More than one hundred different motors are described and illustrated—many in great detail—and the different applications are similarly fully treated. Many of the illustrations are full page, and the details of construction, particularly of armatures, are fully illustrated. The treatment is simple, clear and concise, and little mathematics is employed, the work being essentially of a practical and largely of a descriptive character. The section on alternating motors resumes in a simple manner without mathematical formulæ, the principles upon which they are based, and that on thermo-magnetic motors treats this interesting class in greater detail than can be found in any other publication. An interesting feature is the historical method of treatment, by means of which the different steps in the advance of theories and design can be clearly traced, and the varying results of explorations in many directions instructively followed.

CONTENTS.

Chapter I. Elementary Considerations.—Chapter II. Early Motors and Experiments in Europe.—Chapter III. Early Motors and Experiments in America.—Chapter IV. The Electrical Transmission of Power.—Chapter V. The Modern Electric Railway and Tramway in Europe.—Chapter VI. The Modern Electric Railway and Street-car Line in American.—Chapter VII. The Use of Storage Batteries with Electric Motors for Street Railways.—Chapter VIII. The Industrial Application of Electric Motors in Europe.—Chapter IX. The Industrial Application of Electric Motors in America.—Chapter X. Electric Motors in Marine and Aërial Navigation.—Chapter XI. Telpherage.—Chapters XII, XIII. Latest American Motors and Motor Systems.—Chapter XIV. Latest European Motors and Motor Systems.—Chapter XV. Alternating Current Motors.—Chapter XVI. Thermo-magnetic Motors.—Appendix. The Development of the Electric Motor since 1888.

THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-in. Wheel—July 9, '94.

WATER WHEELS

For heads of 3 feet to 2000 feet.
Specially designed and adapted to
ELECTRIC POWER AND LIGHTNING PLANTS.
Securing a high guaranteed percentage and great steadiness of motion, under variable loads. An unequaled concentration of power, and an unprecedented high velocity. Its quickly operating balanced gates, affords prompt and fine regulation by governor. Satisfaction guaranteed where others fail. Write for catalogue, and state your wants.

CHICAGO.

THE McCORMICK TURBINE,

On Vertical or Horizontal Shaft,
Especially Adapted for Electric Work.

Gives more power per diameter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH, York, Pa.

Estimates furnished for complete power plants and results guaranteed.

DOMESTIC

Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructious whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Electrician Publishing Co.,

Suite 510 Marquette Bldg., CHICAGO.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

PRACTICAL

DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

Sent postpaid on receipt of price.

ELECTRICIAN PUBLISHING CO.,

SUITE 510 MARQUETTE BUILDING, CHICAGO.

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finisb desired.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.60

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 6½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 6½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 6 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 6½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo. How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0 60

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.50

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations.....$2.5

Desmond, Chas.—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 6. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised ..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

Hospitalier, E.—Domestic Electricity for Amateurs. Translated from the French. With additions by C. J. Wharton. With illustrations.....$2 50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 662 pages, and 670 illustrations.....$5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition.....$3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated.$0.50
[Vol. 95 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulas, Tables and Data. 32mo, leather.....$1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations.....$2.50

MANUFACTURERS OF

Clusters, Flanges,

Special Electrical Goods.

THE CARD ELECTRIC COMPANY,

Mansfield, Ohio.

CARD Generators for Power Transmission and Isolated Lighting. Generators are all Multipolar and Slow Speed.

CARD Multipolar Slow Speed Stationary Motors. Reversible Motors and Controllers for Rolling Mills, Bridges, Traveling Cranes and Elevators,

Agents Wanted in Unoccupied Territory. **Write for Estimates.**

READ THE BLUE ELECTRICAL PAPER.

Gordon Primary Battery

EXCELS IN

Long Life, Efficiency,
Economy, Adaptability,
It is absolutely Non-Freezing.
Labor Saving,
Free from Local Action,
Freedom from Gases and Odors.
Superior Generation of Energy.

These Batteries are in use by the most prominent Telephone, Fire Alarm and Railroad Companies of America.
Send for descriptive circular and price list
We guarantee all our Cells.

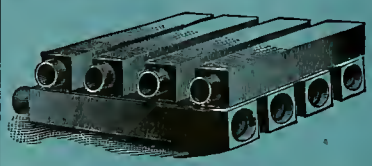
MANUFACTURED BY

The Gordon-Burnham Battery Co.,

82 West Broadway, New York.

N. B. BUBB, Manager. J. M. CHESNUT, Supt.

WILLIAMSPORT WOODEN PIPE CO.,



MANUFACTURERS OF

WOODEN CONDUIT,

UNDER CHESNUT PATENT.

Write for Information and Save Money.

WILLIAMSPORT, PA.

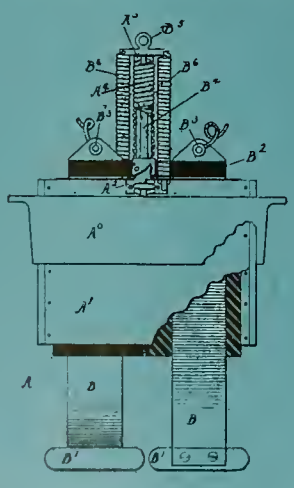
AN EXTENSIVE AND IMPROVED CREOSOTING WORKS ATTACHED TO THE PLANT.

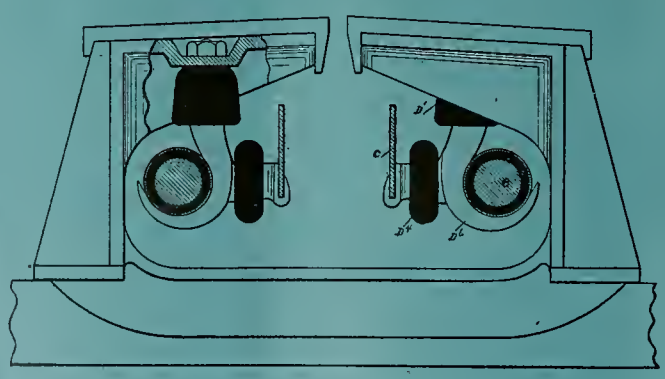
For underground electrical purposes the conduit produced under this process is the most practical, the most durable and the most economical of any conduit on the market.

This conduit is now being used in the leading cities, and the best of references furnished on application.

THE K. A. K. CONDUIT SYSTEM.

SIMPLE IN CONSTRUCTION AND PRACTICAL IN OPERATION.





PERFECT INSULATION. The exposed doubly insulated contact rail is in sections and is connected independently by a fuse or cut-out to the doubly insulated and independent feeder wire. The trolley can be raised from and lowered into the slot at will. Especially adapted for use in conjunction with the overhead trolley.

KROTZ, ALLEN & KELLY,

SEND FOR CATALOGUE. **SPRINGFIELD, OHIO, U. S. A.**

The "Pioneer" Enclosed Arc Lamp.

In Two Years The Saving in carbon and trimming alone pays for the lamp, and you are free from the annoyance of daily cleaning, as it runs two to three weeks without change of carbons. It is shadowless, noiseless and steady. A perfect spark arrester—simple and safe.

ALPHA ELECTRIC LAMP SIGNS....

NEW ERA IN ELECTRIC ADVERTISING.

Each lamp is a single letter, which greatly simplifies the construction of a sign, and permits an unlimited advertising display. This sign is low-priced, economical of operation, easily read, very conspicuous, and may be changed in a moment from one form of words to another.

We manufacture High Grade Incandescent Lamps. Lamps of any voltage furnished.

Ask your NEAREST SUPPLY HOUSE for Sample or write

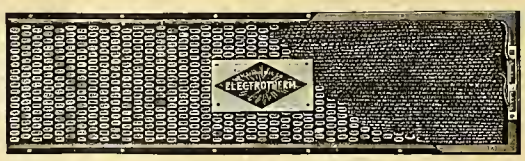
DICKINSON ELECTRIC SUPPLY CO.,

High Grade Incandescent Lamps,

American Tract Society Building, NO. 150 NASSAU STREET, NEW YORK.

The "H. W. J." Electric Car Heater.

(PATENTED.)



Simplicity—Effectiveness—Durability—Economy.

No coils to short-circuit or break, no oxidation, perfect air circulation, easily controlled and regulated by patented knife switch. Adjustable to three different degrees of heat. Prices, etc., on application. . . . . .

H. W. JOHNS MANUFACTURING CO., 240-242 Randolph Street, . . . CHICAGO, ILL.

New York. Philadelphia. Boston.

THIS ALTERNATING CEILING FAN WORKS.

We Guarantee It. No Commutator. No Brushes. Uses less current than any Fan on the Market.

Our Direct Current Fan Works.

OUR GUARANTEE IS GOOD. Only Fan having Blade Adjuster. Air can be thrown UP or DOWN. All Bearings SELF-OILING.

Ask for New Catalogue and Discounts, and you will send us an order. . . . . .

FANS FINISHED IN BRONZE, NICKEL AND POLISHED BRASS. We manufacture a full line of BELT FANS AND WATER MOTORS. Agents wanted in Leading Cities.

Hunter Fan & Motor Co.,

It is still warm, do not forget our 1896 Fan Motor.

ALTERNATING FAN MOTORS FOR 7,200 AND 16,000 ALTERNATIONS—52 AND 104 VOLTS, IN NICKEL PLATE AND ANTIQUE COPPER FINISH.

We have a complete line of Shawmut Fuse Wire and Knife Switches in stock. Send us your order.

WESTERN ELECTRIC COMPANY, CHICAGO, NEW YORK.

WESTERN ELECTRICIAN

Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been **FOUND** that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the **NORTH POLE.**

"ELECTRA" HIGH GRADE NUERNBERG CARBONS

Are in every respect the most satisfactory and economical carbons to use for either alternating or direct-current constant potential lamps. They give the

MOST LIGHT

and at the same time, in burning, produce the

LEAST DUST,

which means that the carbon is more nearly entirely consumed, thus giving a longer life and a less amount of carbon dust than any other carbon on the market.

We will be glad to have large users determine these facts for themselves by means of experiment.

A complete stock in Chicago at manufacturers' prices.

DON'T THINK

That you can keep posted as to what is going on in the western electrical field without reading the Western Electrician. It is the electrical newspaper, and if you are not a subscriber you will find it to your advantage to become one at once.

$3.00 per year;
$1.50 for six months.

ELECTRICIAN PUBLISHING CO.,
Suite 510 Marquette Bldg., CHICAGO.

To Electrical and Steam Contractors.

Sealed proposals will be received by the Superintendent of Public Property of the State of Wisconsin, up to twelve o'clock noon, of Thursday, August 27th, 1896, for the material and labor necessary for the construction of an electric lighting plant, with all necessary appurtenances, as per complete plans and specifications on file in the office of the Superintendent of Public Property, Madison, Wisconsin; also in the office of Charles G. Armstrong, consulting engineer, 1306-1307 Great Northern Building, Chicago, Ill.

Bids must be accompanied by a certified check in the sum of 2 per cent. of the amount of the bid, payable to the order of the Superintendent of Public Property, to be forfeited to the State of Wisconsin, in case the bidder or bidders fail to enter into a contract with the State, and furnish a satisfactory bond for the proper construction of the same within ten days after the acceptance of their proposal.

Bids must be sealed and directed to C. E. Morley, Superintendent of Public Property, and must be plainly marked on the envelope, "Proposals for Electric Lighting Plant for the State Capitol, Madison."

The Superintendent of Public Property reserves the right to accept any bid or combination of bids, or to reject any or all bids which he may deem to the advantage of the State.

Witness my hand at the Capitol, in the city of Madison, this eighth day of August, 1896.

C. E. MORLEY,
Superintendent of Public Property.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumeyer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines; The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

"ELECTRIC LIGHTING,"

A PRACTICAL EXPOSITION OF THE ART FOR THE USE OF

Engineers, Students and Others Interested in the Installation or Operation of Electrical Plants.

BY FRANCIS B. CROCKER,

Professor of Electrical Engineering, Columbia University, New York.

Price $3, Prepaid. - Practical and Up-to-Date.

Just the Book you want. 450 Pages, over 150 Illustrations. Read the

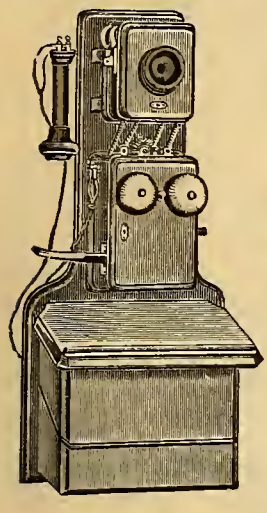
TABLE OF CONTENTS:

Chapter I, Introduction; Chapter II, History of Electric Lighting; Chapter III, General Units and Measures; Chapter IV, Classification and Selection of Electric Lighting System; Chapter V, The Location and General Arrangement of Electric Lighting Plants; Chapter VI, Buildings for Electric Lighting Plants; Chapter VII, Possible Sources of Electrical Energy; Chapter VIII, The Steam Engine, History and General Principles; Chapter IX, Steam Boilers for Electric Lighting; Chapter X, Steam Engines for Electric Lighting, General Construction; Chapter XI, Typical Forms of Steam Engine for Electric Lighting; Chapter XII, Steam Engines for Electric Lighting, Selection, Installation and Management; Chapter XIII, Gas, Oil and Hot Air Engines; Chapter XIV, Water Wheels and Windmills; Chapter XV, Mechanical Connections between Engines and Dynamos, Direct Coupling, Belting and Shafting; Chapter XVI, Toothed, Friction and Other Gearing; Chapter XVII, Principles, Construction and Management; Chapter XXI, Applications of Accumulators in Electric Lighting; Chapter XXII, Switchboards, Including Switches, Fuses and Circuit-Breakers; Chapter XXIII, Electrical Measuring Instruments; Chapter XXIV, Lightning Arresters.

Every Engineer and Electrician who desires to thoroughly master the Art of Electric Lighting should have a copy of this book. Sent promptly.

ELECTRICIAN PUBLISHING COMPANY, Suite 510 Marquette Building, CHICAGO.

VIADUCT MFG. COMPANY



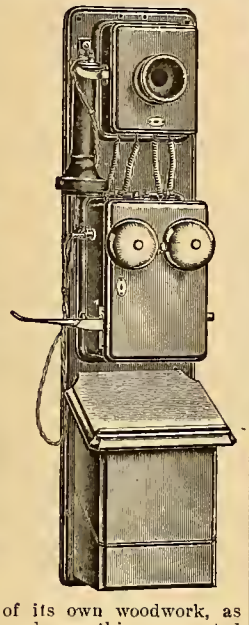
Is the **oldest** concern of the kind in this country, with one exception, manufacturing

Magneto Bells, Telephones, District Telegraph Messenger Boxes

and other appliances.

It has had 18 years' experience; 5 years as licensed manufacturer of the American Bell Telephone Company. It has made more Magneto Bells than all the other manufacturers in the country. Its standard work is known by all experienced telephone men.

The works are located at the Relay Station, Baltimore & Ohio Railroad, and run by water power.



It manufactures all of its own woodwork, as well as brass, iron, steel and everything connected with its output.

Send for new catalogue and mention this paper.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 80 Pages. 39 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

The Electric Motor and Its Applications.

BY T. C. MARTIN AND JOSEPH WETZLER.

THIRD EDITION.

With an Appendix by Dr. Louis Bell, bringing the book down to date.

Cloth, 315 large quarto pages, 353 Illustrations. Price, $3.00.

The wealth of information contained in the three hundred and odd large double-column pages of this important work is equaled in few special technical treatises, even those of a professedly exhaustive character. More than one hundred different motors are described and illustrated—many in great detail—and the different applications are similarly fully treated. Many of the illustrations are full page, and the details of construction, particularly of armatures, are fully illustrated. The treatment is simple, clear and concise, and little mathematics is employed, the work being essentially of a practical and largely of a descriptive character. The section on alternating motors resumes in a simple manner without mathematical formulæ, the principles upon which they are based, and that on thermo-magnetic motors treats this interesting class in greater detail than can be found in any other publication. An interesting feature is the historical method of treatment, by means of which the different steps in the advance of theories and design can be clearly traced, and the varying results of explorations in many directions instructively followed.

CONTENTS.

Chapter I. Elementary Considerations.—Chapter II. Early Motors and Experiments in Europe.—Chapter III. Early Motors and Experiments in America.—Chapter IV. The Electrical Transmission of Power.—Chapter V. The Modern Electric Railway and Tramway in Europe.—Chapter VI. The Modern Electric Railway and Street-car Line in American.—Chapter VII. The Use of Storage Batteries with Electric Motors for Street Railways.—Chapter VIII. The Industrial Application of Electric Motors in Europe.—Chapter IX. The Industrial Application of Electric Motors in America.—Chapter X. Electric Motors in Marine and Aërial Navigation.—Chapter XI. Telpherage.—Chapters XII, XIII. Latest American Motors and Motor Systems.—Chapter XIV. Latest European Motors and Motor Systems.—Chapter XV. Alternating Current Motors.—Chapter XVI. Thermo-magnetic Motors.—Appendix. The Development of the Electric Motor since 1888.

THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half gate than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickmon, engineer in charge of experiments, and E. S. Waters hydraulic engineer

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-in. Wheel—July 9, '94.

DOMESTIC
Electrical Work.
Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.
Illustrated with Twenty-two Diagrams.
By WILLIAM A. WITTBECKER.
Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.
The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Aluminum Nickel Alloy.
Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.
This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.
Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

PRACTICAL
DYNAMO BUILDING,
With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring.
BY L. C. ATWOOD.
Profusely illustrated. Size of page, 10x8 inches. Price, $3.
"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*
Pronounced to be a PRACTICAL AND COMPLETE WORK.

METROPOLITAN ELECTRIC COMPANY,
186-188 Fifth Avenue, Chicago.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Phillip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.50

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams. Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 6. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 550 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

Hospitalier, E.—Domestic Electricity for Amateurs. Translated from the French. With additions by C. J. Wharton. With illustrations.....$2.50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 670 illustrations.....$5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition.....$3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated.$0.50
[Vol. 96 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 136 illustrations.....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather.....$1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations.....$2.50

Lockwood, T. D.—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

Lockwood, T. D.—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1.00

Meadowcroft, W. H.—The A. B. C. of Electricity. 35 Illustrations.....$0.50

Martin, T. C.—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition.....$4.00

Martin, T. C. and Wetzler, J.—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations.....$3.00

Maver, and Davis, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

McClure, J. B.—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc..$1.00

Niaudet, Alfred.—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated.....$2.50

Noll, Augustus.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

Pope, Franklin Leonard.—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged.....$1.50

Prindle, H. B.—A Popular Treatise on the Electric Railway of to-day. Fully illustrated.....$0.25

Russell, Stuart A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

Salomons, Sir David.—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand-book. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893.....$1.50

Sloane, T. O'Conner.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated.....$1.00

Sloane, T. O'Connor.—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations.$3.00

Sloane, T. O'Connor.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys.....$1.00

Sloane, T. O'Connor.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

Tesla, Nikola.—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author. Illustrated.....$1.00

Tesla, Nikola.—Lectures on the Electro-Magnet. Illustrated.....$1.00

Thurston, Prof. R. H.—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates.....$1.50

Thomson, Prof. Elihu.—What is Electricity? Illustrated.$0.25

Thompson, Sylvanus P.—Dynamo-Electric Machinery. A Series of Lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66).....$0.50

Thompson, Sylvanus P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of.....$3.50

Thompson, Sylvanus P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75).....$0.50

Thompson, Sylvanus P.—Dynamo-Electric Machinery. Fourth edition, revised and rewritten. Numerous illustrations and 29 plates. 1,000 pages.....$6.00

Trevert.—How to Make Electric Batteries at Home. Illustrated.....$0.25

Urquhart.—Electro-Plating. A Practical Hand-book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions.....$2.00

Walker, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 93).$0.50

Webb, H. L.—A practical Guide to the Testing of Insulated Wires and Cables. Illustrated.....$1.00

Webb, Herbert Laws.—Telephone Hand-book, Illustrated. 12mo, cloth. Chicago, 1895.....$1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

OFFICE
The Ferris Wheel Co.
1131 THE ROOKERY.

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

For Alphabetical Index of Advertisements See Page III.

We manufacture a high grade Knife Switch for switchboard work. We call it the E Switch.

A quick break switch, made in sizes from 50 amperes capacity to 800 amperes. They will be listed in our new catalog. We manufacture arc and incandescent dynamos and direct current motors. Also arc lamps.

WE HAVE A GENERAL CATALOG. HAVE YOU A COPY?

We have in stock in our Chicago Store - - -

WAITING FOR YOUR ORDERS

WIRE—Weatherproof, Annunciator, Office, Magnet and Rubber Covered WIRE.

SOCKETS, SWITCHES, CUT-OUTS,
TUBES AND INSULATORS.

Write to us on these goods and see what we can do for you. . . . . .

It is still warm, do not forget our 1896 Fan Motor.

ALTERNATING FAN MOTORS FOR 7,200 AND 16,000 ALTERNATIONS—52 AND 104 VOLTS, IN NICKEL PLATE AND ANTIQUE COPPER FINISH.

We have a complete line of Shawmut Fuse Wire and Knife Switches in stock. Send us your order.

WESTERN ELECTRIC COMPANY, = = Chicago, New York.

WESTERN ELECTRICIAN

Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been **FOUND** that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the **NORTH POLE.**

.....Porcelain Specialties of all kinds.....

X-RAYS FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 80 Pages. 39 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing 25 Cents in stamps, postal note, express money order, and get one of these valuable books.

ARMORITE LEADS.

Armorite Iron Armored Interior Conduit has been endorsed by experts all over the country as the highest grade of iron armored interior conduit, and is now being used exclusively by many of the largest lighting and contracting companies in the United States.

ARCHITECTS

are rapidly realizing that iron armored conduit is the only kind that can be relied upon to give the necessary protection, and that it is only a matter of a short time before nothing but IRON armored will be allowed. "Armorite" is therefore meeting their highest approval on account of its advantages over anything heretofore on the market. . . . .

USE ONLY ARMORITE.

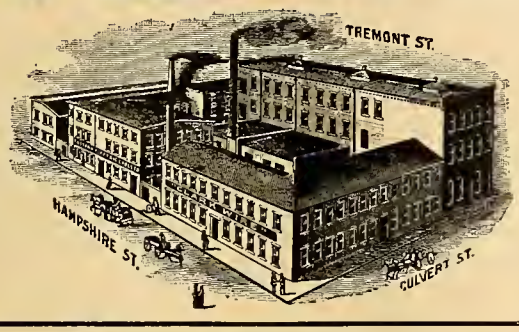
THE
"CLARK" WIRE.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.

TRADE MARK.



In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

NEW YORK OFFICE: 39 and 41 Cortlandt St.
FACTORY: Pawtucket, R. I.

WANTED.

Advertisers would like to correspond with a local telephone engineer, with a view of forming an engineering company to meet the demands of Anti-Bell exchange managers for designs of special apparatus, advice upon trouble, etc. Do not answer unless you can prove actual ability. Address "TELEPHONE," care WESTERN ELECTRICIAN, suite 510 Marquette Building, Chicago.

WANTED.

Position by man of many years experience in lamp making, well up in all details. Squirted cellulose filament a specialty. Understands silks and other filaments also. Apply to "C. M.," care M. Jones, 711 Broadway, South Boston, Mass.

WANTED.

Electrical engineer and works superintendent, with large and varied experience in designing and manufacturing all classes of direct and alternating apparatus to meet close competition, is open for engagement. Salary largely contingent on results. A1 references from former employers. Address "X Rays," care WESTERN ELECTRICIAN, Suite 510 Marquette Bldg., Chicago, Ill.

FOR SALE.

One National Alternator, 750 lights, with exciter; second hand, but in excellent condition. Address "M. C.," care of WESTERN ELECTRICIAN, 510 Marquette Building, Chicago.

FOR SALE.

100 single battery walnut backboard and battery boxes, good as new, 50c. each, in lots of one dozen. Peoples Telephone & Telegraph Co., Knoxville, Tenn.

FOR SALE.

Six 50-light compound wound dynamos of the highest grade at $115 each.

Six 4 horse power motors with automatic starting boxes at $125 each.

Accurate and reliable voltmeters at $10. Write for particulars. HOLMES, PYOTT & CO., 13 N. Jefferson St., Chicago.

FOR SALE.

60-light compound wound dynamos and 5-horse power motors, all latest improvements, fully guaranteed. Write for prices.

GEO. D. WHITCOMB CO.,
92 to 96 East Ohio St., CHICAGO, ILL.

ELECTRIC LIGHT BIDS WANTED.

Sealed bids will be received on or before Monday, Sept. 14, 1896, at the office of the City Clerk, Oconto, Wis., for furnishing electric light to said city of Oconto.

Bids are to be for furnishing not less than fifty (50) 2,000 candle power arc lights burning all night and every night.

Lights to be furnished by Feb. 1, 1897, and the bids are to be for a ten (10) years' contract, and for a stated sum per annum for each light.

The city is to have the right to take any number of additional lights at same rate.

A certified check of $1,000, must accompany the bid and the city reserves the right to reject any or all bids.

By order of committee on electric lights.

C. A. BRIGDEN,
City Clerk.

Oconto, Wis., Aug. 12, 1896.

DON'T THINK

That you can keep posted as to what is going on in the western electrical field without reading the Western Electrician. It is the electrical newspaper, and if you are not a subscriber you will find it to your advantage to become one at once.

$3.00 per year;
$1.50 for six months.

ELECTRICIAN PUBLISHING CO.,
Suite 510 Marquette Bldg., CHICAGO.

To Electrical and Steam Contractors.

Sealed proposals will be received by the Superintendent of Public Property of the State of Wisconsin, up to twelve o'clock noon, of Thursday, August 27th, 1896, for the material and labor necessary for the construction of an electric lighting plant, with all necessary appurtenances, as per complete plans and specifications on file in the office of the Superintendent of Public Property, Madison, Wisconsin; also in the office of Charles G. Armstrong, consulting engineer, 1306-1307 Great Northern Building, Chicago, Ill.

Bids must be accompanied by a certified check in the sum of 2 per cent. of the amount of the bid, payable to the order of the Superintendent of Public Property, to be forfeited to the State of Wisconsin, in case the bidder or bidders fail to enter into a contract with the State, and furnish a satisfactory bond for the proper construction of the same within ten days after the acceptance of their proposal.

Bids must be sealed and directed to C. E. Morley, Superintendent of Public Property, and must be plainly marked on the envelope, "Proposals for Electric Lighting Plant for the State Capitol, Madison."

The Superintendent of Public Property reserves the right to accept any bid or combination of bids, or to reject any or all bids which he may deem to the advantage of the State.

Witness my hand at the Capitol, in the city of Madison, this eighth day of August, 1896.

C. E. MORLEY,
Superintendent of Public Property.

FOR SALE.

1,500 tons 60-lb. relaying rails; 1,000 tons 75-lb. relaying rails; 800 tons 45-lb. relaying rails. 30 electric cars in good order. THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

The Electric Motor and Its Applications.

BY T. C. MARTIN AND JOSEPH WETZLER.

THIRD EDITION.

With an Appendix by Dr. Louis Bell, bringing the book down to date.

Cloth, 315 large quarto pages, 353 Illustrations. Price, $3.00.

The wealth of information contained in the three hundred and odd large double-column pages of this important work is equaled in few special technical treatises, even those of a professedly exhaustive character. More than one hundred different motors are described and illustrated—many in great detail—and the different applications are similarly fully treated. Many of the illustrations are full page, and the details of construction, particularly of armatures, are fully illustrated. The treatment is simple, clear and concise, and little mathematics is employed, the work being essentially of a practical and largely of a descriptive character. The section on alternating motors resumes in a simple manner without mathematical formulæ, the principles upon which they are based, and that on thermo-magnetic motors treats this interesting class in greater detail than can be found in any other publication. An interesting feature is the historical method of treatment, by means of which the different steps in the advance of theories and design can be clearly traced, and the varying results of explorations in many directions instructively followed.

CONTENTS.

Chapter I. Elementary Considerations.—Chapter II. Early Motors and Experiments in Europe.—Chapter III. Early Motors and Experiments in America.—Chapter IV. The Electrical Transmission of Power.—Chapter V. The Modern Electric Railway and Tramway in Europe.—Chapter VI. The Modern Electric Railway and Street-car Line in American.—Chapter VII. The Use of Storage Batteries with Electric Motors for Street Railways.—Chapter VIII. The Industrial Application of Electric Motors in Europe.—Chapter IX. The Industrial Application of Electric Motors in America.—Chapter X. Electric Motors in Marine and Aërial Navigation.—Chapter XI. Telpherage.—Chapters XII, XIII. Latest American Motors and Motor Systems.—Chapter XIV. Latest European Motors and Motor Systems.—Chapter XV. Alternating Current Motors.—Chapter XVI. Thermo-magnetic Motors.—Appendix. The Development of the Electric Motor since 1888.

THE NEW AMERICAN LEADS.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half gate than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

WATER WHEELS

For heads of 3 feet to 2000 feet.
Specially designed and adapted to
ELECTRIC POWER AND LIGHTNING PLANTS.

Securing a high guaranteed percentage and great steadiness of motion, under variable loads. An unequaled concentration of power, and an unprecedented high velocity. Its quickly operating balanced gates, affords prompt and fine regulation by governor. Satisfaction guaranteed where others fail. Write for catalogue, and state your wants.

JAMES LEFFEL & CO., Springfield, Ohio, U. S. A.

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 5,000 of the new.

Electrician Publishing Co.,
Suite 510 Marquette Building, CHICAGO.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

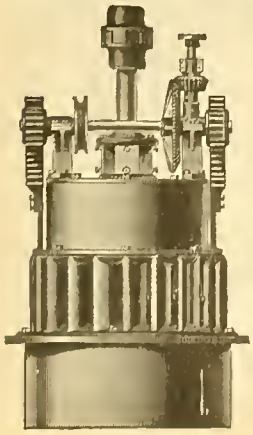
The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY, - - - Suite 510 Marquette Building, Chicago, Ill.



THE McCORMICK TURBINE,

On Vertical or Horizontal Shaft,
Especially Adapted for Electric Work.

Gives more power per diameter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH, York, Pa.

Estimates furnished for complete power plants and results guaranteed.

DOMESTIC Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Electrician Publishing Co.,

Suite 510 Marquette Bldg., CHICAGO.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either grey iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties in metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

Sent postpaid on receipt of price.

ELECTRICIAN PUBLISHING CO.,

SUITE 510 MARQUETTE BUILDING, CHICAGO.

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

THE LATEST AND MOST PRACTICAL BOOK ON TELEPHONY? IT IS

THE TELEPHONE HAND-BOOK,

BY HERBERT LAWS WEBB,

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London.
Author of "A Practical Guide to the Testing of Insulated Wires and Cables."
Joint Author of "Electricity in Daily Life."

146 PAGES. 138 ILLUSTRATIONS. CLOTH. HAND-BOOK SIZE. PRICE, POSTAGE FREE, $1.00.

CONTENTS:

The Invention of the Telephone. Sound Waves. Articulate Speech. Electric Telephony. The Bell Telephone. The Microphone. Current Induction. Electromagnetic Induction. The Induction Coil; its use in the Telephone Transmitter. The Complete Telephone Circuit. Magnet Telephones. The Bell Telephone Receiver. Other Forms of Magnetic Telephones. The Gower, Ader and D'Arsonval Receivers. Mercadier's Bi-telephone, The Siemens, Kotyra, Neumayer and Bottcher Receivers. Carbon Transmitters. The Blake Transmitter. The Long-distance Transmitter. The Solid-back Transmitter. The Berliner Transmitter. The Cuttriss Transmitter. Various European Transmitters. The Efficiency of Carbon Transmitters. Batteries for Telephone Work. Open Circuit Batteries. Closed Circuit Batteries. The Practical Management of Batteries. Magneto Bells. Automatic Switches. Telephone Line Construction. Metallic Circuits. Underground Wires. Lightning Arresters. Inside Wiring. Installation of Telephone Instruments. Inspection and Maintenance. The Condenser; its use in Telephony. Electromagnetic Retardation. Exchange Working. Small Exchanges. Party Lines. The Bridging Bell. Long Distance Telephony. Duplex Telephony. Simultaneous Telegraphy and Telephony. Appendix.

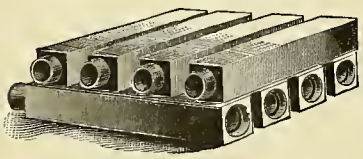
WILLIAMSPORT WOODEN PIPE CO.,



MANUFACTURERS OF

WOODEN CONDUIT,

UNDER CHESNUT PATENT.

Write for Information and Save Money.

WILLIAMSPORT, PA.

AN EXTENSIVE AND IMPROVED CREOSOTING WORKS ATTACHED TO THE PLANT.

For underground electrical purposes the conduit produced under this process is the most practical, the most durable and the most economical of any conduit on the market.

This conduit is now being used in the leading cities, and the best of references furnished on application.

We manufacture a high grade Knife Switch for switchboard work. We call it the E Switch.

A quick break switch, made in sizes from 50 amperes capacity to 800 amperes. They will be listed in our new catalog. We manufacture arc and incandescent dynamos and direct current motors. Also arc lamps.

We have in stock in our Chicago Store

WAITING FOR YOUR ORDERS

Sockets, Switches, Cut-Outs,
Tubes and Insulators,
Shawmut Fuse Wire and Knife Switches,
Bells, Annunciators,
Batteries, Push Buttons,
Fan Motors, Electric Supplies of all Kinds.

Western Electric Company.

Chicago. New York.

ELECTRIC LAMP SIGNS....

NEW ERA IN ELECTRIC ADVERTISING.

Each lamp is a single letter, which greatly simplifies the construction of a sign, and permits an unlimited advertising display. This sign is low-priced, economical of operation, easily read, very conspicuous, and may be changed in a moment from one form of words to another.

We manufacture High Grade Incandescent Lamps. Lamps of any voltage furnished.

Ask your NEAREST SUPPLY HOUSE for Sample or write

DICKINSON ELECTRIC SUPPLY CO.,

High Grade Incandescent Lamps,

American Tract Society Building, NO. 150 NASSAU STREET, NEW YORK.

The "H. W. J." Electric Car Heater.

(PATENTED.)

Simplicity—Effectiveness—Durability—Economy.

No coils to short-circuit or break, no oxidation, perfect air circulation, easily controlled and regulated by patented knife switch. Adjustable to three different degrees of heat. Prices, etc., on application. . . . . .

H. W. JOHNS MANUFACTURING CO., 240-242 Randolph Street, CHICAGO, ILL.

New York. Philadelphia. Boston.

SIEMENS & HALSKE ELECTRIC COMPANY OF AMERICA,

——MANUFACTURERS OF——

Direct Current, Multipolar, Slow Speed, External Armature Generators and Motors, especially adapted for Direct Connection.

(Type I)—In sizes from 20 to 2,000 H. P.

Direct Current, Multipolar, Medium Speed, Internal Armature Generators and Motors adapted for Belting.

(Type A.)—In sizes from 10 to 300 H. P.

Direct Current, Bipolar, Medium Speed, Internal Armature Generators and Motors adapted for Belting.

(Type L. H.)—In sizes from 5 to 130 H. P.

Direct Current Boosters, absolutely controlled by U. S. Patents granted to Siemens & Halske Electric Company.

SIEMENS' BAND ARC LAMPS FOR DIRECT AND ALTERNATING CURRENT, ELECTRIC MINING LOCOMOTIVES, STEAM LOCOMOTIVES, ETC., ETC.

COMPLETE ELECTRIC RAILWAY EQUIPMENTS UNDER SIEMENS' PATENTS:

Siemens' Underrunning Trolleys.

The Siemens Contact Bar is safer than the ordinary trolley, and the overhead construction is less costly. Dr. Ernst Werner von Siemens was the pioneer in Electric Traction. He built his first Electric Railway in 1879. Write for Catalogues and further information to

SIEMENS & HALSKE ELECTRIC CO. OF AMERICA, 98 Jackson St., Chicago.

WE'RE COMING

ELECTRIC BRAKE.

MONTGOMERY WARD & CO., 111 to 120 Michigan Ave., Chicago, have started out a magnificent private car, built for their use, equipped with a crew of from four to six men, and propose to cover the entire country West and South of Chicago.

Their Electric Horseless Carriage will accompany the car and will be exhibited in each town en route. Musical, Stereopticon and Phonograph free entertainments will also be given. The scheme is purely an advertising one and is indicative of the character of The Great Mail Order House.

The advantages of buying goods of every kind direct from them by means of mail orders, thus saving middlemen's profits, will be fully illustrated and will be supplemented by their very elaborate catalogues, the largest of which contains 700 pages, 15,000 illustrations, and will be sent upon receipt of 15 cents to partially pay postage or expressage.

MONTGOMERY WARD & CO.

CHICAGO.

TO YOUR TOWN!

ELECTRIC MAIL PHAETON.

A STATEMENT.

The American Electric Vehicle Company, 447 Wabash Ave., Chicago, begs hereby to announce to possible customers that it is now, **to-day**, in position to fill orders for the most advanced and artistic styles of electric vehicles. We make this statement, as many people look upon the new industry of electric vehicle manufacture as one in the experimental stage. We wish it distinctly understood that we are not only prepared to fill orders, but are ready to demonstrate on demand the simplicity and perfection of the equipment which we offer for sale. As evidence backing the above plain language we beg to state that already we have sold our electric vehicles to Montgomery Ward & Co., Chicago; Mr. H. McCormick, Chicago; Mr. Thos. B. Bryan, Chicago; Mr. W. G. Press, Chicago, and others whose names, for good business reasons, as yet we do not care to publish. Catalogue furnished on request. **Cost of operation, per mile, one cent.**

MANUFACTURED BY

AMERICAN ELECTRIC VEHICLE CO.

CHICAGO.

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

Long Life.

Say! Mr. Contractor, have you ever stopped

To figure what it costs you to put in shelves, boxes, etc., besides running additional battery circuit necessary in installing the ordinary form of cells? If you have, you are aware that by using the Hang-Up Dry Battery you always save enough in labor and material to pay cost of battery on every contract.

THEY DON'T DRY OUT.

Especially adapted to Telephone and Street Railway Work.

"GETS THERE JUST THE SAME."

The Packard Lamp not only holds its record for efficiency, long life and brilliancy, but is

IMPROVING ITS RECORD

each season, and has more friends among intelligent lamp users to-day than at any time during its history. There is . . . . .

A REASON FOR THIS

and it is found in the fact that Packard Lamps can be relied upon for uniform excellence and they never disappoint.

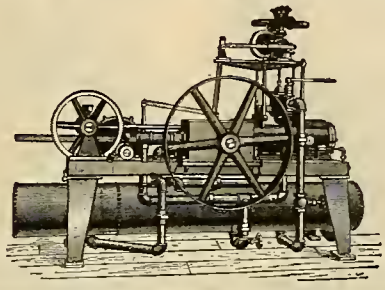
GENTLEMEN:—We have one of your Governors in use at our power house at Millers Falls, Mass., taking care of two water-wheels to perfection, regulating the power *within a few volts*. We took out one Governor and replaced it with a LOMBARD GOVERNOR which gives *perfect satisfaction*. Yours truly, MONTAGUE ST. RY. CO.,
(Signed) H. C. GARFIELD, Supt.



Sold on trial and absolutely guaranteed to hold wheel speed to satisfaction of purchaser, irrespective of sudden changes of load.

Send us a description of your water wheel plant.

Proposals Wanted for Steam and Electrical Machinery, Pole Line, Etc., for Municipal Electric Lighting Plant for City of Madison, Wis.

Sealed proposals will be received at the office of the City Clerk of the City of Madison, Wis., until noon of September 22, 1896, for furnishing all the labor and materials for the construction of the necessary boilers, engines, dynamos, lamps, pole line, etc., for a complete electric lighting plant for said City, in accordance with the plans and specifications on file with the City Clerk.

All bids must be addressed "City Clerk, Madison, Wis.," and endorsed on the outside of envelope, "Bids for Electric Lighting Plant," and the division of the specifications for which the proposal is made.

Each bidder must deposit with his bid a certified bank check for an amount equal to five per cent. of the total amount of his proposal, payable to the order of the City Treasurer, which sum shall be forfeited to the City of Madison, Wis., in case the bidder refuses or neglects to enter into a contract with said City pursuant to the terms of his bid and the plans and specifications on file (subject to confirmation by the City Council) within five days after he shall have been notified of the acceptance of his proposal or bid.

Checks deposited with rejected bids will be returned to owner on demand.

The bidder whose bid is accepted will be required to furnish with his contract a good and sufficient bond to be approved by the Mayor and the Special Lighting Committee to the City of Madison, Wis., in such sum not to exceed the amount of the bid as the Mayor and Special Lighting Committee shall determine, conditioned on the full and faithful performance of his part of the contract. Another bond for the full amount of the contract running to the people of the State of Wisconsin will be required, conditioned for payment of wages earned and material furnished in the performance of the contract, to be approved by the Mayor and Special Lighting Committee. On the proper execution of the contract and bonds, the guarantee deposit will be returned to the Contractor.

Copies of the specifications can be obtained from the City Clerk, or may be seen at the office of Frank R. Rae, Engineer, 134 Monroe Street, Chicago, Ill.

The Council expressly reserves the right to reject any or all proposals, and to waive any irregularity in any proposal.

A. A. DYE, Mayor.
O. S. NORSMAN, City Clerk.

Dated at Madison, Wis., this 26th day of August, A. D. 1896.

ELECTRIC LIGHT BIDS WANTED.

Sealed bids will be received on or before Monday, Sept. 14, 1896, at the office of the City Clerk, Oconto, Wis., for furnishing electric light to said city of Oconto.

Bids are to be for furnishing not less than fifty (50) 2,000 candle power arc lights burning all night and every night.

Lights to be furnished by Feb. 1, 1897, and the bids are to be for a ten (10) years' contract, and for a stated sum per annum for each light.

The city is to have the right to take any number of additional lights at same rate.

A certified check of $1,000, must accompany the bid and the city reserves the right to reject any or all bids.

By order of committee on electric lights.

C. A. BRIGDEN,
City Clerk.

Oconto, Wis., Aug. 12, 1896.

Inside Facts

Most wheelmen know a little about mechanics. They ought to know more. They ought to know all the inside facts about the machine they are riding.

A bicycle is a delicately adjusted piece of mechanism. The rider who knows all about his wheel will not have much use for the man who does repairing. He will spend precious little money for repairs, adjustments and "what not."

Every wheelman ought to read **Lord's Power and Machinery Magazine.** It is devoted to Mechanics, Engineering and Machinery. It is full of facts, opinions and theories from the world's best writers on the subjects to which it is devoted.

Published monthly at $1 a year. No wheelman can possibly read it a year without getting more than a dollar's worth of information. Sample copy sent for 10 cents. Write to us.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines; The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and it produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

Sent postpaid on receipt of price.

ELECTRICIAN PUBLISHING CO.,

SUITE 510 MARQUETTE BUILDING, CHICAGO.

All janitors know

—that in large Office Buildings the man in No. 6 is always "too hot" while "No. 16" as constantly growls over being "too cold."

Where **The Webster System of Steam Heating** is installed, every man in the building can regulate his own Radiator to suit his individual whims. This feature is an immense advance beyond ordinary heating systems—one that pleases the tenant and greatly smoothes the janitor's pathway. We issue a very lucid little booklet that fully tells the story of this heating system. Would you like a copy?

DOMESTIC Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him to increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

CHICAGO.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, brooze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

The WESTERN ELECTRICIAN unless you want to be made fully aware of what is going on in the electrical field. . . . . .

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

TAUGHT BY MAIL THOROUGH PRACTICAL

ALPHA ELECTRIC LAMP SIGNS....

NEW ERA IN ELECTRIC ADVERTISING.

Each lamp is a single letter, which greatly simplifies the construction of a sign, and permits an unlimited advertising display. This sign is low-priced, economical of operation, easily read, very conspicuous, and may be changed in a moment from one form of words to another.

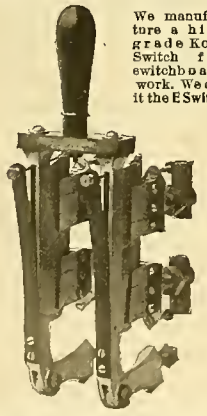
We manufacture High Grade Incandescent Lamps. Lamps of any voltage furnished.

Ask your NEAREST SUPPLY HOUSE for Sample or write

DICKINSON ELECTRIC SUPPLY CO.,

High Grade Incandescent Lamps,

American Tract Society Building, NO. 150 NASSAU STREET, NEW YORK.



We manufacture a high grade Knife Switch for switchboard work. We call it the E Switch.

We have in stock in our Chicago Store

WAITING FOR YOUR ORDERS

- Sockets, Switches, Cut-Outs,
- Tubes and Insulators,
- Shawmut Fuse Wire and Knife Switches,
- Bells, Annunciators,
- Batteries, Push Buttons,
- Fan Motors, Electric Supplies of all Kinds.

A quick break switch, made in sizes from 50 amperes capacity to 800 amperes. They will be listed in our new catalog. We manufacture arc and incandescent dynamos and direct current motors. Also arc lamps.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

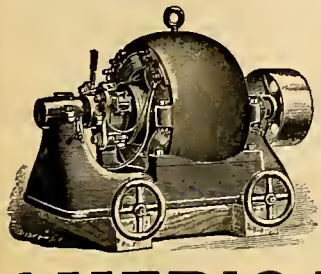
The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY, - - - Suite 510 Marquette Building, Chicago, Ill.

AMERICAN-BALL ENGINE.



The result of twenty-five years' experience with four thousand engines, designed and built by Mr. Frank H. Ball.

The latest development in practical steam engineering. New features, improved design and finish, but the same old valve that has saved thousands of tons of coal in the last quarter of a century, and is the only form of valve used in single valve automatics, that follows its own wear, and never leaks.

We also build a full line of multipolar dynamos and motors, and our new six-pole generators are adapted to our **American-Ball Engine,** making complete and symmetrical generating units.

AMERICAN ENGINE CO., Bound Brook, N. J.

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

WESTERN ELECTRICIAN

Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been **FOUND** that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the **NORTH POLE.**

THE LATEST BOOK.

"ELECTRIC LIGHTING,"

A PRACTICAL EXPOSITION OF THE ART FOR THE USE OF

Engineers, Students and Others Interested in the Installation or Operation of Electrical Plants.

BY FRANCIS B. CROCKER,

Professor of Electrical Engineering, Columbia University, New York.

Price $3, Prepaid. - Practical and Up-to-Date.

Just the Book you want. 450 Pages, over 150 Illustrations. Read the

TABLE OF CONTENTS:

Chapter I, Introduction; Chapter II, History of Electric Lighting; Chapter III, General Units and Measures; Chapter IV, Classification and Selection of Electric Lighting System; Chapter V, The Location and General Arrangement of Electric Lighting Plants; Chapter VI, Buildings for Electric Lighting Plants; Chapter VII, Possible Sources of Electrical Energy; Chapter VIII, The Steam Engine, History and General Principles; Chapter IX, Steam Boilers for Electric Lighting; Chapter X, Steam Engines for Electric Lighting, General Construction; Chapter XI, Typical Forms of Steam Engine for Electric Lighting; Chapter XII, Steam Engines for Electric Lighting, Selection, Installation and Management; Chapter XIII, Gas, Oil and Hot Air Engines; Chapter XIV, Water Wheels and Windmills; Chapter XV, Mechanical Connections between Engines and Dynamos, Direct Coupling, Belting and Shafting; Chapter XVI, Toothed, Friction and Other Gearing; Chapter XVII, Principles. Construction and Management; Chapter XXI, Applications of Accumulators in Electric Lighting; Chapter XXII, Switchboards, Including Switches, Fuses and Circuit-Breakers; Chapter XXIII, Electrical Measuring Instruments; Chapter XXIV, Lightning Arresters.

Every Engineer and Electrician who desires to thoroughly master the Art of Electric Lighting should have a copy of this book. Sent promptly.

ELECTRICIAN PUBLISHING COMPANY, Suite 510 Marquette Building, CHICAGO.

PARANITE WIRE

never loses its hold on users who are looking for an article that is in every way reliable. Its insulation resistance remains at the highest point under trying conditions and shows no deterioration.

We have never cheapened the quality of the insulating compound and it is as good to-day as when Paranite was first placed on the market.

HENCE ITS POPULARITY.

Owing to improved methods of manufacture and the immense amount of Paranite now used we have been able to reduce the cost and are giving our customers the benefit of the reduction.

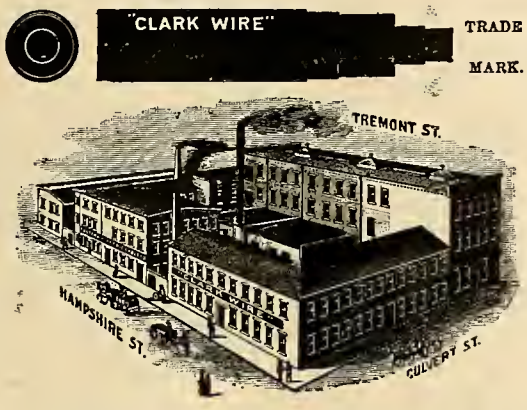
THE

"CLARK" WIRE.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.



In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

Proposals Wanted for Steam and Electrical Machinery, Pole Line, Etc., for Municipal Electric Lighting Plant for City of Madison, Wis.

Sealed proposals will be received at the office of the City Clerk of the City of Madison, Wis., until noon of September 22, 1896, for furnishing all the labor and materials for the construction of the necessary boilers, engines, dynamos, lamps, pole line, etc., for a complete electric lighting plant for said City, in accordance with the plans and specifications on file with the City Clerk.

All bids must be addressed "City Clerk, Madison, Wis.," and endorsed on the outside of envelope, "Bids for Electric Lighting Plant," and the division of the specifications for which the proposal is made.

Each bidder must deposit with his bid a certified bank check for an amount equal to five per cent. of the total amount of his proposal, payable to the order of the City Treasurer, which sum shall be forfeited to the City of Madison, Wis., in case the bidder refuses or neglects to enter into a contract with said City pursuant to the terms of his bid and the plans and specifications on file (subject to confirmation by the City Council) within five days after he shall have been notified of the acceptance of his proposal or bid.

Checks deposited with rejected bids will be returned to owner on demand.

The bidder whose bid is accepted will be required to furnish with his contract a good and sufficient bond to be approved by the Mayor and the Special Lighting Committee to the City of Madison, Wis., in such sum not to exceed the amount of the bid as the Mayor and Special Lighting Committee shall determine, conditioned on the full and faithful performance of his part of the contract. Another bond for the full amount of the contract running to the people of the State of Wisconsin will be required, conditioned for payment of wages earned and material furnished in the performance of the contract, to be approved by the Mayor and Special Lighting Committee. On the proper execution of the contract and bonds, the guarantee deposit will be returned to the Contractor.

Copies of the specifications can be obtained from the City Clerk, or may be seen at the office of Frank B. Rae, Engineer, 134 Monroe Street, Chicago, Ill.

The Council expressly reserves the right to reject any or all proposals, and to waive any irregularity in any proposal.

A. A. DYE, Mayor.
O. S. NORSMAN, City Clerk.

Dated at Madison, Wis., this 26th day of August, A. D. 1896.

ELECTRIC LIGHT BIDS WANTED.

Sealed bids will be received on or before Monday, Sept. 14, 1896, at the office of the City Clerk, Oconto, Wis., for furnishing electric light to said city of Oconto.

Bids are to be for furnishing not less than fifty (50) 2,000 candle power arc lights burning all night and every night.

Lights to be furnished by Feb. 1, 1897, and the bids are to be for a ten (10) years' contract, and for a stated sum per annum for each light.

The city is to have the right to take any number of additional lights at same rate.

A certified check of $1,000, must accompany the bid and the city reserves the right to reject any or all bids.

By order of committee on electric lights.
C. A. BRIGDEN,
City Clerk.

Oconto, Wis., Aug. 12, 1896.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding.
Giving correct sizes of wire, dimensions of iron, etc.
Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers. Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony Appendix.

Standard Telephone and Electric Co.
MADISON - - WISCONSIN,
MANUFACTURERS OF THE

Standard Loud-Speaking, Long-Distance and Exchange Telephone.
Perfect in Detail, of Highest Efficiency and Best Possible Electrical and Mechanical Construction.
Equipped with **Our New Magneto Bell** provided with specially powerful Generator having large field magnets of best quality of magnetic steel, laminated armatures with ample wire space, and combining the qualities of large quantity and high voltage; polarized bells with centrally pivoted armatures (the patent on same having now expired) and high co-efficient of self-induction in proportion to winding, the whole adapted to meet the most exacting requirements of service.
Will ring bells on long lines of high resistance. Will ring a large number of bells in series on short lines. Will ring on a line various makes of bells with different windings. Will work with any make of switchboard. Will drop a shutter on long lines, etc., etc.
Sole Licensees for sale of **Milde Battery Transmitter** in the United States. Patent granted April 17th, 1894. For simplicity, small dimensions, entire multi-contact, and powerful transmission, it has no equal. No adjustment required. Will not pack or get out of order.
Standard Telephone Exchange Switchboards
Manufactured and controlled by us are the most rapid and efficient apparatus of the kind now before the public, embracing novel and original features possessed by no others; require where power generator is used but three moves to answer a subscriber's call, ring number wanted, and connect the lines. Estimates for complete equipment of exchanges and toll line systems promptly furnished.
Correspondence Solicited. Address

THE LATEST AND MOST PRACTICAL BOOK ON TELEPHONY? IT IS

THE TELEPHONE HAND-BOOK,

BY HERBERT LAWS WEBB,

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London.
Author of "A Practical Guide to the Testing of Insulated Wires and Cables."
Joint Author of "Electricity in Daily Life."

146 PAGES. 138 ILLUSTRATIONS. CLOTH. HAND-BOOK SIZE. PRICE, POSTAGE FREE, $1.00.

CONTENTS:

The Invention of the Telephone. Sound Waves. Articulate Speech. Electric Telephony. The Bell Telephone. The Microphone. Current Induction. Electromagnetic Induction. The Induction Coil; its use in the Telephone Transmitter. The Complete Telephone Circuit. Magnet Telephones. The Bell Telephone Receiver. Other Forms of Magnetic Telephones. The Gower, Ader and D'Arsonval Receivers. Mercadier's Bi-telephone, The Siemens, Kotyra, Neumayer and Bottcher Receivers. Carbon Transmitters. The Blake Transmitter. The Long-distance Transmitter. The Solid-back Transmitter. The Berliner Transmitter. The Cuttriss Transmitter. Various European Transmitters. The Efficiency of Carbon Transmitters. Batteries for Telephone Work. Open Circuit Batteries. Closed Circuit Batteries. The Practical Management of Batteries. Magneto Bells. Automatic Switches. Telephone Line Construction. Metallic Circuits. Underground Wires. Lightning Arresters. Inside Wiring. Installation of Telephone Instruments. Inspection and Maintenance. The Condenser; its use in Telephony. Electromagnetic Retardation. Exchange Working. Small Exchanges. Party Lines. The Bridging Bell. Long Distance Telephony. Duplex Telephony. Simultaneous Telegraphy and Telephony. Appendix.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

	Head	Rev. per Min.	Cu. Ft. per Sec.	H. P.	Per Cent.
Whole Gate	16.05	119.17	141.58	205.27	79.76
⅞ "	16.42	122.00	127.18	195.19	82.58
¾ "	16.78	117.33	112.60	175.74	82.18

THE McCORMICK TURBINE,

On Vertical or Horizontal Shaft,
Especially Adapted for Electric Work.

Gives more power per diameter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH, York, Pa.

Estimates furnished for complete power plants and results guaranteed.

DOMESTIC
Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

National Ore & Reduction Co.,
ST. LOUIS, MO.

Branch Agencies and Supply Offices:

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 6½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 6 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to $0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 600 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lighting, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised ..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

Hospitalier, E.—Domestic Electricity for Amateurs. Translated from the French. With additions by C. J. Wharton. With illustrations.....$2.50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 662 pages, and 670 illustrations $5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivision and Distribution. A practical handbook. Third edition.....$3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated.$0.50
[Vol. 96 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations, 8vo. cloth. London, 1892....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather $1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations.....$2.50

Lockwood, T. D.—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

Lockwood, T. D.—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1.00

Meadowcroft, W. H.—The A. B. C. of Electricity. 36 Illustrations.....$0.50

Martin, T. C.—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition.....$4.00

Martin, T. C. and Wetzler, J.—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations.....$3.00

Maver, and Davis, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

McClure, J. B.—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc..$1.00

Niaudet, Alfred.—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated.....$2.50

Noll, Augustus.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

Pope, Franklin Leonard.—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged.....$1.50

Prindle, H. B.—A Popular Treatise on the Electric Railway of to-day. Fully illustrated.....$0.25

Russell, Stuart A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

Salomons, Sir David.—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand-book. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893.....$1.50

Sloane, T. O'Conner.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated.....$1.00

Sloane, T. O'Connor.—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations.$3.00

Sloane, T. O'Connor.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys $1.00

Sloane, T. O'Connor.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

Tesla, Nikola.—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author Illustrated.....$1.00

Tesla, Nikola.—Lectures on the Electro-Magnet. Illustrated, ...$1.00

Thurston, Prof. R. H.—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates.....$1.50

Thomson, Prof. Elihu.—What is Electricity? Illustrated.$0.25

Thompson, Sylvanus P.—Dynamo-Electric Machinery. A Series of Lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66).....$0.50

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

The Fire Insurance Underwriters

Have indorsed the "Pioneer" enclosed arc lamp because it is a **"Perfect Spark Arrester."** Besides, by burning 100 to 150 hours without change of carbons, each "Pioneer" lamp saves $15 to $20 per annum. It is shadowless, steady, noiseless, simple and safe.

Up-to-date merchants are discarding the old short hour open arc lamps and substituting our "Pioneer."

WESTERN ELECTRICIAN

Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been **FOUND** that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the **NORTH POLE.**

EDDY GENERATORS.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 80 Pages. 39 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

Proposals for Lighting.

The Council of the City of Manistee, Mich., will receive sealed proposals until October 15, 1896, for lighting the streets of said city with 100 arc electric lights. Particulars will be furnished on application to

JAS. L. SIBBEN, City Clerk.
Manistee, Mich.

THE TOWN OF CICERO.

Proposals Wanted.

Sealed proposals in duplicate (said proposals to be addressed as follows: Original to the Town Clerk, Duplicate to the President of the Town, to whom it must be delivered), are invited for an extension to the Arc Lighting System; said work to include the furnishing of one hundred and fifty (150) arc lights and furnishing and erecting the necessary poles and wires. Plans and specifications on file in the office of the Town Engineer, Austin, Illinois.

Bids will be received until 7:30 p. m., Monday, September 21st.

The Board of Trustees of the town of Cicero reserves the right to reject any or all bids.

J. R. DRENT, Town Clerk.

Proposals Wanted for Steam and Electric Machinery, Pole Line, Etc., for Municipal Electric Lighting Plant for Village of Bryan, Ohio.

Sealed proposals will be received at the office of the Village Clerk of the Village of Bryan, Ohio, until noon of Monday, October 5th, 1896, for furnishing all the labor and materials for the construction of the necessary Boilers, Engines, Dynamos, Lamps, Pole Lines, etc., for a complete electric lighting plant for said village in accordance with the plans and specifications on file with the Village Clerk.

All bids must be addressed, "Village Clerk, Bryan, Ohio," and endorsed on the outside of envelope, "Bids for Electric Lighting Plant," and the division of the specifications for which the proposal is made.

Each bidder must deposit with his bid a certified bank check for an amount equal to five per cent. of the total amount of his proposal, payable to the order of the Village Treasurer of Bryan Ohio, which sum shall be forfeited to the Village of Bryan, Ohio, in case the bidder refuses or neglects to enter into a contract with said Village, pursuant to the terms of his bid and the plans and specifications on file (subject to confirmation by the City Council) within five days after he shall have been notified of the acceptance of his proposal or bid.

Checks deposited with rejected bids will be returned to owner on demand.

The bidder whose bid is accepted will be required to furnish with his contract a good and sufficient bond to be approved by the Mayor and the Lighting Committee of the Village of Bryan, Ohio, in such sum not exceeding the amount of the bid, as the Lighting Committee shall determine, conditioned on the full and faithful performance of his part of the contract. Another bond for the full amount of the contract running to the people of the State of Ohio will be required, conditioned for payment of wages earned and material furnished in the performance of the contract, to be approved by the Lighting Committee and Common Council of the Village of Bryan, Ohio. On the proper execution of the contract and bonds the guarantee deposit will be returned to the contractor.

Copies of the specifications can be obtained from the Village Clerk, or may be seen at the office of Frank B. Rae, Engineer, 134 Monroe St., Chicago, Ill.

The Council expressly reserves the right to reject any or all proposals, and to waive any irregularity in any proposal.

J. W. NELSON, Mayor.
SILAS PEOPLES, Clerk.
Dated at Bryan, Ohio, this 11th day of September, A. D. 1896.

Proposals for Street Lighting.

Sealed proposals will be received by the Clerk of the Village of La Grange, Ill., until 8 p. m., Oct. 5, 1896, for lighting the streets of said Village with electric lights for a term of years. There will be required not less than 200 incandescent lights of 20 to 32 c. p. or 20 arc lights of 8 0 to 2,000 c. p.

A franchise for private and commercial lighting will be granted to the successful bidder.

All proposals must be on a form furnished by the bidder and shall be accompanied with a certified check for $100 payable to the Village Clerk.

General plan of lighting, specifications and other information may be obtained of the Village Clerk, La Grange, or W. B. Ewing, Village Engineer, 1548 Marquette Building, Chicago.

The Village reserves the right to reject any or all bids, or to waive any informality when to the in erest of the Village.

A. H. HURD, Village Clerk.

W. B. EWING, Village Engineer,
1548 Marquette Building, Chicago.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony Appendix.

Published and for sale by ELECTRICIAN PUBLISHING CO.; Suite 510 Marquette Building, CHICAGO.

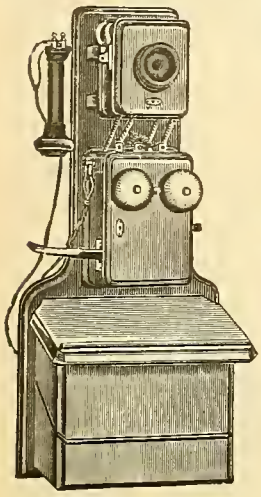
VIADUCT MFG. COMPANY



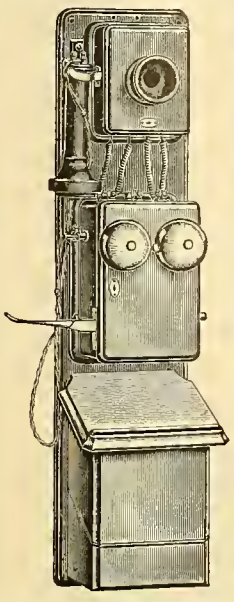
Is the **oldest** concern of the kind in this country, with one exception, manufacturing

Magneto Bells, Telephones, District Telegraph Messenger Boxes

and other appliances.

It has had 18 years' experience; 5 years as licensed manufacturer of the American Bell Telephone Company. It has made more Magneto Bells than all the other manufacturers in the country. Its standard work is known by all experienced telephone men.

The works are located at the Relay Station, Baltimore & Ohio Railroad, and run by water power.



It manufactures all of its own woodwork, as well as brass, iron, steel and everything connected with its output.

Send for new catalogue and mention this paper.

Standard Telephone and Electric Co.

MADISON - - WISCONSIN,

MANUFACTURERS OF THE

Standard Loud-Speaking, Long-Distance and Exchange Telephone.

Perfect in Detail, of Highest Efficiency and Best Possible Electrical and Mechanical Construction.

Equipped with **Our New Magneto Bell** provided with specially powerful Generator having large field magnets of best quality of magnetic steel, laminated armatures with ample wire space, and combining the qualities of large quantity and high voltage; polarized bells with centrally pivoted armatures (the patent on same having now expired) and high co-efficient of self-induction in proportion to winding, the whole adapted to meet the most exacting requirements of service.

Will ring bells on long lines of high resistance. Will ring a large number of bells in series on short lines. Will ring on a line various makes of bells with different windings. Will work with any make of switchboard. Will drop a shutter on long lines, etc., etc.

Sole Licensees for sale of **Blake Battery Transmitter** in the United States. Patent granted April 17th, 1894. For simplicity, small dimensions, entire multi-contact, and powerful transmission, it has no equal. No adjustment required. Will not pack or get out of order.

Standard Telephone Exchange Switchboards

Manufactured and controlled by us are the most rapid and efficient apparatus of the kind now before the public, embracing novel and original features possessed by no others; require where power generator is used but three moves to answer a subscriber's call, ring number wanted, and connect the lines. Estimates for complete equipment of exchanges and toll line systems promptly furnished.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

IT'S ALL RIGHT.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made to the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

	Head	Rev. per Min.	Cu. Ft. per Sec.	H. P.	Per Cent.

DOMESTIC
Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationery Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 6½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding, 55 pages, 35 cuts and 6 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 page, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 89 illustrations.....$1.00

Bottone, S. R.—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to $0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways, Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised .$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations $3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

Hospitalier, E.—Domestic Electricity for Amateurs. Translated from the French. With additions by C. J. Wharton. With illustrations.....$2.50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 670 illustrations $5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivision and Distribution. A practical handbook. Third edition.....$3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated.$0.50
[Vol. 96 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather $1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 illustrations.....$2.50

Lockwood, T. D.—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

Lockwood, T. D.—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1.00

Meadowcroft, W. H.—The A. B. C. of Electricity. 36 Illustrations.....$0.50

Martin, T. C.—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition $4.00

Martin, T. C. and Wetzler, J.—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations.....$3.00

Maver, and Davis, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 53 illustrations $1.50

McClure, J. B.—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc..$1.00

Niaudet, Alfred.—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated.....$2.50

Noll, Augustus.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

Pope, Franklin Leonard.—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged.....$1.50

Prindle, H. B.—A Popular Treatise on the Electric Railway of to-day. Fully illustrated.....$0.25

Russell, Stuart A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

Salomons, Sir David.—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand-book. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893.....$1.50

Sloane, T. O'Conner.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated.....$1.00

Sloane, T. O'Connor.—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations.$3.00

Sloane, T. O'Connor.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys $1.00

Sloane, T. O'Connor.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

Tesla, Nikola.—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author. Illustrated.....$1.00

Tesla, Nikola.—Lectures on the Electro-Magnet. Illustrated, ...$1.00

Thurston, Prof. R. H.—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates.....$1.50

Thomson, Prof. Elihu.—What is Electricity? Illustrated.$0.25

Thompson, Sylvanus P.—Dynamo-Electric Machinery. A Series of Lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66) $0.50

Thompson, Sylvanus P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of.....$3.50

Thompson, Sylvanus P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 15mo. (Van Nostrand's Science Series, No. 75).....$0.50

Thompson, Sylvanus P.—Dynamo-Electric Machinery. Fourth edition, revised and rewritten. Numerous illustrations and 29 plates. 1,000 pages.....$6.00

Trevert.—How to Make Electric Batteries at Home. Illustrated.....$0.25

Urquhart.—Electro-Plating. A Practical Hand-book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions.....$2.00

Walker, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 15mo, boards. (Van Nostrand's Science Series, No. 93).$0.50

Webb, H. L.—A practical Guide to the Testing of Insulated Wires and Cables. Illustrated.....$1.00

Webb, Herbert Laws.—Telephone Hand-book, Illustrated. 12mo, cloth. Chicago, 1895.....$1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

The Ferris Wheel Co.
1131 THE ROOKERY.

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

GRIMSHAW WHITE CORE. Used exclusively for all Incandescent Lighting at World's Columbian Exposition.

RAVEN WHITE CORE. Used in some of the largest buildings in the United States.

WESTON Electrical Instrument Co.,

114-120 William St., NEWARK, N. J., U. S. A.

Illuminated Dial Station Instruments.

These instruments are based upon the same general principle and are just as accurate as our regular Standard Portable Direct Current Voltmeters and Ammeters, but are much larger, and the working parts are inclosed in a neatly designed, dust-proof cast-iron case which effectively shields the instruments from disturbing influences of external magnetic fields.

Weston Standard Illuminated Dial Station Ammeter, Style B.

Weston Standard

Portable Direct Reading Voltmeters and Millivoltmeters. Ammeters and Milammeters, Wattmeters and Voltmeters, for Alternating and Direct Current Circuits.

Our portable instruments are recognized as standards throughout the civilized world.

Our Semi-Portable Laboratory Standard Voltmeters and Ammeters are still better.

They are the most reliable, absolute standards for Laboratory use.

The NORTHERN ELECTRICAL MFG. CO.,

Madison, WIS.,

Manufacturers of MOTORS AND DYNAMOS.

Our machines will operate SUSPENDED from CEILING OVERHEAD or BOLTED DIRECT to SIDE WALL as readily as when occupying floor space in the ordinary manner. All bearings self-oiling. See our new patented device for CONNECTING MOTORS DIRECT TO LINE SHAFT SAVING BELTS, PULLEVS AND FLOOR SPACE.

CARPENTER ENAMEL RHEOSTATS.

Automatic Motor Starters.

All sizes. List price of 1 H. P. size, $13.00. Reliable. Fully guaranteed. Highly finished. Cheap.

We guarantee all our Cells.

MANUFACTURED BY

The Gordon-Burnham Battery Co.,

Reflections?

Yes! We are constantly making them. See them? We confess that this is our business. Our name indicates it. But they are always of the pleasing kind. This is the secret of our success, and the reason why we are the largest manufacturers of them the whole world over. As the days shorten we are in increased demand, but we aim always to be ready for any call.

WHEELER REFLECTOR CO.,

HARDTMUTH CORED CARBONS for Direct and Alternating Current ARC LAMPS.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.

AMERICAN CARBON CO.'S Plain and Coated CARBONS FOR SERIES ARC LIGHTING.

GENERAL WESTERN AGENTS.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.

Chicago Edison Co.,

DEALERS IN ELECTRIC LIGHTING SUPPLIES,

139 Adams Street, CHICAGO.

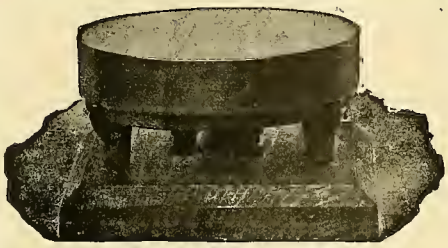
A GOOD THING.

AN ELECTRIC STOVE FOR $4.00.

No. 1701—Portable Stove—4½ inches diameter mounted on enamelled slate base—"Hot" in two minutes. Just the thing to boil an egg, warm the baby's milk, make a toddy or any hot drink. Suitable for a physician's office—sick room—apartment houses. Requires two amperes on 110-volt circuits; packed one in a box complete with cord and plug ready for use. State whether for Edison, Westinghouse or T.-H. sockets.

Send for one and try it.

For sale by all supply dealers or sent by express on receipt of price from any of the offices mentioned below.



WE MAKE THE BEST CAR HEATERS.

AMERICAN ELECTRIC HEATING CORPORATION,

GENERAL OFFICE: SEARS BUILDING, BOSTON.

Branch Offices: Havemeyer Building, New York. Monadnock Building, Chicago.

ELECTRIC LAMP SIGNS....

NEW ERA IN ELECTRIC ADVERTISING.

Each lamp is a single letter, which greatly simplifies the construction of a sign, and permits an unlimited advertising display. This sign is low-priced, economical of operation, easily read, very conspicuous, and may be changed in a moment from one form of words to another.

We manufacture High Grade Incandescent Lamps. Lamps of any voltage furnished.

Ask your NEAREST SUPPLY HOUSE for Sample or write

DICKINSON ELECTRIC SUPPLY CO.,

High Grade Incandescent Lamps,

American Tract Society Building, NO. 150 NASSAU STREET, NEW YORK.

We manufacture a high grade Knife Switch for switchboard work. We call it the E Switch.

A quick break switch, made in sizes from 50 amperes capacity to 800 amperes. They will be listed in our new catalog. We manufacture arc and incandescent dynamos and direct current motors. Also arc lamps.

We have in stock in our Chicago Store

WAITING FOR YOUR ORDERS

Sockets, Switches, Cut-Outs,
Tubes and Insulators,
Shawmut Fuse Wire and Knife Switches,
Bells, Annunciators,

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

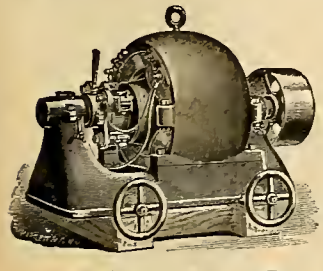
The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY, - - - Suite 510 Marquette Building, Chicago, Ill.

AMERICAN-BALL ENGINE.



The result of twenty-five years' experience with four thousand engines, designed and built by Mr. Frank H. Ball.

The latest development in practical steam engineering. New features, improved design and finish, but the same old valve that has saved thousands of tons of coal in the last quarter of a century, and is the only form of valve used in single valve automatics, that follows its own wear, and never leaks.

We also build a full line of multipolar dynamos and motors, and our new six-pole generators are adapted to our **American-Ball Engine,** making complete and symmetrical generating units.

AMERICAN ENGINE CO., Bound Brook, N. J.

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

WESTERN ELECTRICIAN Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been **FOUND** that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the **NORTH POLE.**

X-RAYS
FOR EVERYBODY.
By Edward Trevert.
Just off the Press. 80 Pages. 39 Illustrations.
Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.
Write us at once, enclosing 25 Cents in stamps, postal note, express money order, and get one of these valuable books.

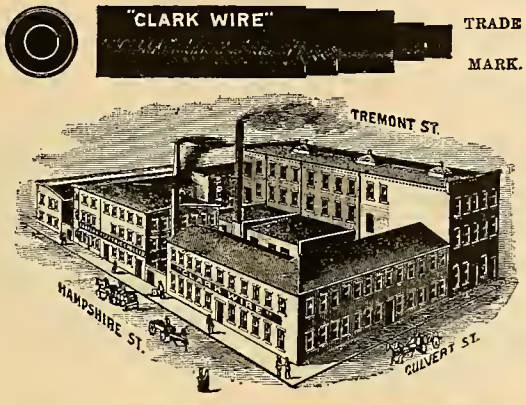
THE
"CLARK" WIRE.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.



TRADE MARK.

In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

Proposals for Street Lighting.

Sealed proposals will be received by the Clerk of the Village of La Grange, Ill., until 8 p. m., Oct. 5, 1896, for lighting the streets of said Village with electric lights for a term of years. There will be required not less than 200 incandescent lights of 20 to 32 c. p. or 20 arc lights of 8 0 to 2,000 c. p.

A franchise for private and commercial lighting will be granted to the successful bidder.

All proposals must be on a form furnished by the bidder and shall be accompanied with a certified check for $100 payable to the Village Clerk.

General plan of lighting, specifications and other information may be obtained of the Village Clerk, La Grange, or W. B. Ewing, Village Engineer, 1548 Marquette Building, Chicago.

The Village reserves the right to reject any or all bids, or to waive any informality when to the interest of the Village.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

Summer Homes.

In the Lake regions of Wisconsin, Northern Michigan, Minnesota, Iowa and Dakota, there are hundreds of charming localities pre-eminently fitted for summer homes. Nearly all are located on or near lakes which have not been fished out. These resorts are easily reached by railway and range in variety from the "full dress for dinner" to the flannel-shirt costume for every meal. Among the list are names familiar to many of our readers as the perfection of Northern summer resorts. Nearly all of the Wisconsin points of interest are within a short distance from Chicago or Milwaukee, and none of them are so far away from the "busy marts of civilization" that they cannot be reached in a few hours of travel, by frequent trains, over the finest road in the northwest—the Chicago, Milwaukee & St. Paul Railway. A description of the principal resorts, with list of summer hotels and boarding houses, and rates for board, will be sent free on application to F. A. MILLER, Assistant General Pass. Agent, Chicago, Ill.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 5,000 of the new.

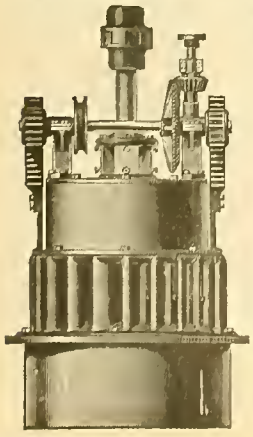
An Excellent Series of Electrical Books.

BY T. O'CONNOR SLOANE.

FOR THE BEGINNER AS WELL AS THE STUDENT.

Profusely Illustrated. Practical. Necessary Adjuncts to every Library. Send in your Orders.

ELECTRICIAN PUBLISHING COMPANY, - - Suite 510 Marquette Building, Chicago.



THE McCORMICK TURBINE,

On Vertical or Horizontal Shaft,
Especially Adapted for Electric Work.

Gives more power per diameter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH, York, Pa.

Estimates furnished for complete power plants and results guaranteed.

MECHANICAL

Engineers interested in electricity should send for our 100-page Catalogue (mailed free to any address). Any electrical book published sent prepaid on receipt of price.

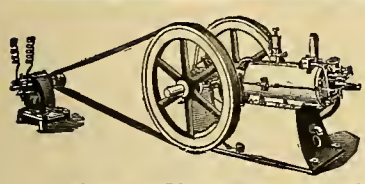
CHICAGO GAS and GASOLINE ENGINE



Used for making **Electric Light** or furnishing power for any purpose required. Specially adapted for electric light in private enterprises. The latest great invention of this progressive age. Built in from 2 to 50 horse power. Stationary or portable. Is the simplest power on the market. A dwarf in size; a Samson in strength. Costs but little to run it. Has no equal for even speed and durability. Send for catalogue.

DOMESTIC Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installatioo, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Electrician Publishing Co.,
Suite 510 Marquette Bldg.,
CHICAGO.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furneces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indispatable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

National Ore & Reduction Co.,

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

THE LATEST BOOK.

"ELECTRIC LIGHTING,"

A PRACTICAL EXPOSITION OF THE ART FOR THE USE OF

Engineers, Students and Others Interested in the Installation or Operation of Electrical Plants.

BY FRANCIS B. CROCKER,

Professor of Electrical Engineering, Columbia University, New York.

Price $3, Prepaid. - Practical and Up-to-Date.

Just the Book you want. 450 Pages, over 150 Illustrations. Read the

TABLE OF CONTENTS:

Chapter I, Introduction; Chapter II, History of Electric Lighting; Chapter III, General Units and Measures; Chapter IV, Classification and Selection of Electric Lighting System; Chapter V, The Location and General Arrangement of Electric Lighting Plants; Chapter VI, Buildings for Electric Lighting Plants; Chapter VII, Possible Sources of Electrical Energy; Chapter VIII, The Steam Engine, History and General Principles; Chapter IX, Steam Boilers for Electric Lighting; Chapter X, Steam Engines for Electric Lighting, General Construction; Chapter XI, Typical Forms of Steam Engine for Electric Lighting; Chapter XII, Steam Engines for Electric Lighting, Selection, Installation and Management; Chapter XIII, Gas, Oil and Hot Air Engines; Chapter XIV, Water Wheels and Windmills; Chapter XV, Mechanical Connections between Engines and Dynamos, Direct Coupling, Belting and Shafting; Chapter XVI, Toothed, Friction and Other Gearing; Chapter XVII, Principles, Construction and Management; Chapter XXI, Applications of Accumulators in Electric Lighting; Chapter XXII, Switchboards, Including Switches, Fuses and Circuit-Breakers; Chapter XXIII, Electrical Measuring Instruments; Chapter XXIV, Lightning Arresters.

Every Engineer and Electrician who desires to thoroughly master the Art of Electric Lighting should have a copy of this book. Sent promptly.

ELECTRICIAN PUBLISHING COMPANY, Suite 510 Marquette Building, CHICAGO.

Have You Read . . .

THE LATEST AND MOST PRACTICAL BOOK ON TELEPHONY? IT IS

THE TELEPHONE HAND-BOOK,

BY HERBERT LAWS WEBB,

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London.
Author of "A Practical Guide to the Testing of Insulated Wires and Cables."
Joint Author of "Electricity in Daily Life."

146 PAGES. 138 ILLUSTRATIONS. CLOTH. HAND-BOOK SIZE. PRICE, POSTAGE FREE, $1.00.

CONTENTS:

The Invention of the Telephone. Sound Waves. Articulate Speech. Electric Telephony. The Bell Telephone. The Microphone. Current Induction. Electromagnetic Induction. The Induction Coil; its use in the Telephone Transmitter. The Complete Telephone Circuit. Magnet Telephones. The Bell Telephone Receiver. Other Forms of Magnetic Telephones. The Gower, Ader and D'Arsonval Receivers. Mercadier's Bi-telephone, The Siemens, Kotyra, Neumayer and Bottcher Receivers. Carbon Transmitters. The Blake Transmitter. The Long-distance Transmitter. The Solid-back Transmitter. The Berliner Transmitter. The Cuttriss Transmitter. Various European Transmitters. The Efficiency of Carbon Transmitters. Batteries for Telephone Work. Open Circuit Batteries. Closed Circuit Batteries. The Practical Management of Batteries. Magneto Bells. Automatic Switches. Telephone Line Construction. Metallic Circuits. Underground Wires. Lightning Arresters. Inside Wiring. Installation of Telephone Instruments. Inspection and Maintenance. The Condenser; its use in Telephony. Electromagnetic Retardation. Exchange Working. Small Exchanges. Party Lines. The Bridging Bell. Long Distance Telephony. Duplex Telephony. Simultaneous Telegraphy and Telephony. Appendix.

HARDTMUTH CORED CARBONS for Direct and Alternating Current ARC LAMPS.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.

AMERICAN CARBON CO.'S Plain and Coated CARBONS FOR SERIES ARC LIGHTING.

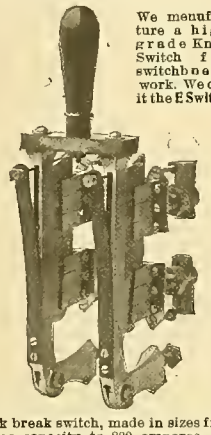
GENERAL WESTERN AGENTS.

Chicago Edison Co.,

DEALERS IN ELECTRIC LIGHTING SUPPLIES,

139 Adams Street, CHICAGO.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.



We menufacture a high grade Knife Switch for switchboard work. We call it the E Switch.

A quick break switch, made in sizes from 50 amperes capacity to 800 amperes. They will be listed in our new catalog. We manufactnre arc and incandescent dynamns and direct current motors. Also arc lamps.

We have in stock in our Chicago Store

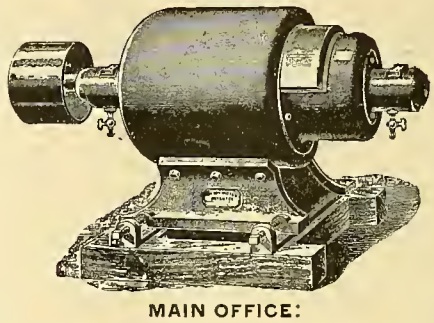
WAITING FOR YOUR ORDERS

Sockets, Switches, Cut-Outs,
Tubes and Insulators,
Shawmut Fuse Wire and Knife Switches,
Bells, Annunciators,
Batteries, Push Buttons,
Fan Motors, Electric Supplies of all Kinds.

Western Electric Company.

Chicago. New York.

THE STOREY MOTOR.



Iron Clad. Completely closed in.

DUST and Moisture proof.

Specially adapted for direct driving machinery.

The application of Motors to machine tools a specialty.

Light weight. Slow and medium speed.

No exterior magnetism.

MAIN OFFICE:

The Storey Motor & Tool Co.,

YORK & SEDGELEY AVENUE

PHILADELPHIA.

CHICAGO OFFICE:

Metropolitan Electric Co.

NEW YORK OFFICE:

112 Liberty Street,

Branch Factory, HAMILTON, CANADA.

ELECTRIC LAMP SIGNS....

NEW ERA IN ELECTRIC ADVERTISING.

Each lamp is a single letter, which greatly simplifies the construction of a sign, and permits an unlimited advertising display. This sign is low-priced, economical of operation, easily read, very conspicuous, and may be changed in a moment from one form of words to another.

We manufacture High Grade Incandescent Lamps. Lamps of any voltage furnished.

Ask your NEAREST SUPPLY HOUSE for Sample or write

DICKINSON ELECTRIC SUPPLY CO.,

High Grade Incandescent Lamps,

American Tract Society Building, NO. 150 NASSAU STREET, NEW YORK.

NOTICE.

TO THOSE INTERESTED IN ELECTRIC LIGHTING.

If you haven't read Buckley's "ELECTRIC LIGHTING PLANTS; THEIR COST AND OPERATION," you should order a copy at once. It is the only work of its kind in print and will prove an inseparable companion. It is just the book thousands of men have been waiting for; it will be what you want. 275 pages. Illustrated. Cloth, $2.00. Paper cover, $1.00. Postage free.

ELECTRICIAN PUBLISHING COMPANY,

Suite 510 Marquette Bldg., Chicago.

SIEMENS & HALSKE ELECTRIC COMPANY OF AMERICA,

——MANUFACTURERS OF——

Direct Current, Multipolar, Slow Speed, External Armature Generators and Motors, especially adapted for Direct Connection.
(Type I)—In sizes from 20 to 2,000 H. P.

Direct Current, Multipolar, Medium Speed, Internal Armature Generators and Motors adapted for Belting.
(Type A.)—In sizes from 10 to 300 H. P.

Direct Current, Bipolar, Medium Speed, Internal Armature Generators and Motors adapted for Belting.
(Type L. H.)—In sizes from 5 to 130 H. P.

Direct Current Boosters, absolutely controlled by U. S. Patents granted to Siemens & Halske Electric Company.

SIEMENS' BAND ARC LAMPS FOR DIRECT AND ALTERNATING CURRENT, ELECTRIC MINING LOCOMOTIVES, STEAM LOCOMOTIVES, ETC., ETC.

COMPLETE ELECTRIC RAILWAY EQUIPMENTS UNDER SIEMENS' PATENTS:

Siemens' Underrunning Trolleys.

The Siemens Contact Bar is safer than the ordinary trolley, and the overhead construction is less costly. Dr. Ernst Werner von Siemens was the pioneer in Electric Traction. He built his first Electric Railway in 1879. Write for Catalogues and further information to

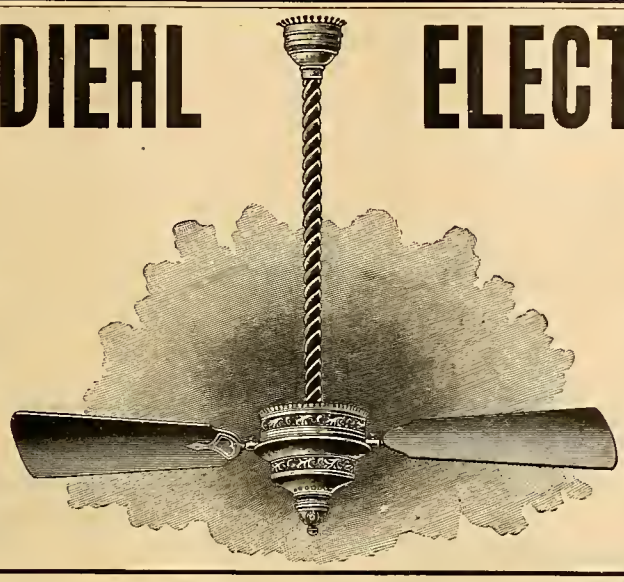
THE NEW DIEHL ELECTRIC FANS.



Highly finished in Japan, Nickel, Polished Brass and Venetian Designs.

Increased Efficiency. Improved Mechanical Construction.

We also have a complete stock of Direct and Alternating Current Desk Fans at very low prices.

If you are in need of Battery Fan Motor Outfits we can fill your orders from stock.

For Catalogue and price lists address

METROPOLITAN ELECTRIC COMPANY,

186-188 Fifth Avenue, Chicago.

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

THE AMERICAN CARBON CO.,

Noblesville, Ind., U. S. A.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 80 Pages. 39 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

PRACTICAL

Guide for Firemen,

BY W. H. WAKEMAN.

Price 75 Cents.

80 pages, 14 illustrations, bound in cloth.

An elementary treatise relating to the care and management of Steam Boilers, Pumps, Injectors, etc., and Steam Plants generally. Containing complete instructions, and many valuable suggestions for the safe, practical, and economical management of the Steam Plant.

Especially intended for those who seek promotion, and aspire to be something more than a "Coal hustler," and for the benefit of Firemen and Engineers who do not "know it all" and who are willing to profit by the suggestions, etc., of "one who has been there."

In writing this book it has been the aim of the author to give the duties of the fireman, or the one in charge of a steam plant, in as simple and concise a manner as the subject and the English language will admit of; and to furnish all the information required to enable them to take charge of and operate a steam plant successfully and economically.

It Helps Mechanics

Lord's Power and Machinery Magazine (*Published Monthly*) tells all about the thousand and one things every mechanic and engineer ought to know. It tells about those things that every good mechanic **must** know. It goes into details. It is practical, full of hints, and helps its readers to become skilled and expert workmen. The more a man knows about his profession, the more salary he will command. The small price it costs to subscribe (**$1 a year**) will come back many times over in increased salary. Sample copy sent for **10 cents.** Write your name and address on a postal card, and mail it to

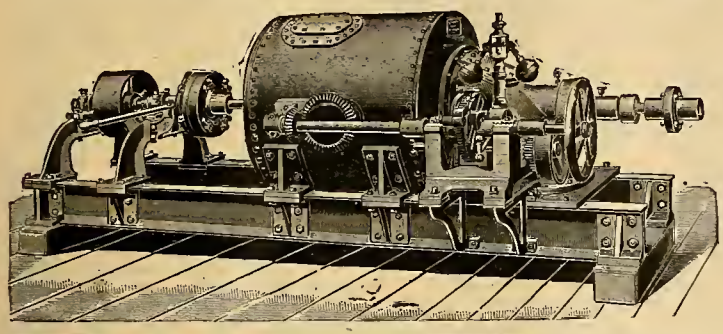
Victor Turbine Water Wheel.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter,** being **double** the **power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

SEND FOR CATALOGUE AND PARTICULARS.

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 38 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts, and where the situation admits of their use we recommend them.

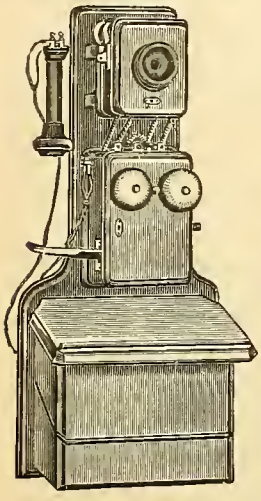
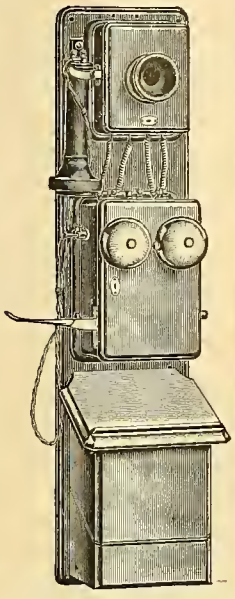
VIADUCT MFG. COMPANY





Is the **oldest** concern of the kind in this country, with one exception, manufacturing

Magneto Bells, Telephones, District Telegraph Messenger Boxes

and other appliances.

It has had 18 years' experience; 5 years as licensed manufacturer of the American Bell Telephone Company. It has made more Magneto Bells than all the other manufacturers in the country. Its standard work is known by all experienced telephone men.

The works are located at the Relay Station, Baltimore & Ohio Railroad, and run by water power.

It manufactures all of its own woodwork, as well as brass, iron, steel and everything connected with its output.

The Electric Motor and Its Applications.

BY T. C. MARTIN AND JOSEPH WETZLER.

THIRD EDITION.

With an Appendix by Dr. Louis Bell, bringing the book down to date.

Cloth, 315 large quarto pages, 353 Illustrations. Price, $3.00.

The wealth of information contained in the three hundred and odd large double-column pages of this important work is equaled in few special technical treatises, even those of a professedly exhaustive character. More than one hundred different motors are described and illustrated—many in great detail—and the different applications are similarly fully treated. Many of the illustrations are full page, and the details of construction, particularly of armatures, are fully illustrated. The treatment is simple, clear and concise, and little mathematics is employed, the work being essentially of a practical and largely of a descriptive character. The section on alternating motors resumes in a simple manner without mathematical formulæ, the principles upon which they are based, and that on thermo-magnetic motors treats this interesting class in greater detail than can be found in any other publication. An interesting feature is the historical method of treatment, by means of which the different steps in the advance of theories and design can be clearly traced, and the varying results of explorations in many directions instructively followed.

CONTENTS.

Chapter I. Elementary Considerations.—Chapter II. Early Motors and Experiments in Europe.—Chapter III. Early Motors and Experiments in America.—Chapter IV. The Electrical Transmission of Power.—Chapter V. The Modern Electric Railway and Tramway in Europe.—Chapter VI. The Modern Electric Railway and Street-car Line in American.—Chapter VII. The Use of Storage Batteries with Electric Motors for Street Railways.—Chapter VIII. The Industrial Application of Electric Motors in Europe.—Chapter IX. The Industrial Application of Electric Motors in America.—Chapter X. Electric Motors in Marine and Aërial Navigation.—Chapter XI. Telpherage.—Chapters XII, XIII. Latest American Motors and Motor Systems.—Chapter XIV. Latest European Motors and Motor Systems.—Chapter XV. Alternating Current Motors.—Chapter XVI. Thermo-magnetic Motors.—Appendix. The Development of the Electric Motor since 1888.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

	Head.	Rev. per Min.	Cu. Ft. per Sec.	H. P.	Per Cent.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

Sent postpaid on receipt of price.

ELECTRICIAN PUBLISHING CO.,
SUITE 510 MARQUETTE BUILDING, CHICAGO.

In your hand we seek to place a copy of our recent booklet descriptive of the

Webster System of Steam Heating.

IT can easily be read in five minutes, but we think you will cheerfully give ten to it, as it clearly demonstrates claims for the aforesaid Webster System that are absolutely unique in the annals of Steam Heating practice. If the highest attainable efficiency, wedded to simplicity, low cost of installation and operation, are desiderata in your estimation, we shall be most happy to mail you this little booklet for your leisurely perusal.

WARREN WEBSTER & CO.,

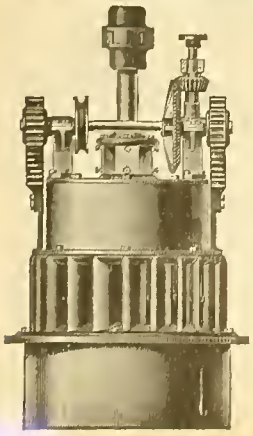
M-5



THE McCORMICK TURBINE,

On Vertical or Horizontal Shaft,
Especially Adapted for Electric Work.

Gives more power per diameter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH, York, Pa.

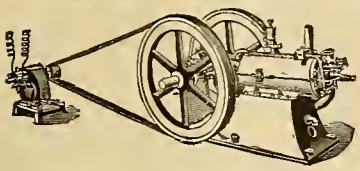
Estimates furnished for complete power plants and results guaranteed.

MECHANICAL

Engineers interested in electricity should send for our 100-page Catalogue (mailed free to any address). Any electrical book published sent prepaid on receipt of price.

ELECTRICIAN PUBLISHING CO., Suite 510 Marquette Bldg., CHICAGO.

CHICAGO GAS and GASOLINE ENGINE



Used for making **Electric Light** or furnishing power for any purpose required. Specially adapted for electric light in private enterprises. The latest great invention of this progressive age. Built in from 2 to 50 horse power. Stationary or portable. Is the simplest power on the market. A dwarf in size; a Samson in strength. Costs but little to run it. Has no equal for even speed and durability. Send for catalogue.

DOMESTIC

Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Electrician Publishing Co.,
Suite 510 Marquette Bldg.,
CHICAGO.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.60

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 6½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 6½x3 inches, flexible cloth binding, 66 pages, 36 cuts and 6 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 6½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.60

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors, How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 600 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter I. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised ..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

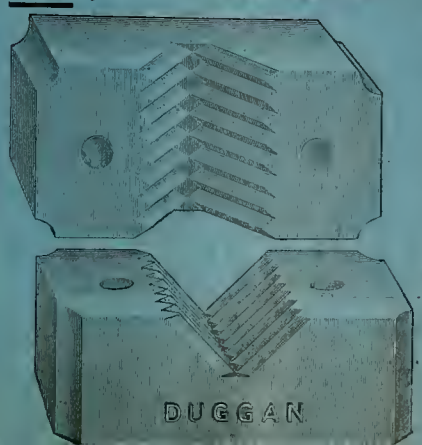
THE DUGGAN CLEAT

LEADS THEM ALL.



When ordering see that you get the DUGGAN.

Made in one wire No. 4, 5 and 6.
Two wire No. 2 and 3.
Three wire No. 1.

They are corrugated and V-shaped groove.

They grip like a vise.

No sagging wire when once stretched.

They are made of the finest glazed porcelain. Ten of them used to one of any other make.

No. 1, 3 and 4 holds wire 16 to 8.
No. 2 and 5 holds wire 6 to 00.
No. 6 holds wire 000 and larger.

Imperial Porcelain Works,

369 Wabash Ave., Chicago, Ill.

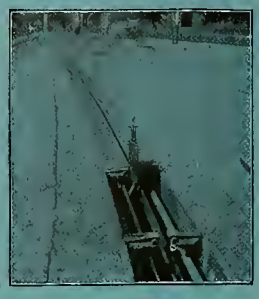
Factory, Trenton, N. J.

Reflections?

Yes! We are constantly making them. See them? We confess that this is our business. Our name indicates it. But they are always of the pleasing kind. This is the secret of our success, and the reason why we are the largest manufacturers of them the whole world over. As the days shorten we are in increased demand, but we aim always to be ready for any call.

WHEELER REFLECTOR CO.,
23 Washington St., Boston, Mass.

THE K. A. K. CONDUIT SYSTEM.



Simple in Construction.

Practical in Operation.

Successfully Stood the Severe Tests of Last Winter's Snowstorms.

SEND FOR FULL PARTICULARS.

500 NEW STAR ARC LAMPS for Alternating Current, AT COST.

Perfectly Steady Light.
No Sticking or Jumping.
No Burning out of Spools.
Perfect Start without Chattering.
The only Lamp giving perfect satisfaction on the meter system.

We want every Alternating Current Station in the country to try our new lamp. We have therefore decided to devote to this purpose **500** of our recently manufactured stock of arc lamps, containing **all our latest improvements,** and hereby offer them to the trade at their **Actual Cost,**

$12.50--Twelve Dollars and 50 Cents.

In justice to our old customers and to ensure the greatest distribution for this sale, not more than two sample lamps will be sold to one customer. Our guarantee goes with the lamps. These lamps are of solid construction, the best workmanship, and no expense has been spared to make them the best alternating arc lamps in the market.

Remember that this price will prevail only until the 500 arc lamps are disposed of.

AUERBACH-WOOLVERTON ELECTRIC COMPANY,

AGENTS WANTED IN ALL THE PRINCIPAL CITIES.

113-115 Adams St., HOBOKEN, N. J.

The Fire Insurance Underwriters

Have indorsed the "Pioneer" enclosed arc lamp because it is a **"Perfect Spark Arrester."** Besides, by burning 100 to 150 hours without change of carbons, each "Pioneer" lamp saves $15 to $20 per annum. It is shadowless, steady, noiseless, simple and safe.

Up-to-date merchants are discarding the old short hour open arc lamps and substituting our "Pioneer."

THE ELECTRIC ARC LIGHT CO.

LOUIS B. MARKS, M. M. E.,
Chief Electrician.

HARDTMUTH CORED CARBONS for Direct and Alternating Current ARC LAMPS.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.

AMERICAN CARBON CO.'S Plain and Coated CARBONS FOR SERIES ARC LIGHTING.

GENERAL WESTERN AGENTS.

Chicago Edison Co.,

DEALERS IN ELECTRIC LIGHTING SUPPLIES,

139 Adams Street, CHICAGO.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.

We manufacture a high grade Knife Switch for switchboard work. We call it the E Switch.

A quick break switch, made in sizes from 50 amperes capacity to 800 amperes. They will be listed in our new catalog. We manufacture arc and incandescent dynamos and direct current motors. Also arc lamps.

We have in stock in our Chicago Store

WAITING FOR YOUR ORDERS

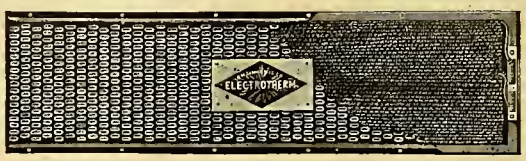
Sockets, Switches, Cut-Outs,
Tubes and Insulators,
Shawmut Fuse Wire and Knife Switches,
Bells, Annunciators,
Batteries, Push Buttons,
Fan Motors, Electric Supplies of all Kinds.

Western Electric Company.

Chicago. New York.

The "H. W. J." Electric Car Heater.

(PATENTED.)



Simplicity—Effectiveness—Durability—Economy.

No coils to short-circuit or break, no oxidation, perfect air circulation, easily controlled and regulated by patented knife switch. Adjustable to three different degrees of heat. Prices, etc., on application.

H. W. JOHNS MANUFACTURING CO., 240-242 Randolph Street, CHICAGO, ILL.

New York. Philadelphia. Boston.

ELECTRIC LAMP SIGNS....

NEW ERA IN ELECTRIC ADVERTISING.

Each lamp is a single letter, which greatly simplifies the construction of a sign, and permits an unlimited advertising display. This sign is low-priced, economical of operation, easily read, very conspicuous, and may be changed in a moment from one form of words to another.

We manufacture High Grade Incandescent Lamps. Lamps of any voltage furnished.

Ask your NEAREST SUPPLY HOUSE for Sample or write

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

X-RAYS
FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 80 Pages. 39 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 5,000 of the new.

Electrician Publishing Co.,

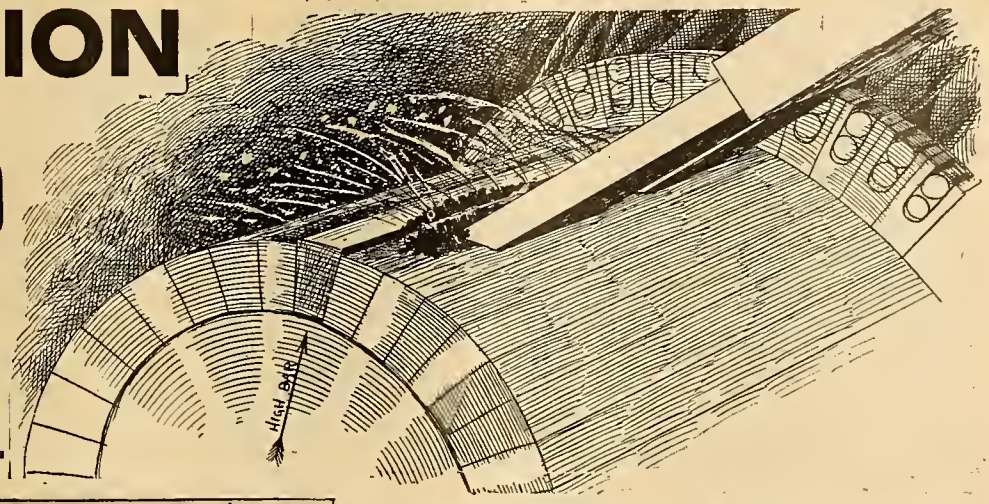
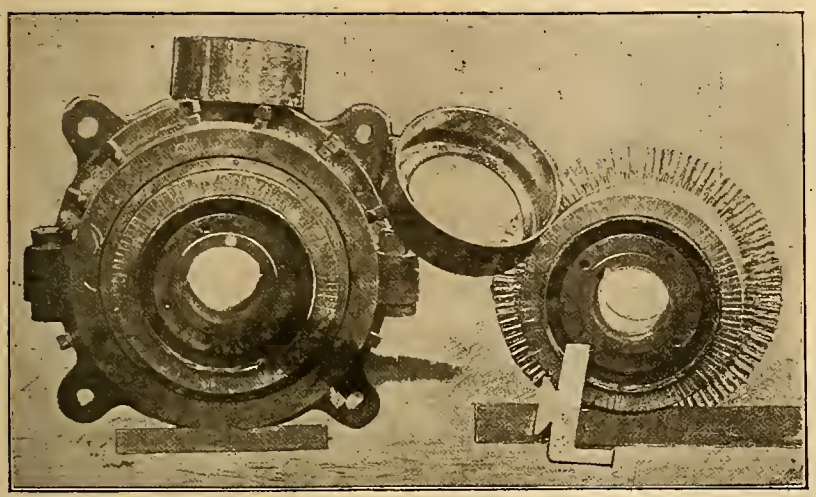
PERFECTION

—IN—

ARMATURES AND COMMUTATORS

IS VITAL TO YOUR INTERESTS.





Look at that high bar. A few bars ahead there is a blow-hole as big as a chestnut. Lots of little holes, too. Any self-respecting brush would spark if it had to hobble over such a surface. Polish is only skin deep.

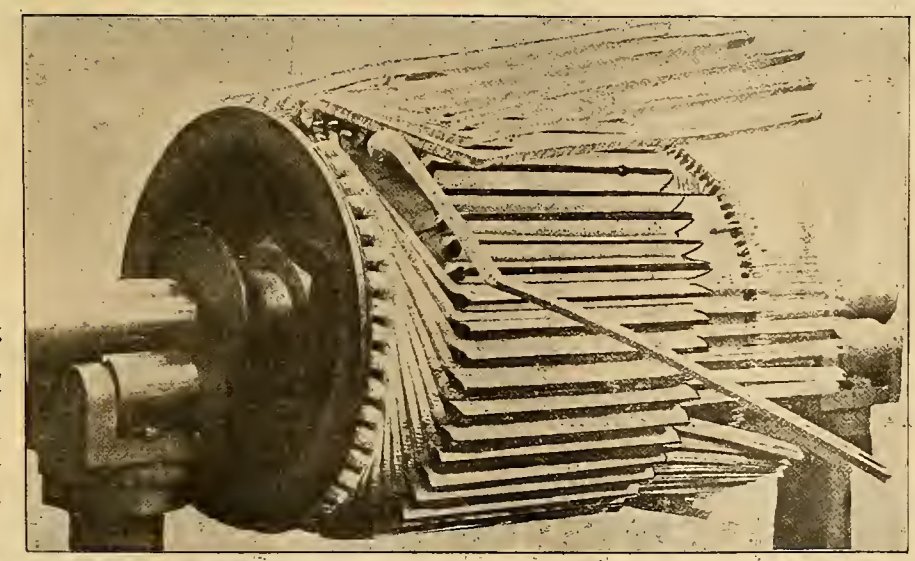
This was not a Walker Commutator.

The Walker Commutator has drop forged bars. Blow-holes and sand-holes are omitted. It is set up with a pressure of **several tons to the square inch.** Look at this powerful clamp.

When finished the Commutator is like a solid block. The bars cannot work loose. This is another reason why you should buy the Walker Dynamo for isolated lighting.

How symmetrically they pack in place. Perfect balance, electrically, mechanically. The outcome of **engineering** and not ancient but conventional botchwork.

An armature is a simple piece of apparatus. It is simply a cylinder of iron with conductors on its surface parallel to its axis, thus ☚



But these conductors must be connected. For instance, No. 1 connects with No. 16, No. 2 with No. 19, and so on. Some people connect them regardless of system. A shapeless wad like this results—**a place for Bugs and Burnouts**—and you must rip your armature to pieces if any should occur. If there were more conductors, and there always are, it would be worse. If you don't watch out, some one will sell you such a monstrosity covered with a **canvas head.**

You are safer in buying the Walker Dynamo.

See how easily the finished coils may be removed.

A Perfect Conduit.

ARMORITE INTERIOR CONDUIT
IRON ARMORED.

Armorite Iron Armored Interior Conduit is superior to its predecessors in the fact that it has a perfectly smooth bore which allows the wire to be drawn into the tube with the greatest possible ease, and without the use of soapstone or other accessories. It can be bent cold into any desired shape, thus saving the labor and cost of using elbows and making a smoother duct.

IT IS WATERPROOF AND FIRE-PROOF AND ELECTRICALLY AND MECHANICALLY PERFECT.

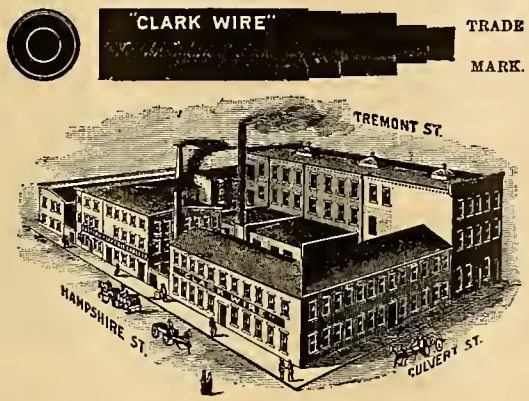
THE
"CLARK" WIRE.

For Switchboard, Railway and Motor use, we make all sizes of Stranded and Flexible Wire and Cables with Clark's Insulation.

The Clark Wire has been before the public and in use for the past nine years, and has met with universal favor. Thousands of miles of this wire have been sold, and are in use throughout the United States and Foreign Countries, and the demand for it is constantly increasing, because it always gives perfect satisfaction.



In a Letter from the Inspector of the Boston Fire Underwriters' Union, he states: "A Thoroughly Reliable and Desirable Wire in every respect."

The Rubber used in insulating our Wires and Cables is especially chemically prepared, and will not deteriorate, oxidize or crack, and will remain flexible in extreme cold weather, and is not affected by heat.

We guarantee our Insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class Insulated Wire.

We shall be pleased to mail Catalogues with Terms and Discounts for Quantities.

Just Published.

PRACTICAL
Guide for Firemen,
BY W. H. WAKEMAN.
Price 75 Cents.
80 pages, 14 illustrations, bound in cloth.

An elementary treatise relating to the care and management of Steam Boilers, Pumps, Injectors, etc., and Steam Plants generally. Containing complete instructions, and many valuable suggestions for the safe, practical, and economical management of the Steam Plant.

Especially intended for those who seek promotion, and aspire to be something more than a "Coal hustler," and for the benefit of Firemen and Engineers who do not "know it all" and who are willing to profit by the suggestions, etc., of "one who has been there."

In writing this book it has been the aim of the author to give the duties of the fireman, or the one in charge of a steam plant, in as simple and concise a manner as the subject and the English language will admit of; and to furnish all the information required to enable them to take charge of and operate a steam plant successfully and economically.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

DOMESTIC

Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Electrician Publishing Co.,

Suite 510 Marquette Bldg.,

CHICAGO.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

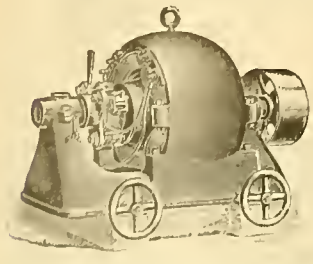
AMERICAN-BALL ENGINE.



The result of twenty-five years' experience with four thousand engines, designed and built by Mr. Frank H. Ball.

The latest development in practical steam engineering. New features, improved design and finish, but the same old valve that has saved thousands of tons of coal in the last quarter of a century, and is the only form of valve used in single valve automatics, that follows its own wear, and never leaks.

We also build a full line of multipolar dynamos and motors, and our new six-pole generators are adapted to our **American-Ball Engine**, making complete and symmetrical generating units.

AMERICAN ENGINE CO., Bound Brook, N. J.

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

This is neither McKinley nor Bryan, but a somewhat rare specimen nowadays—a happy man.

And we are happy, even in these hard times. The electric trade is finding out where to buy Reflectors for every conceivable purpose; Tin Shades; Cluster Lights; Reflector Chandeliers, Street-Lighting Fixtures, Headlights, etc., etc.

Cnstomers, old and new, are sending their orders; but we can take care of more, aud so increase the number of happy men.

Please let us tell you how.

ONE DOLLAR EACH.

500 ALTERNATING CURRENT LAMPS AT COST.

Perfectly Steady Light.
No Sticking or Jumping.
No Burning out of Spools.
Perfect Start without Chattering.
The only Lamp giving perfect satisfaction on the meter system.]

We want every Alternating Current Station in the country to try our new lamp. We have therefore decided to devote to this purpose **500** of our recently manufactured stock of arc lamps, containing **all our latest improvements**, and hereby offer them to the trade at their **Actual Cost,**

$12.50--Twelve Dollars and 50 Cents.

In justice to our old customers and to ensure the greatest distribution for this sale, not more than two sample lamps will be sold to one purchaser. These lamps are warranted first-class in every respect. They are of solid construction, the best workmanship, and no expense has been spared to make them the best alternating arc lamps in the market.

Remember that this price will prevail only until the 500 arc lamps are disposed of.

An Electric Stew Pan.

THIS is a universal utensil, very attractive in appearance, and one of the most salable of electric heating devices. The heater consists of a 4½-inch disc to which is fitted a (removable) *aluminum* stew pan, with capacity of ¾ of a quart. Just the thing to use in light housekeeping, exactly what is wanted in a physician's office, drug store, hospital, the nursery, or where a little food is to be cooked, a hot drink made, or hot water used. Quick, clean, and inexpensive. Connects to any lamp socket. Packed complete with cord and plug. Made for any lighting circuit.

No.		Amperes at 110 Volts.	Price.
1720.	**Heater and Aluminum Stew Pan**	**2**	**$5.00**

ROBINSON CO., X-RAY Apparatus.
315 Dearborn St., Chicago, Mfrs.,

The Carbutt X-Ray Plates,
FROM 4x5 TO 11x14 INCLUSIVE, ARE
Individually Wrapped
In light proof wrappers, so that they may be used under the X-Rays without any further preparation; 14x17 and larger sizes can conveniently be used by placing the X-Ray plate in a shallow photograph printing frame, placing over the sensitive side a sheet of opaque paper that will be found in each box. The composition of the Emulsion is such that the X-Rays are largely *absorbed*, and allows of shorter exposure with the production of more detail in the *Radiograph* Negative than can be obtained on ordinary Dry Plates.
FOR PRICES, ETC., ADDRESS
JOHN CARBUTT, WAYNE JUNCTION, PHILADELPHIA.

X-RAYS
FOR EVERYBODY.
By Edward Trevert.
Just off the Press. 80 Pages. 39 Illustrations.
Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.
Write us at once, enclosing 25 Cents in stamps, postal note, express money order, and get one of these valuable books.

NOTICE.
TO THOSE INTERESTED IN ELECTRIC LIGHTING.
If you haven't read Buckley's "ELECTRIC LIGHTING PLANTS; THEIR COST AND OPERATION," you should order a copy at once. It is the only work of its kind in print and will prove an inseparable companion. It is just the book thousands of men have been waiting for; it will be what you want. 275 pages. Illustrated. Cloth, $2.00. Paper cover, $1.00. Postage free.
ELECTRICIAN PUBLISHING COMPANY,
Suite 510 Marquette Bldg., Chicago.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.
MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.
BY W. H. WAKEMAN.
12 mo. Cloth. 272 pages. 53 Chapters.
Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.
PRICE, $2.00
By mail, postpaid, to any part of the world
This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.
The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.
As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."
The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.
The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.
His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.
The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines; The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

THE McCORMICK TURBINE,

On Vertical or Horizontal Shaft, Especially Adapted for Electric Work.

Gives more power per diameter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH, York, Pa.

Estimates furnished for complete power plants and results guaranteed.

SUPPOSE there was a Steam Heating System that, while supplying any number of Radiators from the same main, permitted of each one of those Radiators being independently regulated to suit the caloric notions of the man in whose room it was located? Suppose, furthermore, that this was but one desirable feature of that system, which was also unapproachably effective in its operation and of notably small first cost?

Now the **Webster System of Steam Heating**

actually is precisely such an one, and the details of it are plainly set forth in a neat little booklet, which we shall be pleased to mail you. Will you afford us that pleasure?

DOMESTIC

Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed. The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

THE DUGGAN CLEAT

LEADS THEM ALL.

When ordering see that you get the DUGGAN.

Made in one wire No. 4, 5 and 5.
Two wire No. 2 and 3.
Three wire No. 1.

They are corrugated and V-shaped groove.

They grip like a vise.

No sagging wire when once stretched.

They are made of the finest glazed porcelain. Ten of them used to one of any other make.

No. 1, 3 and 4 holds wire 16 to 8,
No. 2 and 5 holds wire 6 to 00,
No. 6 holds wire 000 and larger.

Imperial Porcelain Works,

369 Wabash Ave., Chicago, Ill.

This is neither McKinley nor Bryan, but a somewhat rare specimen nowadays—a happy man.

And we are happy, even in these hard times. The electric trade is finding out where to buy Reflectors for every conceivable purpose; Tin Shades; Cluster Lights; Reflector Chandeliers, Street-Lighting Fixtures, Headlights, etc., etc.

Customers, old and new, are sending their orders; but we can take care of more, and so increase the number of happy men.

Please let us tell you how.

PERFECT MICANITE INSULATOR REGISTERED

Rings, Segments, Cloth, Paper and our other specialties are used by the leading builders of electrical machinery, and electric railways throughout American and European countries.

MICA INSULATOR CO., Sole Manufacturers. NEW YORK, 218 Water Street. CHICAGO, 153 Lake Street. LONDON, 12 Camomile Street.

500 ALTERNATING CURRENT LAMPS AT COST.

Perfectly Steady Light.
No Sticking or Jumping.
No Burning out of Spools.
Perfect Start without Chattering.
The only Lamp giving perfect satisfaction on the meter system.

We want every Alternating Current Station in the country to try our new lamp. We have therefore decided to devote to this purpose **500** of our recently manufactured stock of arc lamps, containing **all our latest improvements,** and hereby offer them to the trade at their **Actual Cost,**

$12.50--Twelve Dollars and 50 Cents.

In justice to our old customers and to ensure the greatest distribution for this sale, not more than two sample lamps will be sold to one purchaser. These lamps are warranted first-class in every respect. They are of solid construction, the best workmanship, and no expense has been spared to make them the best alternating arc lamps in the market.

Remember that this price will prevail only until the 500 arc lamps are disposed of.

AUERBACH-WOOLVERTON ELECTRIC COMPANY,

AGENTS WANTED IN ALL THE PRINCIPAL CITIES.

X-RAYS
FOR EVERYBODY.
By Edward Trevert.
Just off the Press. 80 Pages. 39 Illustrations.
Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

"THE ELECTRA"

HIGH GRADE NUERNBERG

CARBONS

For Direct Current Arc Lamps,

FOR ALTERNATING CURRENT ARC LAMPS,

Are by far the most economical and efficient manufactured.

They are unsurpassed for even and perfect combustion.
They produce practically no dust, and are therefore more completely consumed, thus giving a longer life than any other carbon.
They give an excellent, uniform, brilliant and steady light.
They produce the highest standard candle power in proportion to the current consumed, and are therefore the most economical carbons manufactured.

The leading electric light stations who have tested the "ELECTRA" CARBONS, and have since adopted them exclusively for their arc lighting, admit their superiority over any other high grade carbons.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY, - - - Suite 510 Marquette Building, Chicago, Ill.

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neomayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines; The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

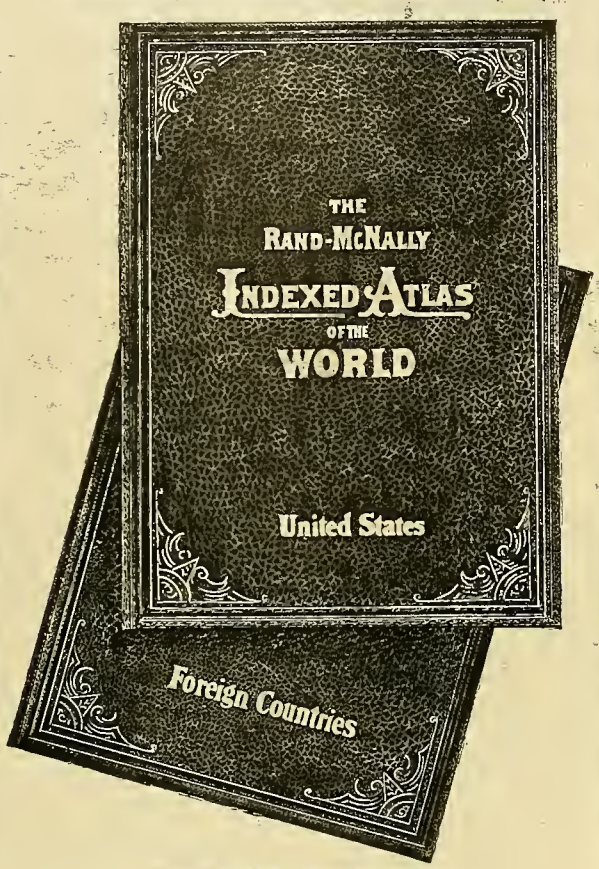
The Rand-McNally Atlases.

INDEXED ATLAS OF THE WORLD.

The most thorough and exhaustive work of its kind published either in the United States or abroad. It is not merely a "collection of maps," but **an encyclopedia, a railway directory and a gazetteer.**

Sixty-three large, colored, comparative, statistical diagrams

Show, at a glance, all matters pertaining to the statistics of all countries concerning area and population, agriculture, mineral products, education, transportation, commerce and finance.



199 PAGES OF MAPS,

Accurately compiled and so systematically indexed that each and every city, town, village, island, mountain, lake or stream can be as readily found as can a word in a dictionary. The Ready Reference Index covers over 200,000 places.

460 PAGES. SIZE 15x21.

Can be obtained in two elegantly bound volumes, viz.:

FOREIGN COUNTRIES (Vol. 1)—
Including all countries foreign to the United States. 224 pages.

UNITED STATES (Vol. 2)—
Pertaining exclusively to the United States. 236 pages.

At the following extremely low prices:

Two volumes, extra fancy-lined cloth, beveled covers, embossed side stamp and gold title, marble edges, $18.50.

Two volumes, half leather, seal grain, beveled covers, embossed side stamp and gold title, gold edges, $23.50.

Two volumes, full leather, seal grain, embossed beveled covers, elaborate gold side stamp and title, gold edges, $28.50.

OTHER ATLASES.

BUSINESS ATLAS OF THE U. S.

(Issued and corrected yearly). Contains large scale maps of every state and territory, with complete index, showing **every** place that has a name, its population, express company, railroad, money order office, telegraph station, etc. Cloth, $7.50.

UNIVERSAL ATLAS.

444 pages, including 157 pages of colored maps. Everything new and up to date. The maps cover every country of the world and every state and territory, as well as the leading cities of the U. S. Cloth, $5.00; half leather, $6.00; full leather, $8.50.

THE TWENTIETH CENTURY ATLAS.

160 pages, devoted entirely to maps with a marginal index, giving list of important towns arranged in the order of their importance. Cloth, $3.00; leather, $5.00.

THE POPULAR ATLAS.

Same as the Twentieth Century but in cheaper binding. Cloth, $2.50.

The Electric Motor and Its Applications.

BY T. C. MARTIN AND JOSEPH WETZLER.

THIRD EDITION.

With an Appendix by Dr. Louis Bell, bringing the book down to date.

Cloth, 315 large quarto pages, 353 Illustrations. Price, $3.00.

The wealth of information contained in the three hundred and odd large double-column pages of this important work is equaled in few special technical treatises, even those of a professedly exhaustive character. More than one hundred different motors are described and illustrated—many in great detail—and the different applications are similarly fully treated. Many of the illustrations are full page, and the details of construction, particularly of armatures, are fully illustrated. The treatment is simple, clear and concise, and little mathematics is employed, the work being essentially of a practical and largely of a descriptive character. The section on alternating motors resumes in a simple manner without mathematical formulæ, the principles upon which they are based, and that on thermo-magnetic motors treats this interesting class in greater detail than can be found in any other publication. An interesting feature is the historical method of treatment, by means of which the different steps in the advance of theories and design can be clearly traced, and the varying results of explorations in many directions instructively followed.

CONTENTS.

Chapter I. Elementary Considerations.—Chapter II. Early Motors and Experiments in Europe.—Chapter III. Early Motors and Experiments in America.—Chapter IV. The Electrical Transmission of Power.—Chapter V. The Modern Electric Railway and Tramway in Europe.—Chapter VI. The Modern Electric Railway and Street-car Line in American.—Chapter VII. The Use of Storage Batteries with Electric Motors for Street Railways.—Chapter VIII. The Industrial Application of Electric Motors in Europe.—Chapter IX. The Industrial Application of Electric Motors in America.—Chapter X. Electric Motors in Marine and Aërial Navigation.—Chapter XI. Telpherage.—Chapters XII, XIII. Latest American Motors and Motor Systems.—Chapter XIV. Latest European Motors and Motor Systems.—Chapter XV. Alternating Current Motors.—Chapter XVI. Thermo-magnetic Motors.—Appendix. The Development of the Electric Motor since 1888.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

	Head.	Rev. per Min.	Cu. Ft. per Sec.	H. P.	Per Cent.

DOMESTIC

Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Electrician Publishing Co.,

CHICAGO.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

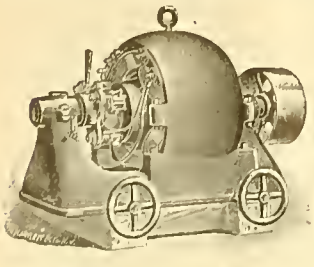
AMERICAN-BALL ENGINE.



The result of twenty-five years' experience with four thousand engines, designed and built by Mr. Frank H. Ball.

The latest development in practical steam engineering. New features, improved design and finish, but the same old valve that has saved thousands of tons of coal in the last quarter of a century, and is the only form of valve used in single valve automatics, that follows its own wear, and never leaks.

We also build a full line of multipolar dynamos and motors, and our new six-pole generators are adapted to our **American-Ball Engine,** making complete and symmetrical generating units

WESTERN ELECTRICIAN

Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been **FOUND** that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the **NORTH POLE.**

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY.

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly

FROM 4x5 TO 11x14 INCLUSIVE, ARE

Individually Wrapped

In light proof wrappers, so that they may be used under the X-Rays without any further preparation; 14x17 and larger sizes can conveniently be used by placing the X-Ray plate in a shallow photograph printing frame, placing over the sensitive side a sheet of opaque paper that will be found in each box. The composition of the Emulsion is such that the X-Rays are largely *absorbed*, and allows of shorter exposure with the production of more detail in the *Radiograph* Negative than can be obtained on ordinary Dry Plates.

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

THE AMERICAN CARBON CO.,

Noblesville, Ind., U. S. A.

"THE ELECTRA"

HIGH GRADE NUERNBERG

CARBONS

For Direct Current Arc Lamps,

FOR ALTERNATING CURRENT ARC LAMPS,

Are by far the most economical and efficient manufactured.

They are unsurpassed for even and perfect combustion.
They produce practically no dust, and are therefore more completely consumed, thus giving a longer life than any other carbon.
They give an excellent, uniform, brilliant and steady light.
They produce the highest standard candle power in proportion to the current consumed, and are therefore the most economical carbons manufactured.

The leading electric light stations who have tested the "ELECTRA" CARBONS, and have since adopted them exclusively for their arc lighting, admit their superiority over any other high grade carbons.

500 ALTERNATING CURRENT LAMPS AT COST.

We want every Alternating Current Station in the country to try our new lamp. We have therefore decided to devote to this purpose **500** of our recently manufactured stock of arc lamps, containing **all our latest improvements,** and hereby offer them to the trade at their **actual cost**—

$12.50—Twelve Dollars and Fifty Cents.

In justice to our old customers and to ensure the greatest distribution for this sale, not more than two sample lamps will be sold to one purchaser. These lamps are warranted first class in every respect. They are of solid construction, the best workmanship, and no expense has been spared to make them the best alternating arc lamps in the market.

Remember that this price will prevail only until the 500 arc lamps are disposed of.

Perfectly steady light; no sticking or jumping, no burning out of spools; perfect start without chattering; the only lamp giving perfect satisfaction on the meter system.

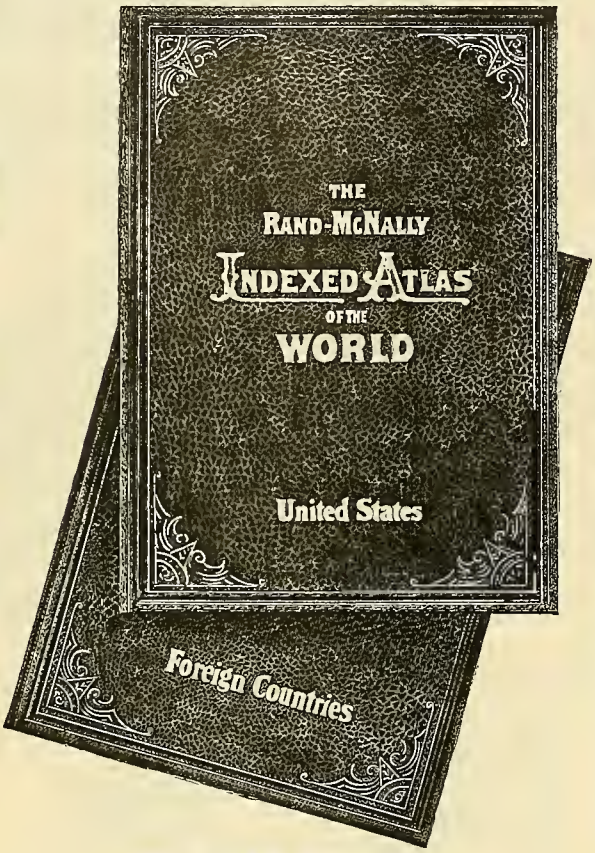
The Rand-McNally Atlases.

INDEXED ATLAS OF THE WORLD.

The most thorough and exhaustive work of its kind published either in the United States or abroad. It is not merely a "collection of maps," but **an encyclopedia, a railway directory and a gazetteer.**

Sixty-three large, colored, comparative, statistical diagrams Show, at a glance, all matters pertaining to the statistics of all countries concerning area and population, agriculture, mineral products, education, transportation, commerce and finance.



199 PAGES OF MAPS, Accurately compiled and so systematically indexed that each and every city, town, village, island, mountain, lake or stream can be as readily found as can a word in a dictionary. The Ready Reference Index covers over 200,000 places.

460 PAGES. SIZE 15x21.

Can be obtained in two elegantly bound volumes, viz.:

FOREIGN COUNTRIES (Vol. 1)—
Including all countries foreign to the United States. 224 pages.

UNITED STATES (Vol. 2)—
Pertaining exclusively to the United States. 236 pages.

At the following extremely low prices:

Two volumes, extra fancy-lined cloth, beveled covers, embossed side stamp and gold title, marble edges, $18.50.

Two volumes, half leather, seal grain, beveled covers, embossed side stamp and gold title, gold edges, $23.50.

Two volumes, full leather, seal grain, embossed beveled covers, elaborate gold side stamp and title, gold edges, $28.50.

OTHER ATLASES.

BUSINESS ATLAS OF THE U. S.

(Issued and corrected yearly). Contains large scale maps of every state and territory, with complete index, showing **every** place that has a name, its population, express company, railroad, money order office, telegraph station, etc. Cloth, $7.50.

UNIVERSAL ATLAS.

444 pages, including 157 pages of colored maps. Everything new and up to date. The maps cover every country of the world and every state and territory, as well as the leading cities of the U. S. Cloth, $5.00; half leather, $6.00; full leather, $8.50.

THE TWENTIETH CENTURY ATLAS.

160 pages, devoted entirely to maps with a marginal index, giving list of important towns arranged in the order of their importance. Cloth, $3.00; leather, $5.00.

THE POPULAR ATLAS.

Same as the Twentieth Century but in cheaper binding. Cloth, $2.50.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

Estimates furnished for complete power plants and results guaranteed.

This Certainly is Specific?

If you will give us certain details concerning your present steam plant viz: Such details as we will suggest if you write us, we will do this—We will tell you precisely what percentage of *saving you can effect by installing the

Webster System of Steam Heating

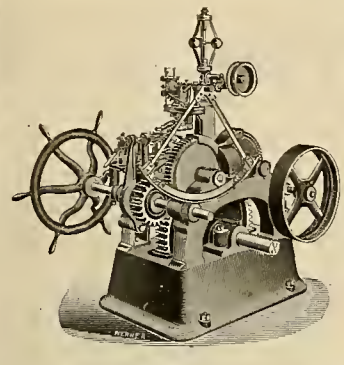
Its unique possibilities as a dividend earning investment are set forth in a highly condensed little booklet which may be had for the asking.

Warren Webster & Co.,

Camden, N. J. New York, 39 Cortland Street. Chicago, 1504 Monadnock Bldg.

*Guaranteed saving we mean.

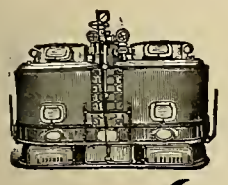
WITH our new "Relay" Governors we are prepared to furnish and guarantee government of water power, under proper conditions, within limits usually attained by the best Corliss engine practice. We have Governors of various sizes, suited for all classes of work, but give especial attention to paper and textile mills, and electric light, power, and railway plants.



CORRESPONDENCE SOLICITED.

The Replogle Governor Works,

AKRON, OHIO.



The Double "Florida" Steam Heating Boiler,

being Sectional, can easily be taken through any ordinary door or window—that is not an unimportant advantage.—*Catalogue.*

DOMESTIC

Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

Electrician Publishing Co.,

Suite 510 Marquette Bldg.,

CHICAGO.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

TRADE MARK:
"Chloride Accumulator"
REGISTERED SEPTEMBER 11, 1894.

AN ILLUSTRATION OF THE VALUE OF CHLORIDE ACCUMULATORS OPERATED IN CONNECTION WITH TROLLEY SYSTEMS.

THE UNION TRACTION COMPANY OF PHILADELPHIA has Installed on its Chestnut Hill division, eleven miles from the power house, a battery of CHLORIDE ACCUMULATORS having a capacity of 500 amperes at 500 volts. The result of this installation is strikingly shown by the contrast between the two portions of the curve on the chart. From 5 a. m. to 1 a. m. the battery absorbed the fluctuations of the load and maintained the full pressure on the line; between those hours when the battery was out of circuit the curve shows the drop in potential and the unsteadiness of the load.

THE ELECTRIC STORAGE BATTERY CO.,

DREXEL BUILDING, - - - PHILADELPHIA, PA.

BRANCH OFFICES:

66 Broadway, New York; 1543 Marquette Building, Chicago, Ill.; 215 North Calvert Street, Baltimore, Md.; 222 Market Street, San Francisco, Cal.; 92 State Street, Boston, Mass.

Pamphlets giving a detailed description of the Union Traction Co. plant, together with other information in regard to the application of Chloride Accumulators to trolley systems, will be forwarded upon application. . . . . .

Chloride Accumulators operated in connection with trolley systems will put a steady load on the generators, save coal, diminish depreciation charges, maintain the potential at the power house or at distant points on the line, increase the capacity of the station, save copper, especially when the battery is located in a sub-station; provide a convenient reserve for a shut-down of short duration. The battery may be used to run all-night cars, to test cars in the repair shop at night and to light buildings after the engines are stopped.

THE O. C. WHITE COMPANY,

WORCESTER, MASS.,

ADJUSTABLE HOLDERS FOR INCANDESCENT LAMPS.

Enables the incandescent lamp, either with or without shade, to be placed instantly in any desired position and held there securely, no attention whatever being given to the fastenings.

Patented Germany, England, France, Canada.

WESTERN ELECTRICIAN

Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been **FOUND** that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the **NORTH POLE.**

We have in stock in our Chicago Store

WAITING FOR YOUR ORDERS

Sockets, Switches, Cut-Outs,
Tubes and Insulators,
Shawmut Fuse Wire and Knife Switches,
Bells, Annunciators,
Batteries, Push Buttons,
Fan Motors, Electric Supplies of all Kinds.

A quick break switch, made in sizes from 50 amperes capacity to 800 amperes. They will be listed in our new catalog. We manufacture arc and incandescent dynamos and direct current motors. Also arc lamps.

Western Electric Company.

Chicago. New York.

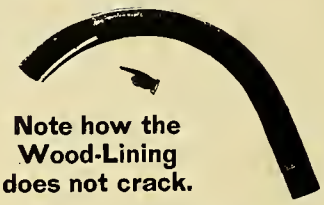
"ARMORITE"!

INTERIOR CONDUIT

(CUMMING'S PATENTS.)

Here's the way it looks inside after bending:

This piece of Armorite Interior Conduit was sawed, as indicated, just after bending in two places, and to show clearly that the bending DID NOT HURT THE WOODEN LINING, the piece cut out was set on end as shown, photographed, and from said photograph the accompanying cut was made.



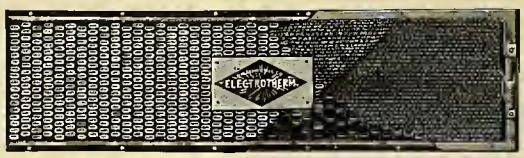
Note how the Wood-Lining does not crack.

ARMORITE INTERIOR CONDUIT CO.,

OFFICE AND WORKS. 478-480 FORT STREET, WEST. DETROIT, MICH.

The "H. W. J." Electric Car Heater.

(PATENTED.)



Simplicity—Effectiveness—Durability—Economy.

No coils to short-circuit or break, no oxidation, perfect air circulation, easily controlled and regulated by patented knife switch. Adjustable to three different degrees of heat. Prices, etc., on application. . . . . .

THE AMERICAN CARBON CO.,

Noblesville, Ind., U. S. A.

WESTERN ELECTRICIAN Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been **FOUND** that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the **NORTH POLE.**

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.
BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

"HARVEST HOME."

The month of November is the farmer's month of thankfulness for a completed harvest and the electrical supply man's month of thankfulness for a harvest just begun. This year particularly we hope to be rewarded during the months of November and December for almost a year of preparation and patient waiting.

PREPARATION

We say of preparation because we have been getting ready during the past summer to take the best possible care of our customers when the right time comes.

OUR STOCKS

of Packard Lamps and Transformers, Paranite Rubber Covered and "O. K." weatherproof wire, etc., etc., were never so large and complete as at the present time. **In short we can give you the best possible attention.**

500 ALTERNATING CURRENT LAMPS AT COST.

We want every Alternating Current Station in the country to try our new lamp. We have therefore decided to devote to this purpose **500** of our recently manufactured stock of arc lamps, containing **all our latest improvements,** and hereby offer them to the trade at their **actual cost**—

$12.50—Twelve Dollars and Fifty Cents.

In justice to our old customers and to ensure the greatest distribution for this sale, not more than two sample lamps will be sold to one purchaser. These lamps are warranted first class in every respect. They are of solid construction, the best workmanship, and no expense has been spared to make them the best alternating arc lamps in the market.

Remember that this price will prevail only until the 500 arc lamps are disposed of.

Perfectly steady light; no sticking or jumping, no burning out of spools; perfect start without chattering; the only lamp giving perfect satisfaction on the meter system.

BIG WAGES

and big salaries depend on a man's abilities. They depend on what he knows. The men who work the longest hours and get the smallest pay are those who put their brains to the least use.

There are three pursuits in which the wages and salaries are liberal to bright people. These people are killed mechanics, engineers and machinists. The more they know, the more pay they get.

Lord's Power and Machinery Magazine will teach ambitious workmen the most valuable lessons. It will be worth more to them in one month than it costs for five years. It covers most thoroughly the entire field of mechanics, engineering and machinery. Published monthly for $1 a year. Send 10 cents for a sample copy.

THE TELEPHONE HAND-BOOK
BY HERBERT LAWS WEBB.
Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."
146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.
EXTRACT FROM PREFACE.
"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."
No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.
CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
CHAPTER 13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
CHAPTER 28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

DOMESTIC
Electrical Work.
Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.
Illustrated with Twenty-two Diagrams.
By WILLIAM A. WITTBECKER.
Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.
THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed. The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickmen, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

PRACTICAL Guide for Firemen,

By W. H. WAKEMAN.

Price 75 Cents.

80 pages, 14 illustrations, bound in cloth.

An elementary treatise relating to the care and management of Steam Boilers, Pumps, Injectors, etc., and Steam Plants generally. Containing complete instructions, and many valuable suggestions for the safe, practical, and economical management of the Steam Plant.

Especially intended for those who seek promotion, and aspire to be something more than a "Coal hustler," and for the benefit of Firemen and Engineers who do not "know it all" and who are willing to profit by the suggestions, etc., of "one who has been there."

In writing this book it has been the aim of the author to give the duties of the fireman, or the one in charge of a steam plant, in as simple and concise a manner as the subject and the English language will admit of; and to furnish all the information required to enable them to take charge of and operate a steam plant successfully and economically.

ELECTRICIAN PUBLISHING COMPANY,

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 6000-lb. barrel lots. Sold under strict guaranty.

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

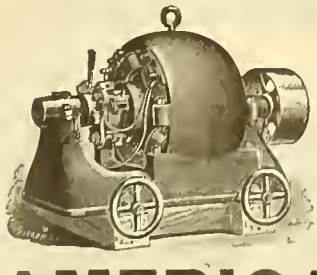
AMERICAN-BALL ENGINE.



The result of twenty-five years' experience with four thousand engines, designed and built by Mr. Frank H. Ball.

The latest development in practical steam engineering. New features, improved design and finish, but the same old valve that has saved thousands of tons of coal in the last quarter of a century, and is the only form of valve used in single valve automatics, that follows its own wear, and never leaks.

We also build a full line of multipolar dynamos and motors, and our new six-pole generators are adapted to our **American-Ball Engine,** making complete and symmetrical generating units

AMERICAN ENGINE CO., Bound Brook, N. J.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators; How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dyname; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Meter; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

JUST WHAT YOU ARE LOOKING FOR!

A New and Valuable Book

Electric Lighting Plants,

THEIR COST AND OPERATION.

By W. J. Buckley. With numerous illustrations, diagrams, plans, tables, etc. 275 pages. Cloth. Price, $2.00, postage free. This work gives all necessary data for the erection of an electric light plant of any size. The cost of Arc Lighting. The cost of Incandescent Lighting.

READ THE TABLE OF CONTENTS:

Alternating Arc Lamps, Arc Plants, Belting, Boilers, Boiler Settings, Boiler Efficiencies, Books, Building, Cost of Arc Dynamos and Lamps, Cost of Arc Plants Erected, Cost of Alternating Dynamos, Cost of Alternating Plants Erected, Cost of Belts, Cost of Boilers, Cost of Brick Chimneys, Cost of Copper for Alternating Circuit, Cost of Corliss Engines, Cost of Compound Corliss Engines, Cost of Compound High Speed Engines, Cost of Condensers, Cost of Friction Clutch Pulleys, Cost of Heaters, Cost of High Speed Engines, Cost of Incandescent Dynamos, Cost of Idlers, Cost of Injectors, Cost of Meters, Cost of Motors, Cost of Operating Lamps per hour, Cost of Power Generators. Cost of Poles, Cost of Plain Pulleys, Cost of Pillow Blocks, Cost of Pumps, Cost of Shafting, Cost of Shaft Couplings, Cost of Stacks—iron, Cost of Stacks—brick, Cost of Steam, Cost of Transformers, Cost of Wire, Chimneys, Circuit Loss, Contract Blanks, Current Distribution, Circuits—overhead, Circular Mils of Wire, Depreciation, Direct Connected Apparatus, Dynamos, Dynamo Data, Economy of Condensing, Economy of Covering Steam Pipes, Economy of Heater, Efficiency of Engines, Engines, Equivalent of Current in Horse Power, Equivalent Rates of Lighting, Fuel, Horse Power of Belting, Horse Power of Motors, Horse Power of Shafting, Incandescent Arc Lamps, Instruments, Instructions for Employes, Insulation, Labor, Load Chart, Meter Connections, Municipal Ownership, Natural Gas, N.E.L.A. Standard Rules, Oil, Outcome of Practical Management, Pole Line, Pulleys, Rope Transmission, Resistance of Wire, Rules—Fire Underwriters, Report Com. on Data N. E. L. A., Reports of Cities Owning Plant, Reports of Cities Contracting, Stock Room, Shafting, Transformers, Transformer Curves, Wiring Tables—Primary Wiring, Wiring Tables—Secondary Wiring, Wiring Tables, Motor Wiring, Wire, Wire Formula, Water Power, Wood as Fuel. The only book of its kind in the English Language. **Price, $2.00.**

The Setting Sun

greets the "Pioneer" as his most worthy successor, and when the "Pioneer" is burning it is most difficult to note when the sun has set and his life-long successor begun to supply artificial daylight. Sunlight is a cheap blessing and the "Pioneer" though its chief aim is quality, on the long run is the most economical light yet invented. It burns 150 hours without change of carbons, gives a soft, steady light and is simple and safe.

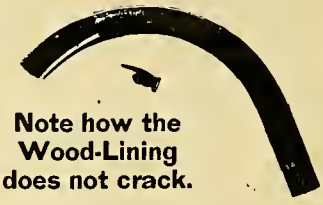
"ARMORITE"!

INTERIOR CONDUIT

(CUMMING'S PATENTS.)

Here's the way it looks inside after bending:

This piece of Armorite Interior Conduit was sawed, as indicated, just after bending in two places, and to show clearly that the bending DID NOT HURT THE WOODEN LINING, the piece cut out was set on end as shown, photographed, and from said photograph the accompanying cut was made.



Note how the Wood-Lining does not crack.

ARMORITE INTERIOR CONDUIT CO., OFFICE AND WORKS, 478-480 FORT STREET, WEST, DETROIT, MICH.

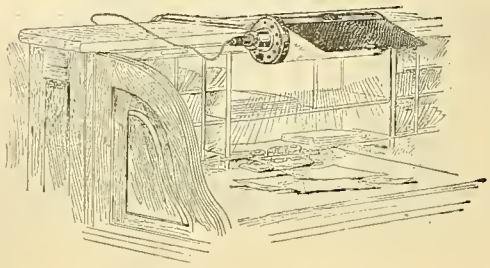
SAVE YOUR EYES BY USING THE

KINSMAN DESK LIGHT.



It has been tried for three years and has not been found wanting. Users from Maine to California testify to its worth. NO HIGH PRICED CANDELABRA LAMPS to be renewed. The Kinsman Desk Light is made for ANY STANDARD LAMP, to 32 candle power in size.

Kinsman Desk Light. Nickel Plate or Polished Brass..... **$6.00**
Kinsman Desk Light. Dark Green Enamel, with Gold Stripings..... **3.75**
Kinsman Portable No. 1. Nickel Plate or Polished Brass..... **8.00**
Kinsman Portable No. 1. Dark Green Enamel, with Gold Stripings..... **5.00**
Kinsman Portable No. 2. Nickel Plate or Polished Brass..... **7.00**

NOTE.—Sockets are not furnished with the fixtures having the enamel finish, but they are fitted with a holder adapted for any standard socket. **Write for discounts.**

CAUTION. There are now a number of cheap and crude imitations of the **Kinsman Desk Light** on the market, one of which is being advertised under a somewhat **similar name.** The Kinsman Desk Light was invented by Walter R. Kinsman, of Arlington, N. J. His invention was purchased outright by us, and has always been manufactured and sold by us. **Be careful** to see that the **eye shade** is adjustable to suit narrow or wide desks, that there is a **revolving glass cylinder** with both ground and clear glass, so that you may get the full effect of the light, or it may be softened at pleasure, and **be especially careful** to see that **any standard lamp** up to 32 c. p. may be used. Do not be misled by pictures on paper, but insist on seeing the goods.

McLEOD, WARD & CO.,

27 Thames St., New York.

REPAIRING.

All kinds of electrical machinery repaired quickly and to your entire satisfaction, cheaper than it can be done in larger cities. I pay no rent and employ no cheap help. Send me trial order. You will try me again.
S. T. Webber, Elec. and Mech. Engr., **Eldorado, Ill.**

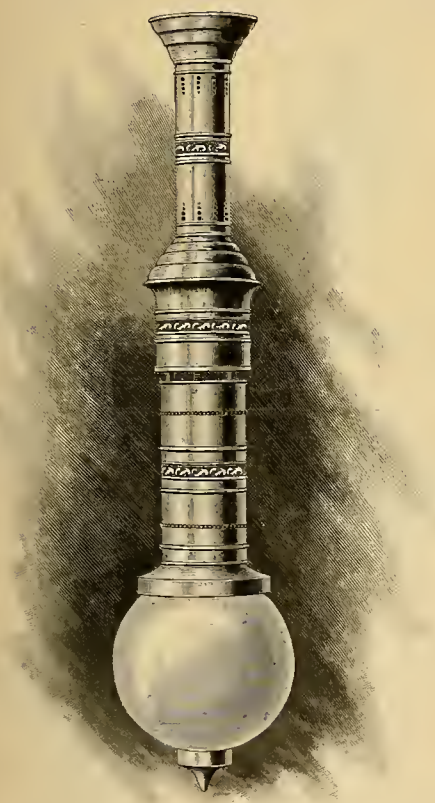
A GREAT ADVANCE IN INCLOSED ARC LAMPS

HAS BEEN MADE AND IS NOW EMBODIED IN THE

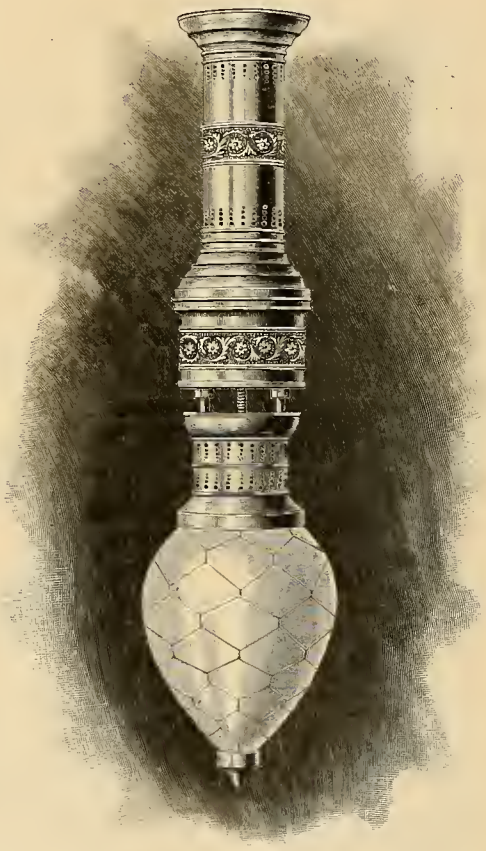
New Knight Arc Lamps.



INCLOSED ARC LAMP FOR CONSTANT POTENTIAL CIRCUITS.
BURNS 100 TO 150 HOURS.
MECHANICALLY PERFECT.

The new **KNIGHT INCLOSED LAMPS** bring to perfection the adaptation of the inner globe; do away with cumbersome side rods, entirely eliminating shadows — never before accomplished — and combines the most scientific ideas in arc lighting in compact, durable and artistic lamps.

Furnished in Japan, Polished Brass, White Enamel, Venetian Wrought-Iron and other designs.



PERFECTED KNIGHT LAMP.
TWO IN SERIES ON 110 VOLT CIRCUIT.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.
BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRA ·TRADE MARK·

HIGH GRADE NUERNBERG CARBONS

FOR DIRECT CURRENT ARC LAMPS. FOR ALTERNATING CURRENT ARC LAMPS.

SEND FOR LATEST PRICE LIST TO

HUGO REISINGER, NO. 38 BEAVER STREET, NEW YORK. SOLE IMPORTER FOR THE UNITED STATES AND CANADA.

IF you are anxious to secure the latest electrical books, **YOU** should write to the ElectricianPublishing Co., Chicago. You **CAN'T** procure too many reliable, readable books to **READ.**

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

THE AMERICAN CARBON CO.,

Noblesville, Ind., U. S. A.

WHY

Is the General Electric Company's Long Burning Arc Lamp the ideal long-service lamp?

BECAUSE

Its use induces a reduction in the carbon account, saves trimming expense and economizes current.

AND BECAUSE

The lamp gives off no dust, the frame rods cast no shadows, the lamp does not hiss and sputter.

Write for Our Illustrated Pamphlet.

An Electric Stew Pan.

THIS is a universal utensil, very attractive in appearance, and one of the most salable of electric heating devices. The heater consists of a 4½-inch disc to which is fitted a (removable) *aluminum* stew pan, with capacity of ¾ of a quart. Just the thing to use in light housekeeping, exactly what is wanted in a physician's office, drug store, hospital, the nursery, or where a little food is to be cooked, a hot drink made, or hot water used. Quick, clean, and inexpensive. Connects to any lamp socket. Packed complete with cord and plug. Made for any lighting circuit.

No.		Amperes at 110 Volts.	Price.
1720.	Heater and Aluminum Stew Pan	2	$5.00

X-RAYS
FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 80 Pages. 39 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing 25 Cents in stamps, postal note, express money order, and get one of these valuable books.

The Electric Motor and Its Applications.

BY T. C. MARTIN AND JOSEPH WETZLER.

THIRD EDITION.

With an Appendix by Dr. Louis Bell, bringing the book down to date.

Cloth, 315 large quarto pages, 353 Illustrations. Price, $3.00.

The wealth of information contained in the three hundred and odd large double-column pages of this important work is equaled in few special technical treatises, even those of a professedly exhaustive character. More than one hundred different motors are described and illustrated—many in great detail—and the different applications are similarly fully treated. Many of the illustrations are full page, and the details of construction, particularly of armatures, are fully illustrated. The treatment is simple, clear and concise, and little mathematics is employed, the work being essentially of a practical and largely of a descriptive character. The section on alternating motors resumes in a simple manner without mathematical formulæ, the principles upon which they are based, and that on thermo-magnetic motors treats this interesting class in greater detail than can be found in any other publication. An interesting feature is the historical method of treatment, by means of which the different steps in the advance of theories and design can be clearly traced, and the varying results of explorations in many directions instructively followed.

CONTENTS.

Chapter I. Elementary Considerations.—Chapter II. Early Motors and Experiments in Europe.—Chapter III. Early Motors and Experiments in America.—Chapter IV. The Electrical Transmission of Power.—Chapter V. The Modern Electric Railway and Tramway in Europe.—Chapter VI. The Modern Electric Railway and Street-car Line in American.—Chapter VII. The Use of Storage Batteries with Electric Motors for Street Railways.—Chapter VIII. The Industrial Application of Electric Motors in Europe.—Chapter IX. The Industrial Application of Electric Motors in America.—Chapter X. Electric Motors in Marine and Aërial Navigation.—Chapter XI. Telpherage.—Chapters XII, XIII. Latest American Motors and Motor Systems.—Chapter XIV. Latest European Motors and Motor Systems.—Chapter XV. Alternating Current Motors.—Chapter XVI. Thermo-magnetic Motors.—Appendix. The Development of the Electric Motor since 1888.

DOMESTIC Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

	Head.	Rev. per Min.	Cu. Ft. per Sec.	H. P.	Per Cent.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

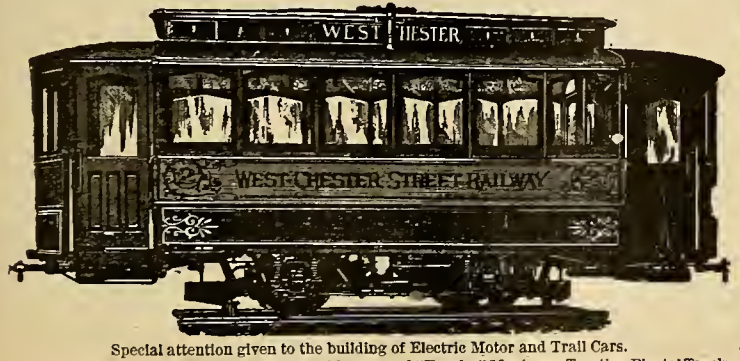
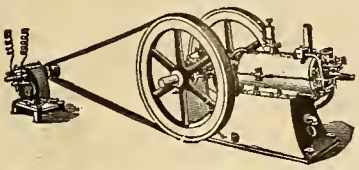
New Dynamo Tenders' Hand-Book.
By F. B. BADT.
226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.
This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 5,000 of the new.
Electrician Publishing Co.,
Suite 510 Marquette Building, CHICAGO.

J. G. BRILL COMPANY, - - - PHILADELPHIA,
BUILDERS OF RAILWAY AND TRAMWAY CARS OF ALL CLASSES.



Special attention given to the building of Electric Motor and Trail Cars.
Builders of Brill No. 21 Truck with solid forged frame, and "Eureka" Maximum Traction Pivotal Truck.

CHICAGO GAS and GASOLINE ENGINE



Used for making Electric Light or furnishing power for any purpose required. Specially adapted for electric light in private enterprises. The latest great invention of this progressive age. Built in from 2 to 60 horse power. Stationary or portable. Is the simplest power on the market. A dwarf in size; a Samson in strength. Costs but little to run it. Has no equal for even speed and durability. Send for catalogue.
J. J. NORMAN CO., Mfrs., - 60 and 62 S. Clinton Street, CHICAGO.

Aluminum Nickel Alloy.
Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.
This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its finidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.
Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

INFORMATION, CAUTION AND NOTICE.

The courts of last resort in patent causes have repeatedly and recently sustained **BRUSH PATENTS FOR STORAGE BATTERIES,** Nos. 266,090 and 337,299, dated October 17, 1882, and March 2, 1886, covering broadly every practical type of storage battery plate, including not only pasted plates, but also the so-called Plante plates, in the words of **Judge Shipman** (52d Fed. 130): **"A secondary battery plate ribbed, honeycombed, studded or equivalently prepared . . . . in which the Plante process of electrical disintegration or some kindred process of forming was used."**

In the interest of the development of the storage battery business these fundamental or basic patents have been acquired at great expense by **The Electric Storage Battery Company,** and users, vendors and makers of storage batteries and storage battery plates are cautioned against their infringement.

To guard users, vendors and purchasers against inadvertent and unadvised infringement, notice is hereby given that the types of batteries and plates advertised by the following:

The Electro-Chemical Storage Battery Company,
The Willard Electric & Battery Company,
The Ohio Storage Battery Company,
Norwalk Electric & Battery Company,
The Warwick Electric Manufacturing Company,
Electric Novelty Works,
Momence Electric Ball Storage Battery Company,
Silvey Storage Battery Company (Dayton Mfg. Co.),
The Haschke Storage Battery Company,
Woodward Electrical Company,
Devere Electric Company,
D. J. Hauss,
Eclipse Electric Company,
The American Storage Battery Company,

Are considered flagrant infringements; and further, that vendors, purchasers and users thereof will be prosecuted by injunction and otherwise according to law.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures. Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current: How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors: General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

REWIRED WITH RAVEN WHITE CORE WIRE

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY.

CHICAGO, April 30, 1896.
NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.
As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.
Yours very truly
THE FERRIS WHEEL CO.

The Setting Sun

greets the "Pioneer" as his most worthy successor, and when the "Pioneer" is burning it is most difficult to note when the sun has set and his life-long successor begun to supply artificial daylight. Sunlight is a cheap blessing and the "Pioneer" though its chief aim is quality, on the long run is the most economical light yet invented. It burns 150 hours without change of carbons, gives a soft, steady light and is simple and safe.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.

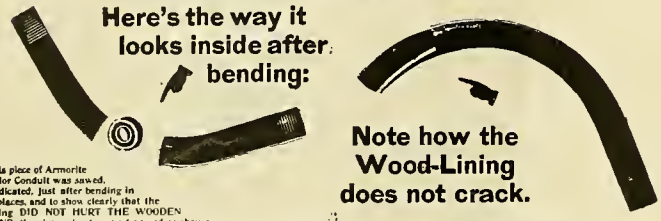
"ARMORITE"!

INTERIOR CONDUIT

(CUMMING'S PATENTS.)

Here's the way it looks inside after bending:



This piece of Armorite Interior Conduit was sawed, as indicated, just after bending in two places, and to show clearly that the bending DID NOT HURT THE WOODEN LINING, the piece cut out was set on end as shown, photographed, and from said photograph the accompanying cut was made.

Note how the Wood-Lining does not crack.

ARMORITE INTERIOR CONDUIT CO., OFFICE AND WORKS. 470-480 FORT STREET, WEST, DETROIT, MICH.

CONSOLIDATED INSULATED TUBE COMPANY,

--- Manufacturers of ---

INSULATING TUBING

FOR

Interior or Underground .... Electrical Wiring.

John Hancock Building, = = Boston, Mass.

We manufacture a high grade Knife Switch for switchboard work. We call it the E Switch.

A quick break switch, made in sizes from 50 amperes capacity to 800 amperes. They will be listed in our new catalog. We manufacture arc and incandescent dynamos and direct current motors. Also arc lamps.

We have in stock in our Chicago Store

WAITING FOR YOUR ORDERS

Sockets, Switches, Cut-Outs,
Tubes and Insulators,
Shawmut Fuse Wire and Knife Switches,
Bells, Annunciators,
Batteries, Push Buttons,
Fan Motors, Electric Supplies of all Kinds.

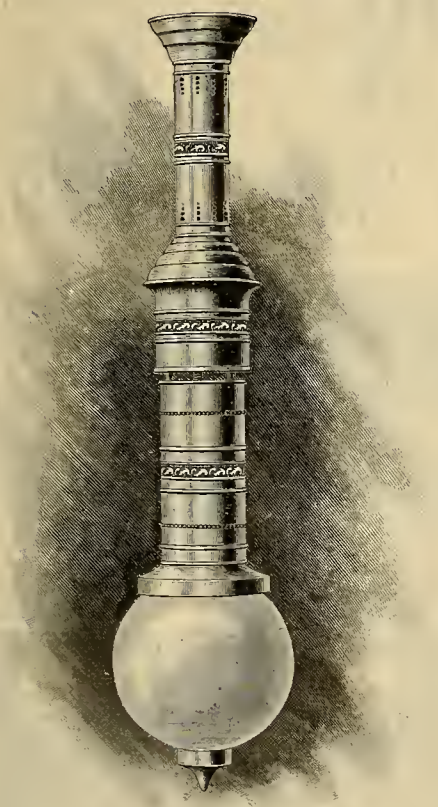
A GREAT ADVANCE IN INCLOSED ARC LAMPS

HAS BEEN MADE AND IS NOW EMBODIED IN THE

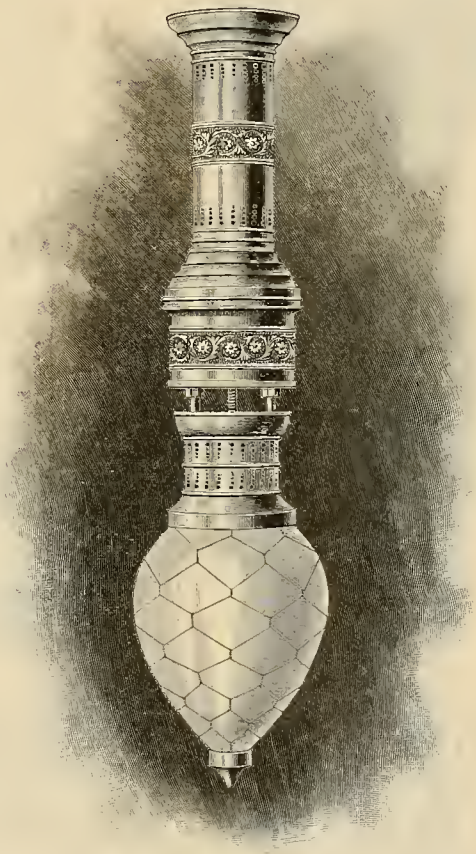
New Knight Arc Lamps.



INCLOSED ARC LAMP FOR CONSTANT POTENTIAL CIRCUITS.
BURNS 100 TO 150 HOURS.
MECHANICALLY PERFECT.

The new **KNIGHT INCLOSED LAMPS** bring to perfection the adaptation of the inner globe; do away with cumbersome side rods, entirely eliminating shadows — never before accomplished — and combines the most scientific ideas in arc lighting in compact, durable and artistic lamps.

Furnished in Japan, Polished Brass, White Enamel, Venetian Wrought-Iron and other designs.



PERFECTED KNIGHT LAMP.
TWO IN SERIES ON 110 VOLT CIRCUIT.

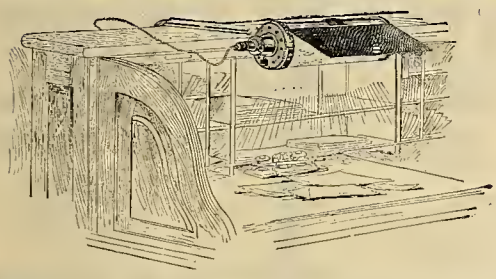
SAVE YOUR EYES BY USING THE

KINSMAN DESK LIGHT.



It has been tried for three years and has not been found wanting. Users from Maine to California testify to its worth. NO HIGH PRICED CANDELABRA LAMPS to be renewed. The Kinsman Desk Light is made for ANY STANDARD LAMP, to 32 candle power in size.

Kinsman Desk Light, Nickel Plate or Polished Brass	**$6.00**
Kinsman Desk Light, Dark Green Enamel, with Gold Stripings	**3.75**
Kinsman Portable No. 1, Nickel Plate or Polished Brass	**8.00**
Kinsman Portable No. 1, Dark Green Enamel, with Gold Stripings	**5.00**
Kinsman Portable No. 2, Nickel Plate or Polished Brass	**7.00**

NOTE.—Sockets are not furnished with the fixtures having the enamel finish, but they are fitted with a holder adapted for any standard socket. **Write for discounts.**

CAUTION. There are now a number of cheap and crude imitations of the **Kinsman Desk Light** on the market, one of which is being advertised under a somewhat **similar name.** The Kinsman Desk Light was invented by Walter R. Kinsman, of Arlington, N. J. His invention was purchased outright by us, and has always been manufactured and sold by us. **Be careful** to see that the **eye shade** is adjustable to suit narrow or wide desks, that there is a **revolving glass cylinder** with both ground and clear glass, so that you may get the full effect of the light, or it may be softened at pleasure, and **be especially careful** to see that **any standard lamp** up to 32 c. p. may be used. Do not be misled by pictures on paper, but insist on seeing the goods.

ALCATRAZ ELECTRICAL COMPOUND,

THE CALIFORNIA ASPHALT CO. OF NEW YORK — ALCATRAZ ELECTRICAL COMPOUND

Manufactured by

The California Asphalt Co.,

57 E. 59th Street, NEW YORK.

ABSOLUTELY UNEQUALED FOR . . .

ELECTRICAL AND WIRE INSULATION, Insulating Connections, Dynamos and Motor Bases, Battery and Accumulator Shelving, Circuit and Switch-Boards.
WATER-PROOFING Cut-Out Boxes, coating wires when subjected to acid or alkaline fumes, and when laid under cement, etc.
PAINTING Poles, Brackets, Cross-Arms, Benches, Floors, etc.
COATING CABLES, Lead-Covered Pipes, and all underground work.

ALCATRAZ ELECTRICAL COMPOUND is manufactured of the celebrated brand of Alcatraz Asphalt, and possesses many well-known points of superiority. It has been tried under severe and exacting conditions, and has given perfect satisfaction.

It will not Scale, Crack or Burn. Presents a Smooth Surface. Adheres Tenaciously.
Not affected by Thermal or Climatic Conditions.
Resists the action of the Elements, Acids, Alkalies, Sewer Gases, and possesses great strength and elasticity.

Being the producers of the raw product, we are enabled to save the middleman's profit, and offer consumers a superior article at a very low price. **Send for price list.** . . . . .

PRACTICAL Guide for Firemen,

By W. H. WAKEMAN.

Price 75 Cents.

80 pages, 14 illustrations, bound in cloth.

An elementary treatise relating to the care and management of Steam Boilers, Pumps, Injectors, etc., and Steam Plants generally. Containing complete instructions, and many valuable suggestions for the safe, practical, and economical management of the Steam Plant.

Especially intended for those who seek promotion, and aspire to be something more than a "Coal hustler," and for the benefit of Firemen and Engineers who do not "know it all" and who are willing to profit by the suggestions, etc., of "one who has been there."

In writing this book it has been the aim of the author to give the duties of the fireman, or the one in charge of a steam plant, in as simple and concise a manner as the subject and the English language will admit of; and to furnish all the information required to enable them to take charge of and operate a steam plant successfully add economically.

ELECTRICIAN PUBLISHING COMPANY,

DOMESTIC Electrical Work.

Coocise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructious whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.
The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

J. G. BRILL COMPANY, - - - PHILADELPHIA,
BUILDERS OF RAILWAY AND TRAMWAY CARS OF ALL CLASSES.

Special attention given to the building of Electric Motor and Trail Cars.
Builders of Brill No. 21 Truck with solid forged frame, and "Eureka" Maximum Traction Pivotal Truck.

Aluminum Nickel Alloy.

Manufactured by The National Ore & Reduction Co., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

VICTORY

OF

WESTERN TELEPHONE CONSTRUCTION CO.,

OVER THE

American Bell Telephone Co.

TO THE TELEPHONE PUBLIC:

The American Bell Telephone Co. and its side partner, the Western Electric Co., have long tried to intimidate the public against using telephones manufactured by the Western Telephone Construction Co., on the ground that it infringed the famous Watson patent, No. 270,522, covering the telephone switch.

The Western Telephone Construction Co. has been sued on this patent, and has been fighting the matter in the courts for nearly two years. On November 7th it exploded a bomb in the enemy's camp by introducing into the Court evidence, a certified copy of **a Canadian patent** covering the **same invention,** granted to Watson July 30, 1880, and which **expired** on July 30, 1895. By the famous Bate-Refrigerator case, the **American patent expired with the Canadian patent** on this latter date, and the invention covered thereby has since been public property.

THE CANADIAN PATENT WAS KNOWN TO EXIST BY THE BELL COMPANY, AS THE NAMES OF THEIR PROMINENT ATTORNEYS APPEAR ON THE PATENT. THE PUBLIC MAY DRAW ITS OWN CONCLUSIONS.

While other so-called telephone companies have allowed their customers to be persecuted by the Bell Co. and its allies, by not protecting them from patent suits brought against them, the Western Telephone Construction Co. has not only been successfully fighting its own battles, but also those of its customers. **It will continue to do so.**

WESTERN TELEPHONE CONSTRUCTION CO., Chicago, Ill.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

Published and for sale by ELECTRICIAN PUBLISHING CO.; Suite 510 Marquette Building, CHICAGO.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated. Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Staoley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

THE LATEST BOOK.

"ELECTRIC LIGHTING,"

A PRACTICAL EXPOSITION OF THE ART FOR THE USE OF

Engineers, Students and Others Interested in the Installation or Operation of Electrical Plants.

BY FRANCIS B. CROCKER,

Professor of Electrical Engineering, Columbia University, New York.

Price $3, Prepaid. - Practical and Up-to-Date.

Just the Book you want. 450 Pages, over 150 Illustrations. Read the

TABLE OF CONTENTS:

Chapter I, Introduction; Chapter II, History of Electric Lighting; Chapter III, General Units and Measures; Chapter IV, Classification and Selection of Electric Lighting System; Chapter V, The Location and General Arrangement of Electric Lighting Plants; Chapter VI, Buildings for Electric Lighting Plants; Chapter VII, Possible Sources of Electrical Energy; Chapter VIII, The Steam Engine, History and General Principles; Chapter IX, Steam Boilers for Electric Lighting; Chapter X, Steam Engines for Electric Lighting, General Construction; Chapter XI, Typical Forms of Steam Engine for Electric Lighting; Chapter XII, Steam Engines for Electric Lighting, Selection, Installation and Management; Chapter XIII, Gas, Oil and Hot Air Engines; Chapter XIV, Water Wheels and Windmills; Chapter XV, Mechanical Connections between Engines and Dynamos, Direct Coupling, Belting and Shafting; Chapter XVI, Toothed, Friction and Other Gearing; Chapter XVII, Principles, Construction and Management; Chapter XXI, Applications of Accumulators in Electric Lighting; Chapter XXII, Switchboards, Including Switches, Fuses and Circuit-Breakers; Chapter XXIII, Electrical Measuring Instruments; Chapter XXIV, Lightning Arresters.

Every Engineer and Electrician who desires to thoroughly master the Art of Electric Lighting should have a copy of this book. Sent promptly.

ELECTRICIAN PUBLISHING COMPANY, Suite 510 Marquette Building, CHICAGO.

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

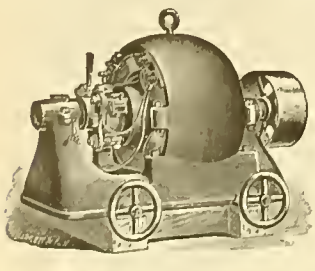
WESTERN ELECTRICIAN

Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been **FOUND** that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the **NORTH POLE.**

AMERICAN-BALL ENGINE.



The result of twenty-five years' experience with four thousand engines, designed and built by Mr. Frank H. Ball.

The latest development in practical steam engineering. New features, improved design and finish, but the same old valve that has saved thousands of tons of coal in the last quarter of a century, and is the only form of valve used in single valve automatics, that follows its own wear, and never leaks.

We also build a full line of multipolar dynamos and motors, and our new six-pole generators are adapted to our **American-Ball Engine,** making complete and symmetrical generating units

AMERICAN ENGINE CO., Bound Brook, N. J.

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

WHY

Is the General Electric Company's Long Burning Arc Lamp the ideal long-service lamp?

BECAUSE

Its use induces a reduction in the carbon account, saves trimming expense and economizes current.

AND BECAUSE

The lamp gives off no dust, the frame rods cast no shadows, the lamp does not hiss and sputter.

THE K. A. K. CONDUIT SYSTEM.

Simple in Construction.

Successfully Stood the Severe Tests of Last Winter's Snowstorms.

Practical in Operation.

SEND FOR FULL PARTICULARS.

KROTZ, ALLEN & KELLY, SPRINGFIELD, OHIO.

Alcatraz Electrical Compound,

Manufactured by

THE CALIFORNIA ASPHALT CO., 57 East 59th St., NEW YORK.

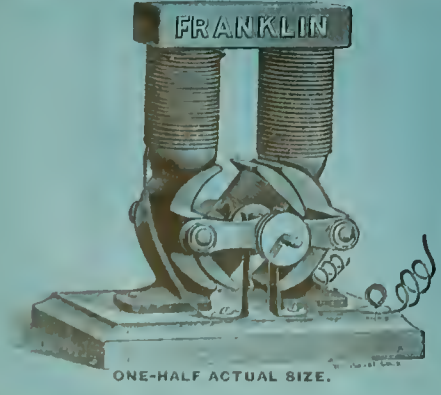
ABSOLUTELY UNEQUALED FOR

ELECTRICAL AND WIRE INSULATION, Insulating Connections, Dynamos and Motor Bases, Battery and Accumulator Shelving, Circuit and Switch-Boards.
WATER-PROOFING Cut-Out Boxes, coating wires when subjected to acid or alkaline fumes, and when laid under cement, etc.
PAINTING Poles, Brackets, Cross-Arms, Benches, Floors, etc.
COATING CABLES, Lead-Covered Pipes, and all underground work.

ALCATRAZ ELECTRICAL COMPOUND is manufactured of the celebrated brand of Alcatraz Asphalt, and possesses many well-known points of superiority. It has been tried under severe and exacting conditions, and has given perfect satisfaction. **It will not Scale, Crack or Burn. Presents a Smooth Surface. Adheres Tenaciously. Not affected by Thermal or Climatic Conditions. Resists the action of the Elements, Acids, Alkalies, Sewer Gases, and possesses great strength and elasticity.** Being the producers of the raw product, we are enabled to save the middleman's profit, and offer consumers a superior article at a very low price. **Send for price list.**

C. P. WILLIAMS, Sole Agent U. S. A., 39-41 Cortlandt St., New York City.

$1.00 FRANKLIN MOTOR $1.00



ONE-HALF ACTUAL SIZE.

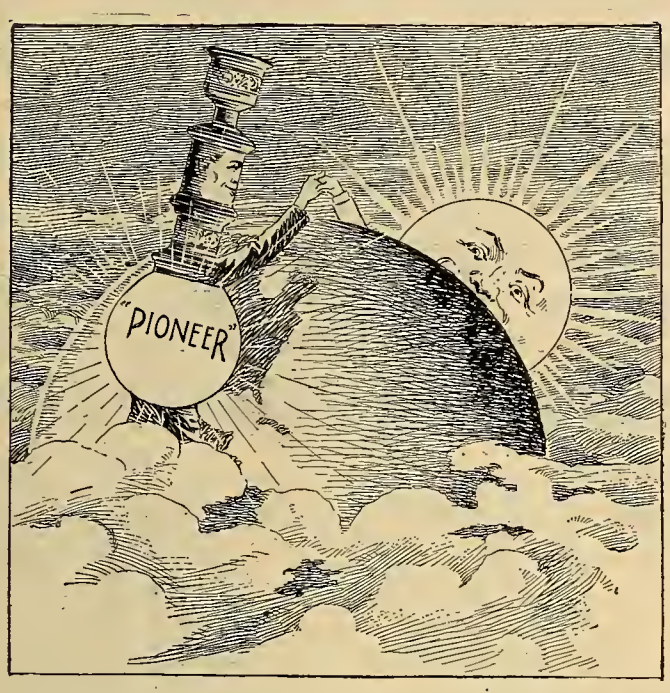
Do not fail to have it on your list of holiday goods. Positively the best selling novelty yet produced. Note prices. . . . .

Box containing 100 dollar Franklin Motors.....$50.00
Box containing 54 " Franklin Motors.....$30.00

CAN FILL ALL ORDERS PROMPTLY.

FRANKLIN ELECTRIC & MFG. CO.,

Miamisburg, - - Ohio.



The Setting Sun

greets the "Pioneer" as his most worthy successor, and when the "Pioneer" is burning it is most difficult to note when the sun has set and his life-long successor begun to supply artificial daylight. Sunlight is a cheap blessing and the "Pioneer" though its chief aim is quality, on the long run is the most economical light yet invented. It burns 150 hours without change of carbons, gives a soft, steady light and is simple and safe.

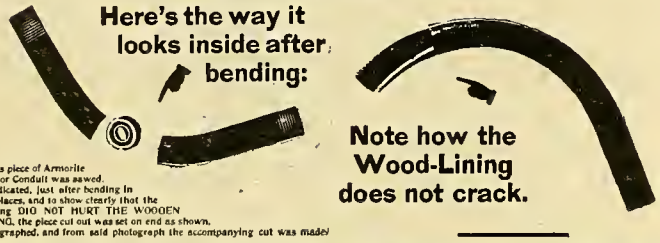
"ARMORITE"!

INTERIOR CONDUIT

(CUMMING'S PATENTS.)

Here's the way it looks inside after bending:



Note how the Wood-Lining does not crack.

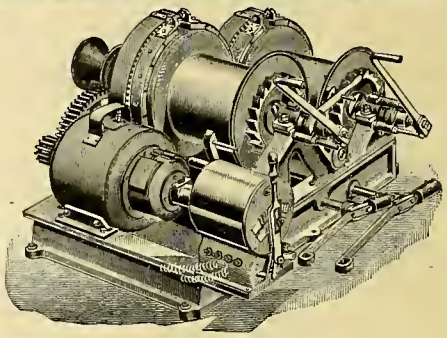
This piece of Armorite Interior Conduit was sawed as indicated, just after bending in two places, and to show clearly that the bending DID NOT HURT THE WOODEN LINING, the piece cut out was set on end as shown, photographed, and from said photograph the accompanying cut was made.

ARMORITE INTERIOR CONDUIT CO.,

OFFICE AND WORKS, 476-480 FORT STREET, WEST, DETROIT, MICH.

THE . . .

Storey Motors.



Iron-clad. Completely Closed In. Dust and Moisture Proof. No External Magnetism.

Specially Adapted for Direct Connection to Machinery.

Special Direct Current Motors for All Classes of Work.

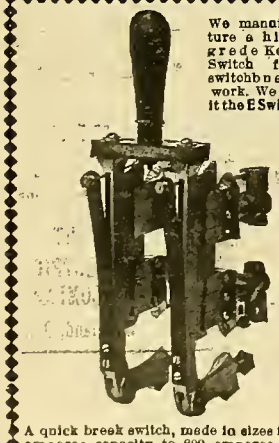
CHICAGO OFFICE: Metropolitan Elec. Co., 186-188 Fifth Ave.
NEW YORK OFFICE: 136 Liberty Street.
BRANCH FACTORY: Hamilton, Canada.



We manufacture a high grade Knife Switch for switchboard work. We call it the E Switch.

A quick break switch, made in sizes from 50 amperes capacity to 800 amperes. They will be listed in our new catalog. We manufacture arc and incandescent dynamos and direct current motors. Also arc lamps.

We have in stock in our Chicago Store

WAITING FOR YOUR ORDERS

Sockets, Switches, Cut-Outs,
Tubes and Insulators,
Shawmut Fuse Wire and Knife Switches,
Bells, Annunciators,
Batteries, Push Buttons,
Fan Motors, Electric Supplies of all Kinds.

Western Electric Company.

Chicago. New York.

ELECTRIC HEATERS AVAILABLE TO ALL. MINIMUM EXPENSE.

Portable Heater for residences and offices, size 23 inches long, 11½ inches high, 5 inches wide. Weight 30 pounds.

Highest Efficiency, Simplicity, Durability, Production Guaranteed. Our Street Car Heaters lead all competitors.

Send for new illustrated circular.

Heating coils renewed like incandescent lamps. Constructed for any voltage. Work on direct or alternating current. Consumes 6. 8 amperes on 110 volt current, 1. 5 on 500 volt current.

NEW EDITION.
X-RAYS
FOR EVERYBODY.
By Edward Trevert.
Just off the Press. 93 Pages. 47 Illustrations.
Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.
Write us at once, enclosing 25 Cents in stamps, postal note, express money order, and get one of these valuable books.

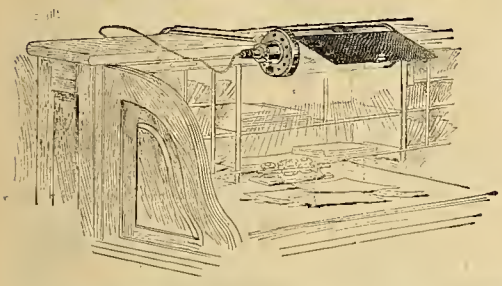
SAVE YOUR EYES BY USING THE

KINSMAN DESK LIGHT.



It has been tried for three years and has not been found wanting. Users from Maine to California testify to its worth. NO HIGH PRICED CANDELABRA LAMPS to be renewed. The Kinsman Desk Light is made for ANY STANDARD LAMP, to 32 candle power in size.

Kinsman Desk Light, Nickel Plate or Polished Brass	**$6.00**
Kinsman Desk Light, Dark Green Enamel, with Gold Stripings	**3.75**
Kinsman Portable No. 1, Nickel Plate or Polished Brass	**8.00**
Kinsman Portable No. 1, Dark Green Enamel, with Gold Stripings	**5.00**
Kinsman Portable No. 2, Nickel Plate or Polished Brass	**7.00**

NOTE.—Sockets are not furnished with the fixtures having the enamel finish, but they are fitted with a holder adapted for any standard socket. **Write for discounts.**

CAUTION. There are now a number of cheap and crude imitations of the **Kinsman Desk Light** on the market, one of which is being advertised under a somewhat **similar name.** The Kinsman Desk Light was invented by Walter R. Kinsman, of Arlington, N. J. His invention was purchased outright by us, and has always been manufactured and sold by us. **Be careful** to see that the **eye shade** is adjustable to suit narrow or wide desks, that there is a **revolving glass cylinder** with both ground and clear glass, so that you may get the full effect of the light, or it may be softened at pleasure, and **be especially careful** to see that **any standard lamp** up to 32 c. p. may be used. Do not be misled by pictures on paper, but insist on seeing the goods.

McLEOD, WARD & CO.,

27 Thames St., New York.

IF you are anxious to secure the latest electrical books, **YOU** should write to the ElectricianPublishing Co., Chicago. You **CAN'T** procure too many reliable, readable books to **READ.**

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

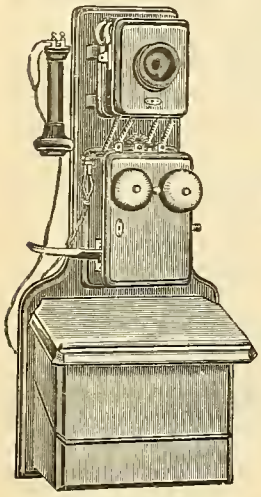
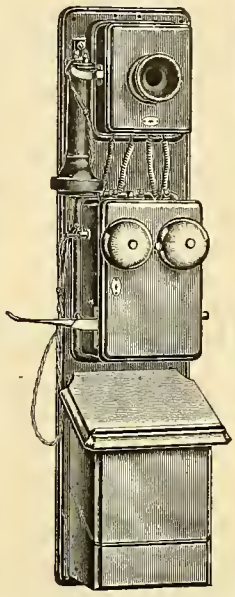
VIADUCT MFG. COMPANY



Is the **oldest** concern of the kind in this country, with one exception, manufacturing

Magneto Bells, Telephones, District Telegraph Messenger Boxes

and other appliances.



It has had 18 years' experience; 5 years as licensed manufacturer of the American Bell Telephone Company. It has made more Magneto Bells than all the other manufacturers in the country. Its standard work is known by all experienced telephone men.

The works are located at the Relay Station, Baltimore & Ohio Railroad, and run by water power.

It manufactures all of its own woodwork, as well as brass, iron, steel and everything connected with its output.

Send for new catalogue and mention this paper.

DOMESTIC
Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.
The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

PRACTICAL DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

Sent postpaid on receipt of price.

THE McCORMICK TURBINE,

On Vertical or Horizontal Shaft,
Especially Adapted for Electric Work.

Gives more power per diameter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH, York, Pa.

Estimates furnished for complete power plants and results guaranteed.

All janitors know

—that in large Office Buildings the man in No. 6 is always "too hot" while "No. 16" as constantly growls over being "too cold."

Where **The Webster System of Steam Heating** is installed, every man in the building can regulate his own Radiator to suit his individual whims. This feature is an immense advance beyond ordinary heating systems—one that pleases the tenant and greatly smoothes the janitor's pathway. We issue a very lucid little booklet that fully tells the story of this heating system. Would you like a copy?

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 5,000 of the new.

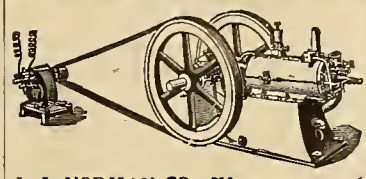
Electrician Publishing Co., Suite 510 Marquette Building, CHICAGO.

J. G. BRILL COMPANY, - - - PHILADELPHIA,

BUILDERS OF RAILWAY AND TRAMWAY CARS OF ALL CLASSES.

Special attention given to the building of Electric Motor and Trail Cars.
Builders of Brill No. 21 Truck with solid forged frame, and "Eureka" Maximum Traction Pivotal Truck.

CHICAGO GAS and GASOLINE ENGINE



Used for making Electric Light or furnishing power for any purpose required. Specially adapted for electric light in private enterprises. The latest great invention of this progressive age. Built in from 2 to 50 horse power. Stationary or portable. Is the simplest power on the market. A dwarf in size; a Samson in strength. Costs but little to run it. Has no equal for even speed and durability. Send for catalogue.

J. J. NORMAN CO., Mfrs., - 60 and 62 S. Clinton Street, CHICAGO.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

INFORMATION, CAUTION AND NOTICE.

The courts of last resort in patent causes have repeatedly and recently sustained **BRUSH PATENTS FOR STORAGE BATTERIES,** Nos. 266,090 and 337,299, dated October 17, 1882, and March 2, 1886, covering broadly every practical type of storage battery plate, including not only pasted plates, but also the so-called Plante plates, in the words of **Judge Shipman** (52d Fed. 130): **"A secondary battery plate ribbed, honeycombed, studded or equivalently prepared . . . . in which the Plante process of electrical disintegration or some kindred process of forming was used."**

In the interest of the development of the storage battery business these fundamental or basic patents have been acquired at great expense by **The Electric Storage Battery Company,** and users, vendors and makers of storage batteries and storage battery plates are cautioned against their infringement,

To guard users, vendors and purchasers against inadvertent and unadvised infringement, notice is hereby given that the types of batteries and plates advertised by the following:

The Electro-Chemical Storage Battery Company,
The Willard Electric & Battery Company,
The Ohio Storage Battery Company,
Norwalk Electric & Battery Company,
The Warwick Electric Manufacturing Company,
Electric Novelty Works,
Momence Electric Ball Storage Battery Company,
Silvey Storage Battery Company (Dayton Mfg. Co.),
The Haschke Storage Battery Company,
Woodward Electrical Company,
Devere Electric Company,
D. J. Hauss,
Eclipse Electric Company,
The American Storage Battery Company,
Samuels Dynamic Accumulator Company,
National Electric Car Lighting Company,

Are considered flagrant infringements; and further, that vendors, purchasers and users thereof will be prosecuted by injunction and otherwise according to law.

THE ELECTRIC STORAGE BATTERY CO.,

The Holidays are Coming.

Why not make a present of an electrical book to those you desire to remember at Christmas or New Year's? Useful presents are most appreciated. Note the following:

NEW DYNAMO TENDERS' HAND-BOOK.—By Lieut. F. B. Badt. One hundred and forty illustrations. Price $1.00. An entirely new and up-to-date work, 225 pages, flexible cloth binding, size of page 5¾ by 3½ inches. Designed for dynamo tenders, linemen, stationary and marine engineers. Just the book for men who wish to learn how to operate and care for electric light installations. The only book of the kind in the English language.

BELL HANGERS' HAND-BOOK.—By Lieut. F. B. Badt, Third Edition. Eighth Thousand. One hundred and six pages, 97 illustrations. Just the book for those engaged in selling, installing or handling Electric Batteries, Electric Bells, Elevator, House or Hotel Annunciators, Burglar or Fire Alarms, Electric Gas Lighting Apparatus, Electric Heat Regulating Apparatus, etc. The only book of its kind. Simple as A, B, C. Price $1.00.

ELECTRIC TRANSMISSION HAND-BOOK.—By Lieut. F. B. Badt. First Edition. Three Thousand Copies. Ninety-seven pages, twenty-two illustrations, twenty-seven original tables. Gives more practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers, and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants. A practical and reliable work. Price $1.00.

INCANDESCENT WIRING HAND-BOOK.—By Lieut. F. B. Badt. Profusely illustrated. Price $1.00. Type page 5½ by 3 inches; flexible cloth binding, sixty-six pages, thirty-five cuts and five tables, three of which are 12 by 18 inches. These tables give at once, and without any calculation, the size of wire required in each case for any percentage of loss. A timely book, containing full instructions for Incandescent Wiring, and complete information concerning Methods of Running Wires, Location of Safety Devices and Switches, Spliess, Insulation and Testing for Faults, Wire Gauges, General Electrical Data, Calculating Size of Wires, Wiring of Fixtures, Elevators, Buildings, Isolated and Central Station Plants. The only complete book of the kind published.

DERIVATION OF PRACTICAL ELECTRICAL UNITS.—By Lieut. F. B. Badt and Prof. H. S. Carhart. Price, postage prepaid, 75 cents. This is a very handsome book of sixty pages, printed on fine, heavy paper, with neat cloth binding. It contains Portraits and Biographies of Ohm, Watt, Faraday, Joule, Gauss, Weber, Sir William Siemens, Dr. Werner von Siemens, Volta, Ampere, Daniell and von Jacobi, together with a carefully prepared table of Practical Electrical Units, with their relative values. In no other single volume can this rare collection of portraits be found.

THE TELEPHONE HAND-BOOK. By Herbert Laws Webb. One hundred and forty-six pages, 138 illustrations, cloth, hand-book size, price $1.00. Extract from Preface: "This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the Telephone Hand-Book is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country." No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-books which have been so favorably received by the entire electrical fraternity.

THE BOOK YOU WANT.

DESMOND, CHAS.—Electricity for Engineers. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Alternate Current Apparats. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised Edition, 12mo, cloth, Chicago, 1893. $2.50.

BUCKLEY, W. J.—Electric Lighting Plants, their cost and operation. Two hundred and seventy-five pages, many illustrations and diagrams, cloth, 1894, $2.00; paper $1.00. The purpose of this work is to give to intending purchasers of lighting plants such details as may aid them in forming a fair estimate of the cost of construction and operation of a proposed plant. Data compiled from station reports of electric lighting plants employing overhead circuits, with suggestions pertaining to the information usually desired by the non-technical purchaser.

CROSBY, O. T., AND DR. LOUIS BELL.—The Electric Railway in Theory and Practice. A complete treatise on the construction and operation of electric railways. Second Edition, revised and enlarged. One hundred and eighty-three illustrations, 8vo, cloth, New York, 1892, $2.50. In this work will be found a full discussion of the principles, apparatus and methods of construction employed in electric railroading. The treatment of the subject is thoroughly practical, and will recommend itself alike to the electrical engineer, the student and the electric railway manager.

LOCKWOOD.—Electricity, Magnetism and Electric Telegraphy. A practical guide and hand-book of general information for electrical students, operators and inspectors. Three hundred and seventy-six pages, 152 illustrations, $2.50.

THOMPSON.—Dynamo-Electric Machinery. A text-book for students of electro-technics. Fourth Edition. Rewritten and revised. About 1,000 pages, fully illustrated, 39 plates. $6.00.

A DICTIONARY OF ELECTRIC WORDS, TERMS AND PHRASES.—By Prof. E. J. Houston. Third Edition, Revised and Enlarged. One volume, octavo, 750 pages, illustrated, cloth. Price $5.00. The new edition contains over 5,000 terms and 75 new illustrations. Concise definitions of electrical terms in general use, illustrated descriptions of electrical apparatus, and clear explanations of electrical phenomena. A work needed in every scientific library and an invaluable reference book to both students and professional men. One of the features of the dictionary is that it is not a mere word-book. The words, terms and phrases are invariably followed by a short, concise definition, giving the sense in which they are correctly employed.

ELECTRICITY AND MAGNETISM.—A series of thirty-four lessons, covering the science of electricity from its fundamental principles to its everyday practical application. Comprises 34 lessons, 325 pages, over 300 diagrams and illustrations, $2.00. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony of New York; Prof. Brown Ayres, Tulane University, New Orleans; Prof. A. C. Perrine, Leland Stanford University, California; Prof. Geo. D. Shepardson, University of Minnesota, and others. A comprehensive treatise in simple language, free from algebraic equations and easily understood. Table of Contents: 1. The nature and properties of electricity. 2. Machines for generating electricity by friction and by electric induction. 3. Electric batteries or appliances for generating electricity by chemical action. 4. Electric batteries, or appliances for generating electricity by chemical action (concluded). 5. The nature and properties of magnetism, magnetic fields. 6. The magnetic effects of electric currents, and magnetic circuits. 7. Ohm's law of the flow of electricity. 8. Heating effects of electric currents. Miscellaneous effects of electric currents. 9. Galvanometers and voltameters. 10. Measurement of electrical resistance. 11. Every-day measurements of electric currents and pressures. 12. Every-day measurements of electric power. Condensers and the measurement of their capacity. 13. Electrolytic deposition of metals. 14. The electric telegraph. 15. Multiple telegraphy. 16. The telephone. 17. The construction of telegraph and telephone lines and instruments. 18. Testing lines for insulation and conductivity and the location of leaks and breaks. 19. Principles of continuous current dynamos and motors. 20. Principles of continuous current dynamos and motors, their construction, care and attendance. 21. Arc lighting and arc light machinery. 22. Incandescent lighting and power transmission, two, three and five wire systems of distribution for electric lights and motors. 23. Construction of electric light and power circuits, and their testing. 24. Testing electric light circuits, and the distribution and measurement of light. 25. Electro-magnetic induction. 26. Alternating currents. 27. Alternating currents and alternating current machinery (concluded). 28. Miscellaneous applications of electric motors. 29. Electric railways. 30. Methods of handling and controlling railway motors and generators. 31. Model electric plants. 32. Underwriters' rules, etc. 33. Electric welding, forging, etc., electrically applied to the kitchen. 34. Electro-therapeutics.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

WILLIAMSPORT, PA.
AN EXTENSIVE AND IMPROVED CREOSOTING WORKS ATTACHED TO THE PLANT.
For underground electrical purposes the conduit produced under this process is the most practical, the most durable and the most economical of any conduit on the market.
This conduit is now being used in the leading cities, and the best of references furnished on application.

The Weston Arc Light Ammeter

Is cheap, but nevertheless reliable

and very accurate.

The scale is so proportioned that a change of 1/10 of one ampere can be seen from a considerable distance. The instrument is absolutely "dead beat." Three different ranges are being made:

No. 1.	5.8	6.8	7.8	amperes in 1/10 ampere div.
No. 2.	8.6	9.6	10.6	" " 1/10 " "
No. 3.	9.5	10.5	11.5	" " 1/10 " "

Alcatraz Electrical Compound,

Manufactured by

THE CALIFORNIA ASPHALT CO., 57 East 59th St., NEW YORK.

ABSOLUTELY UNEQUALED FOR

ELECTRICAL AND WIRE INSULATION, Insulating Connections, Dynamos and Motor Bases, Battery and Accumulator Shelving, Circuit and Switch-Boards.
WATER-PROOFING Cut-Out Boxes, coating wires when subjected to acid or alkaline fumes, and when laid under cement, etc.
PAINTING Poles, Brackets, Cross-Arms, Benches, Floors, etc.
COATING CABLES, Lead-Covered Pipes, and all underground work.

ALCATRAZ ELECTRICAL COMPOUND is manufactured of the celebrated brand of Alcatraz Asphalt, and possesses many well-known points of superiority. It has been tried under severe and exacting conditions, and has given perfect satisfaction. It will not Scale, Crack or Burn. Presents a Smooth Surface. Adheres Tenaciously. Not affected by Thermal or Climatic Conditions. Resists the action of the Elements, Acids, Alkalies, Sewer Gases, and possesses great strength and elasticity. Being the producers of the raw product, we are enabled to save the middleman's profit, and offer consumers a superior article at a very low price. Send for price list.

C. P. WILLIAMS, Sole Agent U. S. A., 39-41 Cortlandt St., New York City.

SIEMENS & HALSKE ELECTRIC COMPANY OF AMERICA,

MANUFACTURERS OF

Direct Current, Multipolar, Slow Speed, External Armature Generators and Motors, especially adapted for Direct Connection.
(Type I.)—In sizes from 20 to 2,000 H. P.
Direct Current, Multipolar, Medium Speed, Internal Armature Generators and Motors adapted for Belting.
(Type A.)—In sizes from 10 to 300 H. P.
Direct Current, Bipolar, Medium Speed, Internal Armature Generators and Motors adapted for Belting.
(Type L. H.)—In sizes from 5 to 130 H. P.
Direct Current Boosters, absolutely controlled by U. S. Patents granted to Siemens & Halske Electric Company.

SIEMENS' BAND ARC LAMPS FOR DIRECT AND ALTERNATING CURRENT, ELECTRIC MINING LOCOMOTIVES, STEAM LOCOMOTIVES, ETC., ETC.

COMPLETE ELECTRIC RAILWAY EQUIPMENTS UNDER SIEMENS' PATENTS:

Siemens' Underrunning Trolleys.

The Siemens Contact Bar is safer than the ordinary trolley, and the overhead construction is less costly. Dr. Ernst Werner von Siemens was the pioneer in Electric Traction. He built his first Electric Railway in 1879. Write for Catalogues and further information to

The Setting Sun

greets the "Pioneer" as his most worthy successor, and when the "Pioneer" is burning it is most difficult to note when the sun has set and his life-long successor begun to supply artificial daylight. Sunlight is a cheap blessing and the "Pioneer" though its chief aim is quality, on the long run is the most economical light yet invented. It burns 150 hours without change of carbons, gives a soft, steady light and is simple and safe.

THE ELECTRIC ARC LIGHT CO.

PIONEERS IN ENCLOSED ARC LIGHTING — THE PIONEER — TRADE MARK

LOUIS B. MARKS, M.M.E.
CHIEF ELECTRICIAN.

687 & 689 Broadway,
NEW YORK.

QUICK BREAK.

REASONS WHY

Our Arc Cut-Outs are the best:

Because they afford the most perfect protection. Because they are fire and moisture proof. Because phosphor-bronze is used for the contacts, etc., which neither corrodes nor crystallizes. Because they are low in price. Try them and be convinced.

We are also manufacturers of all Arc Lighting Supplies.

The Phila. Elec. & Mfg. Co., 20th and Jones Sts., PHILADELPHIA, PA.

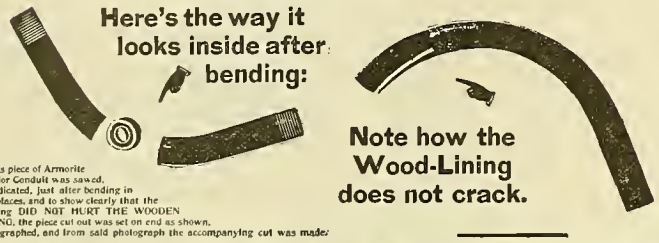
"ARMORITE"!

INTERIOR CONDUIT

(CUMMING'S PATENTS.)

Here's the way it looks inside after bending:



Note how the Wood-Lining does not crack.

This piece of Armorite Interior Conduit was sawed, as indicated, just after bending in two places, and to show clearly that the bending DID NOT HURT THE WOODEN LINING, the piece cut out was set on end as shown, photographed, and from said photograph the accompanying cut was made.

ENCLOSED ARC LAMPS

- - - FOR - - -

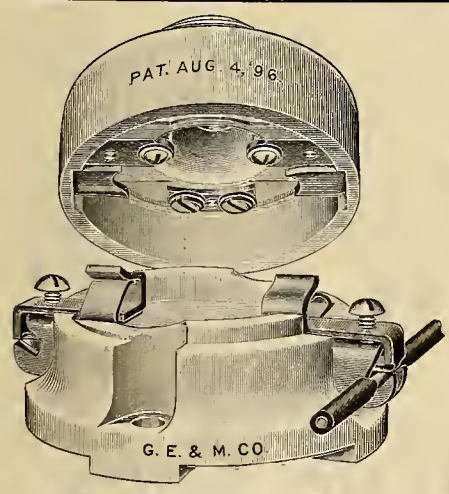
Constant Potential Circuits.

Simple,
Durable,
Economical.

BURN 100 TO 150 HOURS WITH ONE TRIMMING.

Diehl Manufacturing Company, - Elizabethport, N. J.

SHOW ROOMS: 561 Broadway, New York City. 128 Essex Street, Boston.



'96 LEADS.

WHY?

BECAUSE:

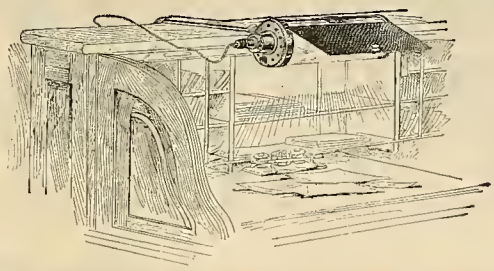
1st—Has perfect contact without marring softest wire.
2nd—Line wire is held by clamp instead of screw points.
3rd—It is easy to take apart; no screw driver, only a quarter turn.
4th—Can use long fuse.
5th—All that use them say so.

Write for Prices on Fuse Blocks, Etc.

GILMORE ELEC. & MFG. CO., North Easton, Mass.

BEWARE OF SPURIOUS IMITATIONS OF THE

Kinsman DESK LIGHT.



Invented by
WALTER R. KINSMAN.

See that the Eye Shade is Adjustable, so that an illumination of the room, as well as of the desk, can be obtained if desired.

See that Any Standard Lamp may be Used, as it is not only expensive, but difficult, to procure special shaped lamps.

See that you get the Kinsman Desk Light. Manufactured only by - - - -

NEW EDITION.
X-RAYS
FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 93 Pages. 47 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

It Helps Mechanics

Lord's Power and Machinery Magazine
(Published Monthly)

tells all about the thousand and one things every mechanic and engineer ought to know. It tells about those things that every good mechanic **must** know. It goes into details. It is practical, full of hints, and helps its readers to become skilled and expert workmen. The more a man knows about his profession, the more salary he will command. The small price it costs to subscribe (**$1 a year**) will come back many times over in increased salary. Sample copy sent for **10 cents.** Write your name and address on a postal card, and mail it to

MADISON, WIS.

P. L. SPOONER, President. E. W. BATCHELDER, Secretary.
H. C. DODGE, General Superintendent. H. A. TAYLOR, Treasurer.

Manufacturers of reliable, time tried and tested Telephone Apparatus. Irrespective of price the best. Trial proves it. We have received thousands of unsolicited testimonials and have equipped over 150 dividend-paying exchanges.

A TIMELY HINT: Buy Telephones and Appliances from manufacturers whose guarantee of protection is a practical certification that your interests will be ably taken care of. "A Word to the Wise," etc.

Up-to-date instruments furnished to meet all requirements of service.

Standard Telephones and Switchboards are leaders. Why? Because efficiency of operation, best materials, finest workmanship and careful attention to details recommend their adoption by experts. Correspondence solicited.

HENNEY BUGGY CO.,

CHICAGO, ILL.

Special Offer. 60 Days Only.

To test the merit of this paper cut out this advertisement and send to us, and we will send to you F. O. B., Chicago,

Full Leather Top End Spring Buggy,

Spring Back and Cushion, Leather Covered Bows, Well Painted and Trimmed with 16 oz. All Wool Cloth, for

$50.00, worth $100.00.

GENUINE RUBBER TRIMMED BUGGY HARNESS,

With Gilt Oreide Hooks and Terrets and Shaft Tug Buckles. Full Kay Track Saddle, very handsome, for **$15.00** worth **$35.00.**

C. G. BIRD, Manager,

377 and 379 Wabash Ave., - - - CHICAGO, ILL.

The Electric Railway of To-day,

BY H. B. PRINDLE.

60 PAGES, PROFUSELY ILLUSTRATED.

PRICE REDUCED TO 25 CENTS.

The author describes the ELECTRIC RAILWAY SYSTEM in a popular manner, using such language that the reader who is unfamiliar with technical terms can readily understand the construction of the apparatus and the functions of various appliances used in the electrical propulsion of street cars.

It contains a vast amount of useful and valuable information for every motorman and those interested generally in Electric Railway work and improvement.

PRICE 25 CENTS.

POSTAGE FREE.

"THERE ARE OTHERS."

Only one telephone ever put out by this company was estopped from the use it was intended for, by patent suits, and that one was purchased by a Bell Company spy for litigation. We shall be pleased to sell the Bell Company, or others, additional telephones at the same prices and terms.

During this company's history a great number of patents have expired which the Bell people and unscrupulous competitors "bragged" were going to be used to estop our patrons.

The Watson patent victory for us has staggered the Bell people and brought to us favorable letters and congratulations from not only our own patrons but from competitors generally, except in one or two instances where envious "cheap" competitors attempt, by misrepresentation, to usurp part of the glory. The victory was ours completely and alone.

We now beg to assure our customers that no matter what the result of the Government case on the Berliner patent now in the Supreme Court, this company can, with less difficulty than it experienced in defeating the Watson patent, DEFEAT THE BERLINER PATENT.

BUY your apparatus of a company which has ample facilities for determining patent questions.

DEAL with a company known to be reliable from experience.

DON'T waste your money upon cheap and out-of-date apparatus, but obtain thoroughly first-class

SWITCHBOARDS AND TELEPHONES

From the largest manufacturer thereof, exclusively, in the United States.

WESTERN TELEPHONE CONSTRUCTION CO., 250 S. CLINTON ST., CHICAGO, ILL.

NOTE.—The U. S. Patent Office officials found upon examination that we offered the only apparatus free from patent Infringement. The public will learn this more fully in time.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

Published and for sale by ELECTRICIAN PUBLISHING CO.; Suite 510 Marquette Building, CHICAGO.

We are making the very best Carbons now on the market, and selling them at prices that you cannot afford to remain unaware of. Operating as we do the largest factory outside of the "Trust," with a daily capacity of 150,000 carbons, the prompt execution of large orders is assured.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

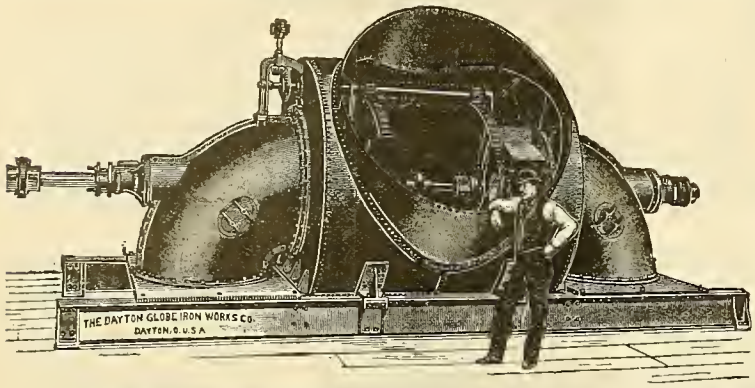
WESTERN ELECTRICIAN Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been FOUND that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the NORTH POLE.



PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

	Head.	Rev. per Min.	Cu. Ft. per Sec.	H. P.	Per Cent.

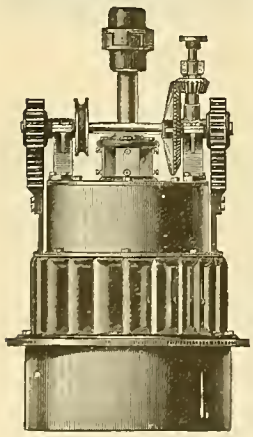
ELECTRICIAN PUBLISHING CO., Suite 510 Marquette Bldg., CHICAGO.



THE McCORMICK TURBINE,

On Vertical or Horizontal Shaft, Especially Adapted for Electric Work.

Gives more power per dinmeter with a higher percentage of useful effect than any other water-wheel heretofore made. All sizes, right and left hand, are built from patterns perfected under systematic tests in the Holyoke Testing Flume.

Parties having power plants which are unsatisfactory, and those contemplating the improvement of powers, will find it to their interest to confer with me, **as I am willing to guarantee results where others have failed, no matter what make of turbine has been in use. STATE REQUIREMENTS AND SEND FOR CATALOGUE.**

S. MORGAN SMITH, York, Pa.

Estimates furnished for complete power plants and results guaranteed

WATER WHEEL

150 Styles and Sizes. Upright and Horizontal.

33 YEARS' BUSINESS

affords every facility for adapting them to

MILLING, MINING, ELECTRIC,

and manufacturing purposes. Easy working balanced gate, and fine regulation. We guarantee highest power, with smallest quantity of water, at full and part gates. Successfully operating under heads of 2 to 300 feet. Write us for fine pamphlet and state your wants.

AUTOMATIC CIRCUIT BREAKER COMPANY, NEWAYGO, MICH., U. S. A.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

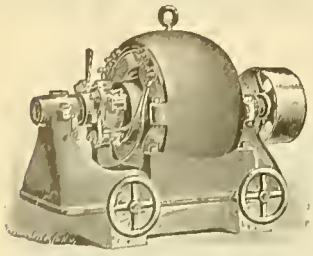
AMERICAN-BALL ENGINE.



The result of twenty-five years' experience with four thousand engines, designed and built by Mr. Frank H. Ball.

The latest development in practical steam engineering. New features, improved design and finish, but the same old valve that has saved thousands of tons of coal in the last quarter of a century, and is the only form of valve used in single valve automatics, that follows its own wear, and never leaks.

We also build a full line of multipolar dynamos and motors, and our new six-pole generators are adapted to our **American-Ball Engine,** making complete and symmetrical generating units

AMERICAN ENGINE CO., Bound Brook, N. J.

The Holidays are Coming.

Why not make a present of an electrical book to those you desire to remember at Christmas or New Year's? Useful presents are most appreciated. Note the following:

NEW DYNAMO TENDERS' HAND-BOOK.—By Lieut. F. B. Badt. One hundred and forty illustrations. Price $1.00. An entirely new and up-to-date work, 226 pages, flexible cloth binding, size of page 5¾ by 3½ inches. Designed for dynamo tenders, linemen, stationary and marine engineers. Just the book for men who wish to learn how to operate and care for electric light installations. The only book of the kind in the English language.

BELL HANGERS' HAND-BOOK.—By Lieut. F. B. Badt. Third Edition. Eighth Thousand. One hundred and six pages, 97 illustrations. Just the book for those engaged in selling, installing or handling Electric Batteries, Electric Bells, Elevator, House or Hotel Annunciators, Burglar or Fire Alarms, Electric Gas Lighting Apparatus, Electric Heat Regulating Apparatus, etc. The only book of its kind. Simple as A, B, C. Price $1.00.

ELECTRIC TRANSMISSION HAND-BOOK.—By Lieut. F. B. Badt. First Edition. Three Thousand Copies. Ninety-seven pages, twenty-two illustrations, twenty-seven original tables. Gives more practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers, and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants. A practical and reliable work. Price $1.00.

INCANDESCENT WIRING HAND-BOOK.—By Lieut. F. B. Badt. Profusely illustrated. Price $1.00. Type page 5½ by 3 inches; flexible cloth binding, sixty-six pages, thirty-five cuts and five tables, three of which are 12 by 18 inches. These tables give at once, and without any calculation, the size of wire required in each case for any percentage of loss. A timely book, containing full instructions for Incandescent Wiring, and complete information concerning Methods of Running Wires, Location of Safety Devices and Switches, Splices, Insulation and Testing for Faults, Wire Gauges, General Electrical Data, Calculating Size of Wires, Wiring of Fixtures, Elevators, Buildings, Isolated and Central Station Plants. The only complete book of the kind published.

DERIVATION OF PRACTICAL ELECTRICAL UNITS.—By Lieut. F. B. Badt and Prof. H. S. Carhart. Price, postage prepaid, 75 cents. This is a very handsome book of sixty pages, printed on fine, heavy paper, with neat cloth binding. It contains Portraits and Biographies of Ohm, Watt, Faraday, Joule, Gauss, Weber, Sir William Siemens, Dr. Werner von Siemens, Volta, Ampere, Daniell and von Jacobi, together with a carefully prepared table of Practical Electrical Units, with their relative values. In no other single volume can this rare collection of portraits be found.

THE TELEPHONE HAND-BOOK.—By Herbert Laws Webb. One hundred and forty-six pages, 138 illustrations, cloth, hand-book size, price $1.00. Extract from Preface: "This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the Telephone Hand-Book is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country." No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-books which have been so favorably received by the entire electrical fraternity.

THE BOOK YOU WANT.

DESMOND, CHAS.—Electricity for Engineers. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Alternate Current Apparats. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised Edition, 12mo, cloth, Chicago, 1893. $2.50.

BUCKLEY, W. J.—Electric Lighting Plants, their cost and operation. Two hundred and seventy-five pages, many illustrations and diagrams, cloth, 1894, $2.00; paper $1.00. The purpose of this work is to give to intending purchasers of lighting plants such details as may aid them in forming a fair estimate of the cost of construction and operation of a proposed plant. Data compiled from station reports of electric lighting plants employing overhead circuits, with suggestions pertaining to the information usually desired by the non-technical purchaser.

CROSBY, O. T., AND DR. LOUIS BELL.—The Electric Railway in Theory and Practice. A complete treatise on the construction and operation of electric railways. Second Edition, revised and enlarged. One hundred and eighty-three illustrations, 8vo, cloth, New York, 1892, $2.50. In this work will be found a full discussion of the principles, apparatus and methods of construction employed in electric railroading. The treatment of the subject is thoroughly practical, and will recommend itself alike to the electrical engineer, the student and the electric railway manager.

LOCKWOOD.—Electricity, Magnetism and Electric Telegraphy. A practical guide and hand-book of general information for electrical students, operators and inspectors. Three hundred and seventy-six pages, 152 illustrations, $2.50.

THOMPSON.—Dynamo-Electric Machinery. A text-book for students of electro-technics. Fourth Edition. Rewritten and revised. About 1,000 pages, fully illustrated, 39 plates. $6.00.

A DICTIONARY OF ELECTRIC WORDS, TERMS AND PHRASES.—By Prof. E. J. Houston. Third Edition, Revised and Enlarged. One volume, octavo, 750 pages, illustrated, cloth. Price $5.00. The new edition contains over 5,000 terms and 75 new illustrations. Concise definitions of electrical terms in general use, illustrated descriptions of electrical apparatus, and clear explanations of electrical phenomena. A work needed in every scientific library and an invaluable reference book to both students and professional men. One of the features of the dictionary is that it is not a mere word-book. The words, terms and phrases are invariably followed by a short, concise definition, giving the sense in which they are correctly employed.

ELECTRICITY AND MAGNETISM.—A series of thirty-four lessons, covering the science of electricity from its fundamental principles to its everyday practical application. Comprises 34 lessons, 325 pages, over 300 diagrams and illustrations. $2.00. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony of New York; Prof. Brown Ayres, Tulane University, New Orleans; Prof. A. C. Perrine, Leland Stanford University, California; Prof. Geo. D. Shepardson, University of Minnesota, and others. A comprehensive treatise in simple language, free from algebraic equations and easily understood. Table of Contents: 1. The nature and properties of electricity. 2. Machines for generating electricity by friction and by electric induction. 3. Electric batteries or appliances for generating electricity by chemical action. 4. Electric batteries, or appliances for generating electricity by chemical action (concluded). 5. The nature and properties of magnetism, magnetic fields. 6. The magnetic effects of electric currents, and magnetic circuits. 7. Ohm's law of the flow of electricity. 8. Heating effects of electric currents. Miscellaneous effects of electric currents. 9. Galvanometers and voltameters. 10. Measurement of electrical resistance. 11. Every-day measurements of electric currents and pressures. 12. Every-day measurements of electric power. Condensers and the measurement of their capacity. 13. Electrolytic deposition of metals. 14. The electric telegraph. 15. Multiple telegraphy. 16. The telephone. 17. The construction of telegraph and telephone lines and instruments. 18. Testing lines for insulation and conductivity and the location of leaks and breaks. 19. Principles of continuous current dynamos and motors. 20. Principles of continuous current dynamos and motors, their construction, care and attendance. 21. Arc lighting and arc light machinery. 22. Incandescent lighting and power transmission, two, three and five wire systems of distribution for electric light and motors. 23. Construction of electric light and power circuits, and their testing. 24. Testing electric light circuits, and the distribution and measurement of light. 25. Electro-magnetic induction. 26. Alternating currents. 27. Alternating currents and alternating current machinery (concluded). 28. Miscellaneous applications of electric motors. 29. Electric railways. 30. Methods of handling and controlling railway motors and generators. 31. Model electric plants. 32. Underwriters' rules, etc. 33. Electric welding, forging, etc., electricity applied to the kitchen. 34. Electro-therapeutics.

PAINTING Poles, Brackets, Cross-Arms, Benches, Floors, etc.

COATING CABLES, Lead-Covered Pipes, and all underground work.

ALCATRAZ ELECTRICAL COMPOUND is manufactured of the celebrated brand of Alcatraz Asphalt, and possesses many well-known points of superiority. It has been tried under severe and exacting conditions, and has given perfect satisfaction. **It will not Scale, Crack or Burn. Presents a Smooth Surface. Adheres Tenaciously. Not affected by Thermal or Climatic Conditions. Resists the action of the Elements, Acids, Alkalies, Sewer Gases, and possesses great strength and elasticity.** Being the producers of the raw product, we are enabled to save the middleman's profit, and offer consumers a superior article at a very low price. **Send for price list.**

C. P. WILLIAMS, Sole Agent U. S. A., 39-41 Cortlandt St., New York City.

NEW EDITION.
X-RAYS
FOR EVERYBODY.
By Edward Trevert.

Just off the Press. 93 Pages. 47 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

"BRIDGING" BELLS!
REWARD!

The undersigned will pay rewards for proof of use prior to August, 1888, of bridging bells in telephones of the so-called "Carty" style. A reward of $50 will be paid for the first information and proof; a reward of $25 for the second; $25 third and $10 fourth. Informants should give as fully as possible proof as follows:

Place bridging bells were used.
Resistance of ringer magnets.
Method drawing) of circuit connections.
Name of manufacturer.
Name of user.
Month and year (and day of month, if certain) seen in use.
Names of as many persons who can testify to same as possible.
Names of informants will be kept secret, unless they are willing to be known.

A further reward of $100 will be given for sufficient information to prove, and of $100 additional for proof positive that the "Carty Bridging Bells" were manufactured by the Western Electric Co. prior to August 16, 1888.

All communications should be addressed to undersigned.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Naumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.

PRACTICAL Guide for Firemen,

By W. H. WAKEMAN.
Price 75 Cents.
80 pages, 14 illustrations, bound in cloth.

An elementary treatise relating to the care and management of Steam Boilers, Pumps, Injectors, etc., and Steam Plants generally. Containing complete instructions, and many valuable suggestions for the safe, practical, and economical management of the Steam Plant.

Especially intended for those who seek promotion, and aspire to be something more than a "Coal hustler," and for the benefit of Firemen and Engineers who do not "know it all" and who are willing to profit by the suggestions, etc., of "one who has been there."

In writing this book it has been the aim of the author to give the duties of the fireman, or the one in charge of a steam plant, in as simple and concise a manner as the subject and the English language will admit of; and to furnish all the information required to enable them to take charge of and operate a steam plant successfully and economically.

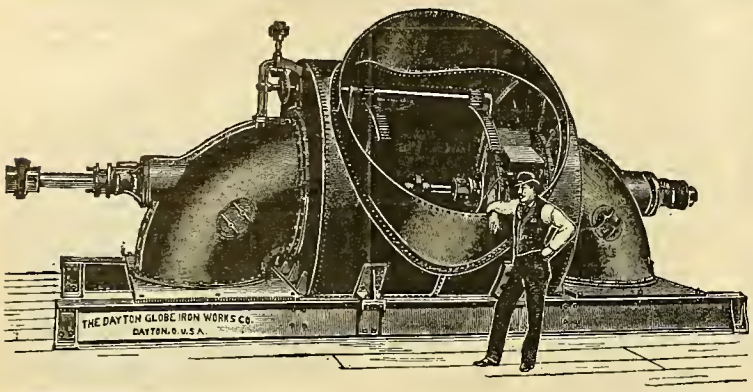
WESTERN ELECTRICIAN

Contains more news for the busy reader than can be found in any other journal devoted to electricity. Although large claims of superiority have been made by our contemporaries, it has been **FOUND** that the Western Electrician is far above the other papers in the matter of news, as is evidenced by the following testimonial: "Although I have taken every electrical journal, there is none I like so well as the Western Electrician." This is the reason the Western Electrician has so large a circulation, even if it was not found at the **NORTH POLE.**



PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

Whether you are contemplating the erection of an entire new Heating Plant, or simply wish to rejuvenate an existing one, it will well repay you to investigate the

Webster System of Steam Heating.

The broad, general claim that it is the most effective one extant is clearly demonstrated in a plain, straightforward little booklet—not a "long-winded," abstruse treatise—which booklet it will afford us pleasure to hand you by mail.

The *Webster System* is absolutely unique in many of its features, among which, moreover, low cost looms up conspicuously.

Would you like a copy of this booklet?

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnacee and steel converters. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

DOMESTIC Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and workshops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.
The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

A BATTERY OF CHLORIDE ACCUMULATORS IN AN OFFICE BUILDING operating electric elevators acts as a regulator of potential, allowing the lamp and elevator services to be taken from one generator, which is run at normal, steady load. The battery furnishes the night service at a minimum cost; it increases the reliability of the system, as it will supply any sudden heavy demand for current in excess of the capacity of the generator; it will carry the entire load temporarily in case of a breakdown of engine or dynamo; it will save coal, labor, depreciation.

A storage battery fills a place no other electrical apparatus can occupy.

The Holidays are Coming.

Why not make a present of an electrical book to those you desire to remember at Christmas or New Year's? Useful presents are most appreciated. Note the following:

NEW DYNAMO TENDERS' HAND-BOOK.—By Lieut. F. B. Badt. One hundred and forty illustrations. Price $1.00. An entirely new and up-to-date work, 226 pages, flexible cloth binding, size of page 5¾ by 3½ inches. Designed for dynamo tenders, linemen, stationary and marine engineers. Just the book for men who wish to learn how to operate and care for electric light installations. The only book of the kind in the English language.

BELL HANGERS' HAND-BOOK.—By Lieut. F. B. Badt. Third Edition. Eighth Thousand. One hundred and six pages, 97 illustrations. Just the book for those engaged in selling, installing or handling Electric Batteries, Electric Bells, Elevator, House or Hotel Annunciators, Burglar or Fire Alarms, Electric Gas Lighting Apparatus, Electric Heat Regulating Apparatus, etc. The only book of its kind. Simple as A, B, C. Price $1.00.

ELECTRIC TRANSMISSION HAND-BOOK.—By Lieut. F. B. Badt. First Edition. Three Thousand Copies. Ninety-seven pages, twenty-two illustrations, twenty-seven original tables. Gives more practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers, and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants. A practical and reliable work. Price $1.00.

INCANDESCENT WIRING HAND-BOOK.—By Lieut. F. B. Badt. Profusely illustrated. Price $1.00. Type page 5½ by 3 inches; flexible cloth binding, sixty-six pages, thirty-five cuts and five tables, three of which are 12 by 18 inches. These tables give at once, and without any calculation, the size of wire required in each case for any percentage of loss. A timely book, containing full instructions for Incandescent Wiring, and complete information concerning Methods of Running Wires, Location of Safety Devices and Switches, Splices, Insulation and Testing for Faults, Wire Gauges, General Electrical Data, Calculating Size of Wires, Wiring of Fixtures, Elevators, Buildings, Isolated and Central Station Plants. The only complete book of the kind published.

DERIVATION OF PRACTICAL ELECTRICAL UNITS.—By Lieut. F. B. Badt and Prof. H. S. Carhart. Price, postage prepaid, 75 cents. This is a very handsome book of sixty pages, printed on fine, heavy paper, with neat cloth binding. It contains Portraits and Biographies of Ohm, Watt, Faraday, Joule, Gauss, Weber, Sir William Siemens, Dr. Werner von Siemens, Volta, Ampere, Daniell and von Jacobi, together with a carefully prepared table of Practical Electrical Units, with their relative values. In no other single volume can this rare collection of portraits be found.

THE TELEPHONE HAND-BOOK.—By Herbert Laws Webb. One hundred and forty-six pages, 138 illustrations, cloth, hand-book size, price $1.00. Extract from Preface: "This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and mansgement, and the Telephone Hand-Book is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country." No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-books which have been so favorably received by the entire electrical fraternity.

THE BOOK YOU WANT.

DESMOND, CHAS.—Electricity for Engineers. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Alternate Current Apparats. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised Edition, 12mo, cloth, Chicago, 1893. $2.50.

BUCKLEY, W. J.—Electric Lighting Plants, their cost and operation. Two hundred and seventy-five pages, many illustrations and diagrams, cloth, 1894, $2.00; paper $1.00. The purpose of this work is to give to intending purchasers of lighting plants such details as may aid them in forming a fair estimate of the cost of construction and operation of a proposed plant. Data compiled from station reports of electric lighting plants employing overhead circuits, with suggestions pertaining to the information usually desired by the non-technical purchaser.

CROSBY, O. T., AND DR. LOUIS BELL.—The Electric Railway in Theory and Practice. A complete treatise on the construction and operation of electric railways. Second Edition, revised and enlarged. One hundred and eighty-three illustrations, 8vo, cloth, New York, 1892, $2.50. In this work will be found a full discussion of the principles, apparatus and methods of construction employed in electric railroading. The treatment of the subject is thoroughly practical, and will recommend itself alike to the electrical engineer, the student and the electric railway manager.

LOCKWOOD.—Electricity, Magnetism and Electric Telegraphy. A practical guide and hand-book of general information for electrical students, operators and inspectors. Three hundred and seventy-six pages, 152 illustrations, $2.50.

THOMPSON.—Dynamo-Electric Machinery. A text-book for students of electro-technics. Fourth Edition, Rewritten and revised. About 1,000 pages, fully illustrated, 89 plates. $6.00.

A DICTIONARY OF ELECTRIC WORDS, TERMS AND PHRASES.—By Prof. E. J. Houston. Third Edition, Revised and Enlarged. One volume, octavo, 750 pages, illustrated, cloth. Price $5.00. The new edition contains over 5,000 terms and 75 new illustrations. Concise definitions of electrical terms in general use, illustrated descriptions of electrical apparatus, and clear explanations of electrical phenomena. A work needed in every scientific library and an invaluable reference book to both students and professional men. One of the features of the dictionary is that it is not a mere word-book. The words, terms and phrases are invariably followed by a short, concise definition, giving the sense in which they are correctly employed.

DYNAMOS, ALTERNATORS AND TRANSFORMERS, by Gisbert Kapp, M. Inst. C. E., M. Inst. E. E. Recently published. 12mo, cloth, 493 pp., 138 illustrations. Price $4.

The book gives an exposition of the general principles underlying the construction of Dynamo-Electric Apparatus without the use of high mathematics and complicated methods of investigation, thus enabling the average engineering student and the average electrical engineer, even without previous knowledge, to easily follow the subject.

CHAPTER I.—Definition. Efficiency of Dynamo-Electric Apparatus. Measurement of Electric Energy. Principal Parts of Dynamo. Distinction between Dynamo and Alternator. Use and Power of these Machines. CHAPTER II.—Scope of Theory. The Magnetic Field. Strength of Field. Units of Measurement. Physical and Mathematical Magnets. Fields of a Mathematical Pole. CHAPTER III.—Magnetic Moment. Measuring Weak Magnetic Fields. Attractive Force of Magnets. Practical Examples. CHAPTER IV.—Action of Current upon Magnet. Field of a Current. Unit Current. Mechanical Force between Current and Magnet. Practical Examples. English System of Measurement. CHAPTER V.—The Electromagnet. The Solenoid. Magnetic Permeability. Magnetic Force. Line Integral of Magnetic Force. Total Field. Practical Example. Extension of Theory to Solenoidal Electromagnets. Magnetic Resistance. CHAPTER VI.—Magnetic Properties of Iron. Experimental Determination of Permeability. Hopkinson's Method. Energy of Magnetization. Hysteresis. CHAPTER VII.—Induced Electromotive Force. Cutting or Threading of Lines. Value of Induced Electromotive Force. C. G. S. Unit of Resistance. Fleming's Rule. Electromotive Force of Two-Pole Armature. CHAPTER VIII.—Electromotive Force of Armature. Closed-Coil Armature. Winding. Bi-Polar Winding. Multipolar Parallel Winding. Multipolar Series Winding. Multipolar Series and Parallel Winding. CHAPTER IX.—Open-Coil Armatures. The Brush Armature. The Thomson-Houston Armature. CHAPTER X. Field Magnets. Two-Pole Fields. Multipolar Fields. Weight of Fields. Determination of Exciting Power. Predetermination of Characteristics. CHAPTER XI.—Static and Dynamic Electromotive Force. Commutation of Current. Armature Back Ampere-Turns. Dynamic Characteristic. Armature Cross Ampere-Turns. Sparkless Collection. For Contents of Chapters XII-XVIII see our new book catalogue.

Above books, or any other electrical works published, sent prepaid on receipt of price. Address

ELECTRICIAN PUBLISHING CO., 510 Marquette Building, CHICAGO.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a New Book, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 6½x3 inches, flexible cloth binding, 68 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 6½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.60

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors, How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.50

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 600 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current Induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised ..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly
THE FERRIS WHEEL CO.
By L. V. Rice. Mgr.

Alcatraz Electrical Compound,

Manufactured by

THE CALIFORNIA ASPHALT CO., 57 East 59th St., NEW YORK.

ABSOLUTELY UNEQUALED FOR

ELECTRICAL AND WIRE INSULATION, Insulating Connections, Dynamos and Motor Bases, Battery and Accumulator Shelving, Circuit and Switch-Boards.
WATER-PROOFING Cut-Out Boxes, coating wires when subjected to acid or alkaline fumes, and when laid under cement, etc.
PAINTING Poles, Brackets, Cross-Arms, Benches, Floors, etc.
COATING CABLES, Lead-Covered Pipes, and all underground work.

ALCATRAZ ELECTRICAL COMPOUND is manufactured of the celebrated brand of Alcatraz Asphalt, and possesses many well-known points of superiority. It has been tried under severe and exacting conditions, and has given perfect satisfaction. **It will not Scale, Crack or Burn. Presents a Smooth Surface. Adheres Tenaciously. Not affected by Thermal or Climatic Conditions. Resists the action of the Elements, Acids, Alkalies, Sewer Gases, and possesses great strength and elasticity.** Being the producers of the raw product, we are enabled to save the middleman's profit, and offer consumers a superior article at a very low price.

SAMPLE UPON APPLICATION. **C. P. WILLIAMS,** Sole Agent U. S. A. **39-41 Cortlandt St., New York City.**

'96 LEADS.

WHY?

BECAUSE:

1st—Has perfect contact without marring softest wire.
2nd—Line wire is held by clamp instead of screw points.
3rd—It is easy to take apart; no screw driver, only a quarter turn.
4th—Can use long fuse.
5th—All that use them say so.

Write for Prices on Fuse Blocks, Etc.

OFFICE OF
The O. C. White Company,
WORCESTER, MASS.

Adjustable Holders for Incandescent Lamps.

K. McLENNAN & Co., Chicago, Ill. DECEMBER 5, 1896.

Gentlemen:—The sample of "Gale's Commutator Compound," which you sent us some days ago, we have given a careful trial and we are much pleased with the results. It does absolutely all that you claim for it, entirely doing away with sparks and giving the commutator a clean, hard, polished appearance. We shall certainly continue the use of this "dynamo necessity."

Very truly yours,
THE O. C. WHITE CO.
Per O. C. White, Jr.

EUGENE F. PHILLIPS, Prest. W. A. HATHAWAY, Treas. W. H. SAWYER, Secy.

No. 11 DOUBLE GROOVE PONY INSULATOR

HIGH INSULATION.

The most perfect Glass Insulator made is the Teat Insulator.

"The Teats on the lower rim of the petticoat attract the water on the outer and inner surfaces of the Insulator into drops. The water drops from these points onto the cross arm, thereby preventing the moisture from creeping to the pin."

HEMINGRAY GLASS CO., Covington, Ky.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Circuit in Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines; The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

DYNAMO-ELECTRIC MACHINE DESIGN TAUGHT BY MAIL.

The *Mechanical-Electrical Scholarship* is a thorough course of instruction for persons who wish to obtain such technical education as will qualify them to design electrical machinery and to become Electrical Engineers.

Studies are carried on at home. Specially prepared Instruction and Question Papers take the place of text-books. Instructors direct the student and assist him in his studies. Mechanical Drawing is successfully taught by a new method.

For those who wish to study the operation and installation of electric light, power and railway plants, the Electrical Power and Lighting Scholarship is designed.

We also have courses in Steam Engineering; Civil Engineering in all its branches; Book-Keeping and Business Forms and the English Branches.

Mention the subject in which you are interested and send for our Free Circular which contains full particulars. Address

THE INTERNATIONAL CORRESPONDENCE SCHOOLS,
Box 1002, SCRANTON, PA.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castinge of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castinge. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel converters. Its fluidity and cleansing properties to metals, aside from its strengtheniog qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

The Painter-Morrison Push Button Flush Switch.

PATENTED DECEMBER 22, 1891.

This Switch is absolutely the only Flush Switch on the market combining simplicity of construction with perfection of mechanism.
They are entirely fire and damp proof, sides and base being porcelain.
They can be wired without taking apart, saving time and labor.
The finishing plate can be made to harmonize with other decorations of the room, and need not be put on till all other work is done.
They are positively non-arcing.
They can be placed in groups and are easily accessible in all their parts.
The buttons indicate by the touch whether on or off.
They are finished with brass, nickel or copper face plates, and all parts are interchangeable.
The Switch is 10 ampere, Double Pole.
Price $2.00. A small extra charge for any special finish desired.

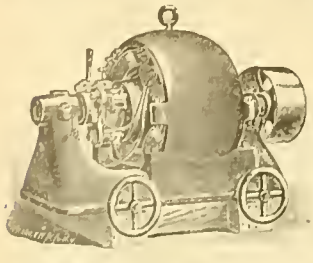
AMERICAN-BALL ENGINE.



The result of twenty-five years' experience with four thousand engines, designed and built by Mr. Frank H. Ball.

The latest development in practical steam engineering. New features, improved design and finish, but the same old valve that has saved thousands of tons of coal in the last quarter of a century, and is the only form of valve used in single valve automatics, that follows its own wear, and never leaks.

We also build a full line of multipolar dynamos and motors, and our new six-pole generators are adapted to our **American-Ball Engine,** making complete and symmetrical generating units

The Holidays are Coming.

Why not make a present of an electrical book to those you desire to remember at Christmas or New Year's? Useful presents are most appreciated. Note the following:

NEW DYNAMO TENDERS' HAND-BOOK.—By Lieut. F. B. Badt. One hundred and forty illustrations. Price $1.00. An entirely new and up-to-date work, 226 pages, flexible cloth binding, size of page 5¾ by 3½ inches. Designed for dynamo tenders, linemen, stationary and marine engineers. Just the book for men who wish to learn how to operate and care for electric light installations. The only book of the kind in the English language.

BELL HANGERS' HAND-BOOK.—By Lieut. F. B. Badt. Third Edition. Eighth Thousand. One hundred and six pages, 97 illustrations. Just the book for those engaged in selling, installing or handling Electric Batteries, Electric Bells, Elevator, House or Hotel Annunciators, Burglar or Fire Alarms, Electric Gas Lighting Apparatus, Electric Heat Regulating Apparatus, etc. The only book of its kind. Simple as A, B, C. Price $1.00.

ELECTRIC TRANSMISSION HAND-BOOK.—By Lieut. F. B. Badt. First Edition. Three Thousand Copies. Ninety-seven pages, twenty-two illustrations, twenty-seven original tables. Gives more practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers, and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants. A practical and reliable work. Price $1.00.

INCANDESCENT WIRING HAND-BOOK.—By Lieut. F. B. Badt. Profusely Illustrated. Price $1.00. Type page 5½ by 3 inches; flexible cloth binding, sixty-six pages, thirty-five cuts and five tables, three of which are 12 by 18 inches. These tables give at once, and without any calculation, the size of wire required in each case for any percentage of loss. A timely book, containing full instructions for Incandescent Wiring, and complete information concerning Methods of Running Wires, Location of Safety Devices and Switches, Splices, Insulation and Testing for Faults, Wire Gauges, General Electrical Data, Calculating Size of Wires, Wiring of Fixtures, Elevators, Buildings, Isolated and Central Station Plants. The only complete book of the kind published.

DERIVATION OF PRACTICAL ELECTRICAL UNITS.—By Lieut. F. B. Badt and Prof. H. S. Carhart. Price, postage prepaid, 75 cents. This is a very handsome book of sixty pages, printed on fine, heavy paper, with neat cloth binding. It contains Portraits and Biographies of Ohm, Watt, Faraday, Joule, Gauss, Weber, Sir William Siemens, Dr. Werner von Siemens, Volta, Ampere, Daniell and von Jacobi, together with a carefully prepared table of Practical Electrical Units, with their relative values. In no other single volume can this rare collection of portraits be found.

THE TELEPHONE HAND-BOOK.—By Herbert Laws Webb. One hundred and forty-six pages, 138 illustrations, cloth, hand-book size, price $1.00. Extract from Preface: "This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the Telephone Hand-Book is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmittera and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country." No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-books which have been so favorably received by the entire electrical fraternity.

THE BOOK YOU WANT.

DESMOND, CHAS.—Electricity for Engineers. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Alternate Current Apparats. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised Edition, 12mo, cloth, Chicago, 1893. $2.50.

BUCKLEY, W. J.—Electric Lighting Plants, their cost and operation. Two hundred and seventy-five pages, many illustrations and diagrams, cloth, 1894, $2.00; paper $1.00. The purpose of this work is to give to intending purchasers of lighting plants such details as may aid them in forming a fair estimate of the cost of construction and operation of a proposed plant. Data compiled from station reports of electric lighting plants employing overhead circuits, with suggestions pertaining to the information usually desired by the non-technical purchaser.

CROSBY, O. T., AND DR. LOUIS BELL.—The Electric Railway in Theory and Practice. A complete treatise on the construction and operation of electric railways. Second Edition, revised and enlarged. One hundred and eighty-three illustrations, 8vo, cloth, New York, 1892, $2.50. In this work will be found a full discussion of the principles, apparatus and methods of construction employed in electric railroading. The treatment of the subject is thoroughly practical, and will recommend itself alike to the electrical engineer, the student and the electric railway manager.

LOCKWOOD.—Electricity, Magnetism and Electric Telegraphy. A practical guide and hand-book of general information for electrical students, operators and inspectors. Three hundred and seventy-six pages, 152 illustrations, $2.50.

THOMPSON.—Dynamo-Electric Machinery. A text-book for students of electro-technics. Fourth Edition. Rewritten and revised. About 1,000 pages, fully illustrated, 39 plates. $6.00.

A DICTIONARY OF ELECTRIC WORDS, TERMS AND PHRASES.—By Prof. E. J. Houston. Third Edition, Revised and Enlarged. One volume, octavo, 750 pages, illustrated, cloth. Price $5.00. The new edition contains over 5,000 terms and 75 new illustrations. Concise definitions of electrical terms in general use, illustrated descriptions of electrical apparatus, and clear explanations of electrical phenomena. A work needed in every scientific library and an invaluable reference book to both students and professional men. One of the features of the dictionary is that it is not a mere word-book. The words, terms and phrases are invariably followed by a short, concise definition, giving the sense in which they are correctly employed.

DYNAMOS, ALTERNATORS AND TRANSFORMERS, by Gisbert Kapp, M. Inst. C. E., M. Inst. E. E. Recently published. 12mo, cloth, 493 pp., 138 illustrations. Price $4.

The book gives an exposition of the general principles underlying the construction of Dynamo-Electric Apparatus without the use of high mathematics and complicated methods of investigation, thus enabling the average engineering student and the average electrical engineer, even without previous knowledge, to easily follow the subject.

CHAPTER I.—Definition. Efficiency of Dynamo-Electric Apparatus. Measurement of Electric Energy. Principal Parts of Dynamo. Distinction between Dynamo and Alternator. Use and Power of these Machines. CHAPTER II.—Scope of Theory. The Magnetic Field. Strength of Field. Units of Measurement. Physical and Mathematical Magnets. Fields of a Mathematical Pole. CHAPTER III.—Magnetic Moment. Measuring Weak Magnetic Fields. Attractive Force of Magnets. Practical Examples. CHAPTER IV.—Action of Current upon Magnet. Field of a Current. Unit Current. Mechanical Force between Current and Maguet. Practical Exsmples. English System of Measurement. CHAPTER V.—The Electromsgnet. The Solenoid. Magnetic Permeability. Magnetic Force. Line Integral of Magnetic Force. Total Field. Practical Example. Extension of Theory to Solenoidal Electromagnets. Magnetic Resistance. CHAPTER VI.—Magnetic Properties of Iron. Experimental Determination of Permeability. Hopkinson's Method. Energy of Magnetization. Hysteresis. CHAPTER VII.—Induced Electromotive Force. Cutting or Threading of Lines. Value of Induced Electromotive Force. C. G. S. Unit of Resistance. Fleming's Rule. Electromotive Force of Two-Pole Armature. CHAPTER VIII.—Electromotive Force of Armature. Closed-Coil Armature. Winding. Bi-Polar Winding. Multipolar Parallel Winding. Multipolar Series Winding. Multipolar Series and Parallel Winding. CHAPTER IX.—Open-Coil Armatures. The Brush Armature. The Thomson-Houston Armature. CHAPTER X. Field Magnets. Two-Pole Fields. Multipolar Fields. Weight of Fields. Determination of Exciting Power. Predetermination of Characteristics. CHAPTER XI.—Static and Dynamic Electromotive Force. Commutation of Current. Armature Back Ampere-Turns. Dynamic Characteristic. Armature Cross Ampere-Turns. Sparkless Collection. For Contents of Chapters XII-XVIII see our new book catalogue.

Alcatraz Electrical Compound,

Manufactured by

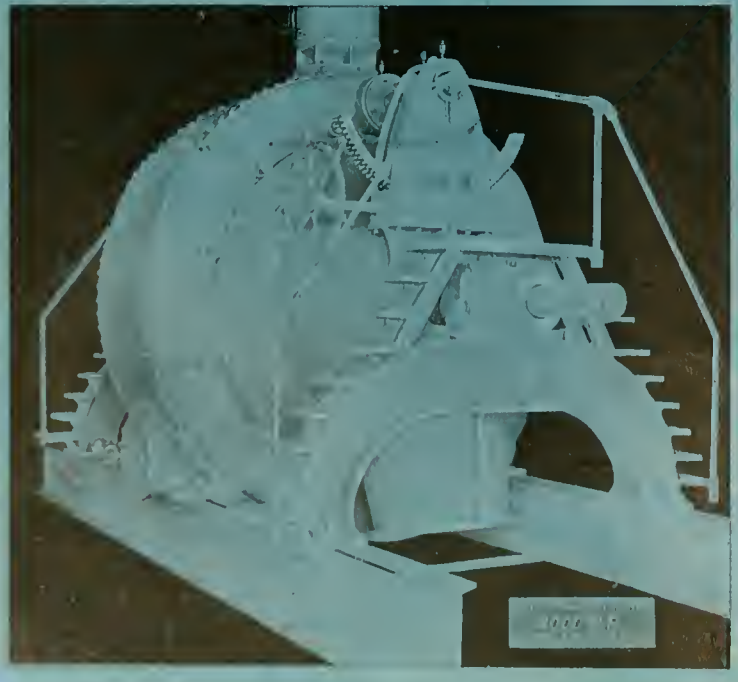
THE CALIFORNIA ASPHALT CO., 57 East 59th St., NEW YORK.

ABSOLUTELY UNEQUALED FOR

ELECTRICAL AND WIRE INSULATION, Insulating Connections, Dynamos and Motor Bases, Battery and Accumulator Shelving, Circuit and Switch-Boards.
WATER-PROOFING Cut-Out Boxes, coating wires when subjected to acid or alkaline fumes, and when laid under cement, etc.
PAINTING Poles, Brackets, Cross-Arms, Benches, Floors, etc.
COATING CABLES, Lead-Covered Pipes, and all underground work.

ALCATRAZ ELECTRICAL COMPOUND is manufactured of the celebrated brand of Alcatraz Asphalt, and possesses many well-known points of superiority. It has been tried under severe and exacting conditions, and has given perfect satisfaction. **It will not Scale, Crack or Burn. Presents a Smooth Surface. Adheres Tenaciously. Not affected by Thermal or Climatic Conditions. Resists the action of the Elements, Acids, Alkalies, Sewer Gases, and possesses great strength and elasticity.** Being the producers of the raw product, we are enabled to save the middleman's profit, and offer consumers a superior article at a very low price.

SAMPLE UPON APPLICATION. **C. P. WILLIAMS,** Sole Agent U. S. A. 39-41 Cortlandt St., New York City.



WATER WHEELS

FOR HEADS OF 3 TO 2,000 FT.

For Electric Power and Lighting Plants.

These Wheels are specially designed for, and adapted to, electrical purposes, and secure a **high guaranteed percentage** and **great steadiness** of motion, under variable loads. An **unequaled concentration** of power, and an **unprecedented high velocity.** Its **quickly operating balanced gates** afford **prompt** and **fine regulation** by governor. **Satisfaction guaranteed where others fail.**

The turbines installed by Jas. Leffel & Co. in the plant of the Niagara Falls Hydraulic Power & Manufacturing Co. are described in an article entitled "Niagara Power Transmission." Three of these wheels generate 2,200 h. p. each, under a head of 220 ft., at a speed of 250 revolutions per minute. The fourth, it is calculated, will develop 2,300 h. p., with the same head, at 300 revolutions per minute.

Write for Catalogue and state your wants.

HARDTMUTH CORED CARBONS for Direct and Alternating Current ARC LAMPS.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.

AMERICAN CARBON CO.'S Plain and Coated CARBONS FOR SERIES ARC LIGHTING.

GENERAL WESTERN AGENTS.

HABIRSHAW AND G. E. CO.'S WIRES AND CABLES.

Chicago Edison Co.,

DEALERS IN ELECTRIC LIGHTING SUPPLIES,

139 Adams Street, CHICAGO.

"ARMORITE"!

INTERIOR CONDUIT

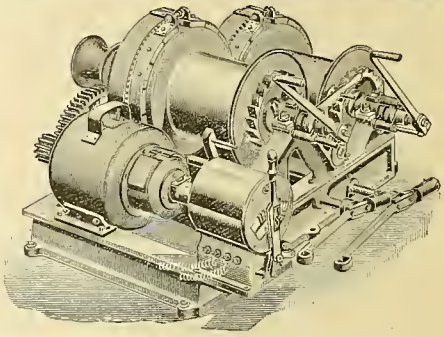
(CUMMING'S PATENTS.)

Note how the Wood-Lining does not crack.

ARMORITE INTERIOR CONDUIT CO., OFFICE AND WORKS, 478-480 FORT STREET, WEST DETROIT, MICH.

THE . . .

Storey Motors.



Iron-clad. Completely Closed In. Dust and Moisture Proof. No External Magnetism.

Specially Adapted for Direct Connection to Machinery.

Special Direct Current Motors for All Classes of Work.

THE STOREY MOTOR & TOOL CO.,

MAIN OFFICE AND FACTORY: 212-226 Carter St., Philadelphia, Pa.

CHICAGO OFFICE: Metropolitan Elec. Co., 186-188 Fifth Ave.
NEW YORK OFFICE: 136 Liberty Street.
BRANCH FACTORY: Hamilton, Canada.

We manufacture a high grade Knife Switch for switchboard work. We call it the E Switch.

A quick break switch, made in sizes from 50 amperes capacity to 800 amperes. They will be listed in our new catalog. We manufacture arc and incandescent dynamos and direct current motors. Also arc lamps.

We have in stock in our Chicago Store

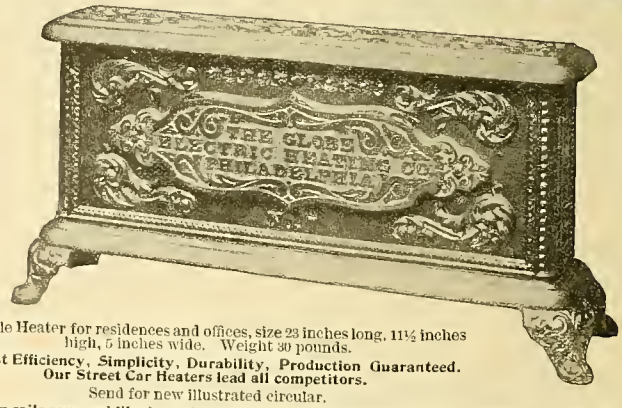
WAITING FOR YOUR ORDERS

Sockets, Switches, Cut-Outs,
Tubes and Insulators,
Shawmut Fuse Wire and Knife Switches,
Bells, Annunciators,
Batteries, Push Buttons,
Fan Motors, Electric Supplies of all Kinds.

Western Electric Company.

Chicago. New York.

ELECTRIC HEATERS AVAILABLE TO ALL. MINIMUM EXPENSE.



Portable Heater for residences and offices, size 23 inches long, 11½ inches high, 5 inches wide. Weight 30 pounds.

Highest Efficiency, Simplicity, Durability, Production Guaranteed. Our Street Car Heaters lead all competitors.

Send for new illustrated circular.

Heating coils renewed like incandescent lamps. Constructed for any voltage. Work on direct or alternating current. Consumes 6. 8 amperes on 110 volt current, 1. 5 on 500 volt current.

THE GLOBE ELECTRIC HEATING CO., 147 North 12th Street, Philadelphia, Pa.

OUR HIGH FREQUENCY

X-RAY COIL

Can be Relied Upon to Work at All Times.

Undisputed Supremacy.

WHAT OTHERS SAY MAY INTEREST YOU.

L. E. KNOTT APPARATUS CO., Boston, Mass.

Gentlemen:—The Tesla Coil which you made for me has given perfect satisfaction. I consider it superior to the Rhumkorff Coil. With it I have reproduced many of Tesla's interesting experiments. As a means of exciting Crookes tubes I have found nothing equal to it.

Ohio Wesleyan University, Delaware, Ohio.

Sincerely, (PROF.) WILL G. HORNELL.

Manufacturers of High-Grade X-Ray Apparatus, mechanically and scientifically perfect.

L. E. Knott Apparatus Co.,

Microscopic, Chemical and Physical Apparatus.

Steam Engineering and Electrical Engineering Taught by Mail.

Our *Stationary Engineers' Scholarship* includes instruction in Arithmetic, Mensuration and the Use of Letters in Algebraic Formulas, Mechanics, Mechanical Drawing, Steam and Steam Engines, Steam Boilers, Dynamos and Motors.

Besides a thorough education in the theory of Steam Engineering the instruction is designed to qualify Steam Engineers and other students to understand, operate and care for electrical machines; to instal electrical plants; to perform calculations and to locate and remedy faults.

Studies are carried on at home. No time lost from work. Specially prepared Instruction and Question Papers, superior to text-books, furnished free to students.

Also courses in Mechanics; Civil Engineering in all its branches; Book-Keeping and Business Forms and the English Branches.

A circular giving full particulars will be sent free. Mention the subject in which you are interested. Address

THE INTERNATIONAL CORRESPONDENCE SCHOOLS, Box 1002, Scranton, Pa.

We have just issued a NEW catalogue of electrical books containing 100 pages, listing every work on electricity. A copy will be cheerfully mailed on receipt of a two-cent stamp.

WATER-WHEEL GOVERNOR
THAT GOVERNS.

WATERVILLE & FAIRFIELD RAILWAY & LIGHT CO., WATERVILLE, ME., Jan. 18, 1896.

Lombard Water-Wheel Governor Co., Boston, Mass.

GENTLEMEN:—In regard to your Type C governor, which is regulating for us our two Hercules Wheels, which give power to operate our Light Plant, Street R. R. and Power Generator, we are frank to admit that the machine does its work admirably. We have no hesitancy in recommending it to those in want of a governor. (Signed)

I. C. LIBBY, President Waterville & Fairfield R. R. & L. Co.

NOTICE FOR BIDS

FOR LIGHTING CITY.

The City of Plymouth, Indiana, will receive sealed bids up to January 13th, 1897, for lighting the said city with electric light for three or five years, from February 16th, 1897. Thirty-five to forty lights with a capacity of 2,000 candles. Also rates for each additional light over forty. The city is to be indemnified against all infringements on patents. Bids to be for lighting said city until midnight and for all-night lighting. Plant to be ready for operation on or before February 16th, 1897. The city reserves the right to reject any and all bids.

THE TOWN OF CICERO.

Proposals for Street Lighting.

Sealed proposals in duplicate (said proposals to be addressed as follows: Original to the Town Clerk, duplicate to the President of the Town, to whom it must be delivered) are invited for **Lighting School District No. 1**, bounded by North Avenue, Harlem Avenue, Twelfth Street and Austin Avenue, with not less than one hundred and fifty (150) arc lights of twelve hundred (1,200) candle power each, for a period ending December 1st, 1902, in accordance with specifications on file in the Engineer's Office.

Each bid shall state whether based upon the direct or alternating current system.

Bids will be received until 7:30 p. m., December 28th, 1896.

A certified check for two thousand ($2,000) dollars must accompany each proposal.

The Board of Trustees of the town of Cicero reserves the right to reject any or all bids.

J. R. DRENT,
Town Clerk.

Austin Ill., Dec. 16th, 1896.

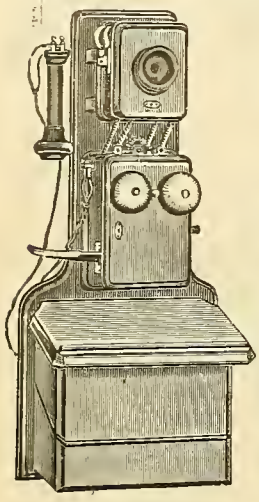
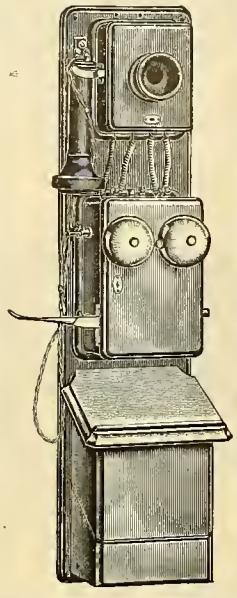
VIADUCT MFG. COMPANY



Is the **oldest** concern of the kind in this country, with one exception, manufacturing

Magneto Bells, Telephones, District Telegraph Messenger Boxes

and other appliances.



It has had 18 years' experience; 5 years as licensed manufacturer of the American Bell Telephone Company. It has made more Magneto Bells than all the other manufacturers in the country. Its standard work is known by all experienced telephone men.

The works are located at the Relay Station, Baltimore & Ohio Railroad, and run by water power.

It manufactures all of its own woodwork, as well as brass, iron, steel and everything connected with its output.

Send for new catalogue and mention this paper.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists to America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

PROGRESS THE ORDER OF THE AGE.

The New American Leads.

Recent improvements made in the New American Turbine have increased the power as per their diameter, and produced greater efficiency from whole to half water than any other turbine, as evidenced by the following, copied from certified tests made at Holyoke, Mass., on the dates named, and signed by A. F. Sickman, engineer in charge of experiments, and E. S. Waters, hydraulic engineer.

The originals of these certificates and tests of other sized wheels can be seen at our office.

Test of a 45-inch Wheel—July 9, 1894.

Gasoline Engines.

The Best and Cheapest Power for driving Dynamos. Steady Light Guaranteed. Send for Catalogue, Etc.

THE VAN DUZEN GASOLINE ENGINE CO., - CINCINNATI, OHIO.

New Dynamo Tenders' Hand-Book.

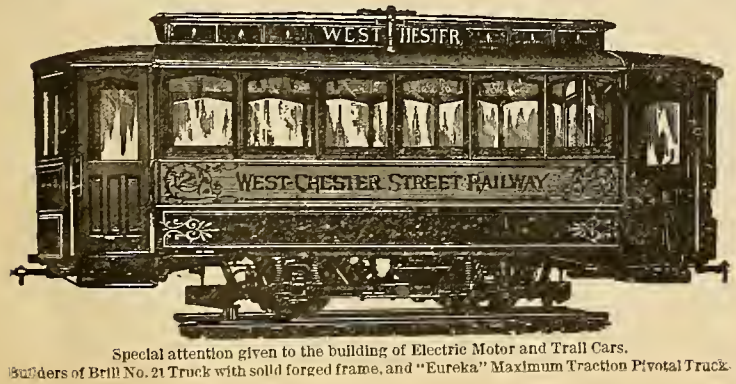
By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 5,000 of the new.

Electrician Publishing Co.,
Suite 510 Marquette Building, CHICAGO.

J. G. BRILL COMPANY, - - - PHILADELPHIA,
BUILDERS OF RAILWAY AND TRAMWAY CARS OF ALL CLASSES.



Special attention given to the building of Electric Motor and Trail Cars.
Builders of Brill No. 21 Truck with solid forged frame, and "Eureka" Maximum Traction Pivotal Truck.

Aluminum Nickel Alloy.

Manufactured by THE NATIONAL ORE & REDUCTION CO., under Letters Patent dated Sept. 18, 1891, No. 459,494.

This alloy is especially and now universally used for armor plates, gun metal, projectiles, acid pans, propeller wheels, car wheels, steel castings of any description and general foundry castings in either gray iron, malleable iron, brass, bronze and copper castings. It is used very extensively in puddling furnaces, open hearths, reverberatory furnaces and steel coovertars. Its fluidity and cleansing properties to metals, aside from its strengthening qualities, are attested by indisputable authorities.

Aluminum Nickel Alloy is reduced from twenty cents to FOUR CENTS per pound in ton or 600-lb. barrel lots. Sold under strict guaranty.

DOMESTIC
Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

INFORMATION, CAUTION AND NOTICE.

The courts of last resort in patent causes have repeatedly and recently sustained **BRUSH PATENTS FOR STORAGE BATTERIES,** Nos. 266,090 and 337,299, dated October 17, 1882, and March 2, 1886, covering broadly every practical type of storage battery plate, including not only pasted plates, but also the so-called Plante plates, in the words of **Judge Shipman** (52d Fed. 136) **"A secondary battery plate ribbed, honeycombed, studded or equivalently prepared . . . . in which the Plante process of electrical disintegration or some kindred process of forming was used."**

In the interest of the development of the storage battery business these fundamental or basic patents have been acquired at great expense by **The Electric Storage Battery Company,** and users, vendors and makers of storage batteries and storage battery plates are cautioned against their infringement.

To guard users, vendors and purchasers against inadvertent and unadvised infringement, notice is hereby given that the types of batteries and plates advertised by the following:

The Electro-Chemical Storage Battery Company,
The Willard Electric & Battery Company,
The Ohio Storage Battery Company,
Norwalk Electric & Battery Company,
The Warwick Electric Manufactnring Company,
Electric Novelty Works,
Momence Electric Ball Storage Battery Company,
Silvey Storage Battery Company (Dayton Mfg. Co.),
The Haschke Storage Battery Company,
Woodward Electrical Company,
Devere Electric Company,
D. J. Hauss,
Eclipse Electric Company,
The American Battery Company,
Samuels Dynamic Accumulator Company,
National Electric Car Lighting Company,

Are considered flagrant infringements; and further, that vendors, purchasers and users thereof will be prosecuted by injunction and otherwise according to law.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing. CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation, Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters, Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators. CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus. CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuit and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machine.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion.—CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Differences of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Forms of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments; Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X; Arc Lamps in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Descriptions; Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections; Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction; Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts; Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

Orders for above book, or any electrical work published promptly sent on receipt of price, postage prepaid.

The Holidays are Coming.

Why not make a present of an electrical book to those you desire to remember at Christmas or New Year's? Useful presents are most appreciated. Note the following:

NEW [illegible]MO TENDERS' HAND-BOOK.—By Lieut. F. B. Badt. One hundred and forty illustrations. Price $1.00. An entirely new and up-to-date work, 226 pages, flexible cloth binding, size of page 5¾ by 3½ inches. Designed for dynamo tenders, linemen, stationary and marine engineers. Just the book for men who wish to learn how to operate and care for electric light installations. The only book of the kind in the English language.

BELL [illegible]ERS' HAND-BOOK.—By Lieut. F. B. Badt. Third Edition. Eighth Thousand. One hundred and six pages, 97 illustrations. Just the book for those engaged in selling, installing or handling Electric Batteries, Electric Bells, Electric Door, House or Hotel Annunciators, Burglar or Fire Alarms, Electric Gas Lighting Apparatus, Electric Heat Regulating Apparatus, etc. The only book of its kind. Price as A, B, C. Price $1.00.

ELECTRIC TRANSMISSION HAND-BOOK.—By Lieut. F. B. Badt. First Edition. Three Thousand Copies. Ninety-six pages, twenty-two illustrations, twenty-seven original tables. Gives more practical information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers, and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants. A practical and reliable work. Price $1.00.

INCANDESCENT WIRING HAND-BOOK.—By Lieut. F. B. Badt. Profusely illustrated. Price $1.00. Type page 5½ by 4 inches; flexible cloth binding, sixty-six pages, thirty-five cuts and five tables, three of which are 12 by 18 inches. These tables give at once, and without any calculation, the size of wire required in each case for any percentage of loss. A timely book, containing full instructions for Incandescent Wiring, and complete information concerning Methods of Running Wires, Location of Safety Devices and Switches, Splices, Insulation and Testing for Faults, Wire Gauges, General Electrical Data, Calculating Sizes of Wires, Wiring of Fixtures, Elevators, Buildings, Isolated and Central Station Plants. The only complete book of the kind published.

DEFINITION OF PRACTICAL ELECTRICAL UNITS.—By F. B. Badt and Prof. H. S. Carhart. Price, postage paid, 75 cents. This is a very handsome book of eighty pages, printed on fine, heavy paper, with neat cloth binding. It contains Portraits and Biographies of Ohm, Watt, Faraday, Joule, Gauss, Weber, Sir William Siemens, Dr. Werner von Siemens, Volta, Ampere, Daniell and von Jacobi, together with a carefully prepared table of Practical Electrical Units, with their relative values. In no other single volume can this rare collection of portraits be found.

THE TELEPHONE HAND-BOOK.—By Herbert Laws Webb. One hundred and forty-six pages, 138 illustrations, cloth, hand-book size, price $1.00. Extract from Preface: "This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the Telephone Hand-Book is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country." No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-books which have been so favorably received by the entire electrical fraternity.

THE BOOK YOU WANT.

DESMOND, CHAS.—Electricity for Engineers, Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Alternate Current Apparata. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised Edition. 12mo, cloth, Chicago, 1893. $2.50.

BUCKLEY, W. J.—Electric Lighting Plants, their cost and operation. Two hundred and seventy-five pages, many illustrations and diagrams, cloth, 1894, $2.00; paper $1.00. The purpose of this work is to give to intending purchasers of lighting plants such details as may aid them in forming a fair estimate of the cost of construction and operation of a proposed plant. Data compiled from station reports of electric lighting plants employing overhead circuits, with suggestions pertaining to the information usually desired by the non-technical purchaser.

CROSBY, O. T., AND DR. LOUIS BELL.—The Electric Railway in Theory and Practice. A complete treatise on the construction and operation of electric railways. Second Edition, revised and enlarged. One hundred and eighty-three illustrations, 8vo. cloth, New York. 1892, $2.50. In this work will be found a full discussion of the principles, apparatus and methods of construction employed in electric railroading. The treatment of the subject is thoroughly practical, and will recommend itself alike to the electrical engineer, the student and the electric railway manager.

LOCKWOOD.—Electricity, Magnetism and Electric Telegraphy. A practical guide and hand-book of general information for electrical students, operators and inspectors. Three hundred and seventy-six pages, 152 illustrations, $2.50.

THOMPSON.—Dynamo-Electric Machinery. A text-book for students of electro-technics. Fourth Edition. Rewritten and revised. About 1,000 pages, fully illustrated, 39 plates. $6.00.

A DICTIONARY OF ELECTRIC WORDS, TERMS AND PHRASES.—By Prof. E. J. Houston. Third Edition, Revised and Enlarged. One volume, octavo, 750 pages, illustrated, cloth. Price $5.00. The new edition contains over 5,000 terms and 75 new illustrations. Concise definitions of electrical terms in general use, illustrated descriptions of electrical apparatus, and clear explanations of electrical phenomena. A work needed in every scientific library and an invaluable reference book to both students and professional men. One of the features of the dictionary is that it is not a mere word-book. The words, terms and phrases are invariably followed by a short, concise definition, giving the sense in which they are correctly employed.

ELECTRICITY AND MAGNETISM.—A series of thirty-four lessons, covering the science of electricity from its fundamental principles to its everyday practical application. Comprises 34 lessons, 325 pages, over 300 diagrams and illustrations. $2.00. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony of New York; Prof. Brown Ayres, Tulane University, New Orleans; Prof. A. C. Perrine, Leland Stanford University, California; Prof. Geo. D. Shepardson, University of Minnesota, and others. A comprehensive treatise in simple language, free from algebraic equations and easily understood. Table of Contents: 1. The nature and properties of electricity. 2. Machines for generating electricity by friction and by electric induction. 3. Electric batteries or appliances for generating electricity by chemical action. 4. Electric batteries, or appliances for generating electricity by chemical action (concluded). 5. The nature and properties of magnetism, magnetic fields. 6. The magnetic effects of electric currents, and magnetic circuits. 7. Ohm's law of the flow of electricity. 8. Heating effects of electric currents. Miscellaneous effects of electric currents. 9. Galvanometers and voltameters. 10. Measurement of electrical resistance. 11. Every-day measurements of electric currents and pressures. 12. Every-day measurements of electric power. Condensers and the measurement of their capacity. 13. Electrolytic deposition of metals. 14. The electric telegraph. 15. Multiple telegraphy. 16. The telephone. 17. The construction of telegraph and telephone lines and instruments. 18. Testing lines for insulation and conductivity and the location of leaks and breaks. 19. Principles of continuous current dynamos and motors. 20. Principles of continuous current dynamos and motors, their construction, care and attendance. 21. Arc lighting and arc light machinery. 22. Incandescent lighting and power transmission, two, three and five wire systems of distribution for electric lights and motors. 23. Construction of electric light and power circuits, and their testing. 24. Testing electric light circuits, and the distribution and measurement of light. 25. Electro-magnetic induction. 26. Alternating currents. 27. Alternating currents and alternating current machinery (concluded). 28. Miscellaneous applications of electric motors. 29. Electric railways. 30. Methods of handling and controlling railway motors and generators. 31. Model electric plants. 32. Underwriters' rules, etc. 33. Electric welding, forging, etc., electricity applied to the kitchen. 34. Electro-therapeutics.
